Embedded Linux Hardware Software And Interfacing:

Embedded Linux Craig Hollabaugh, 2002 A guide to using Linux on embedded platforms for interfacing to the real world Embedded Linux is one of the first books available that teaches readers development and implementation of interfacing applications on an Embedded Linux platform

Embedded Linux Craig Hollabaugh, 2002 Linux Appliance Design Bob Smith, John Hardin, Graham Phillips, Bill Pierce, 2007 While there are books that tell readers how to run Linux on embedded hardware and books on how to build a Linux application this volume is the first book to demonstrate how to merge the two to create a Linux appliance

Embedded Systems Design with Platform FPGAs Ronald Sass, Andrew G. Schmidt, 2010-09-10 Embedded Systems Design with Platform FPGAs introduces professional engineers and students alike to system development using Platform FPGAs The focus is on embedded systems but it also serves as a general guide to building custom computing systems The text describes the fundamental technology in terms of hardware software and a set of principles to guide the development of Platform FPGA systems The goal is to show how to systematically and creatively apply these principles to the construction of application specific embedded system architectures There is a strong focus on using free and open source software to increase productivity Each chapter is organized into two parts The white pages describe concepts principles and general knowledge The gray pages provide a technical rendition of the main issues of the chapter and show the concepts applied in practice This includes step by step details for a specific development board and tool chain so that the reader can carry out the same steps on their own Rather than try to demonstrate the concepts on a broad set of tools and boards the text uses a single set of tools Xilinx Platform Studio Linux and GNU throughout and uses a single developer board Xilinx ML 510 for the examples Explains how to use the Platform FPGA to meet complex design requirements and improve product performance Presents both fundamental concepts together with pragmatic step by step instructions for building a system on a Platform FPGA Includes detailed case studies extended real world examples and lab exercises

Schaumont, 2010-09-09 This is a practical book for computer engineers who want to understand or implement hardware software systems It focuses on problems that require one to combine hardware design with software design such problems can be solved with hardware software codesign When used properly hardware software co sign works better than hardware design or software design alone it can improve the overall performance of digital systems and it can shorten their design time Hardware software codesign can help a designer to make trade offs between the exibility and the performance of a digital system To achieve this a designer needs to combine two radically different ways of design the sequential way of dec position in time using software with the parallel way of decomposition in space using hardware Intended Audience This book assumes that you have a basic understanding of hardware that you are miliar with standard digital hardware componentssuch as registers logic gates and components such as multiplexers and arithmetic operators The book also assumes that you know how to write a program in C These topics are usually covered in an introductory course on computer engineering or in a combination of courses on digital design and software engineering Smart Card Research and Advanced Applications Thomas Eisenbarth, Yannick Teglia, 2018-01-24 This book constitutes the thoroughly refereed post conference proceedings of the 16th International Conference on Smart Card Research and Advanced Applications CARDIS 2017 held in Lugano Switzerland in November 2017 The 14 revised full papers presented together with 2 abstracts of invited talks in this book were carefully reviewed and selected from 48 submissions CARDIS has provided a space for security experts from industry and academia to exchange on security of smart cards and related applications **Embedded Software Design and Programming of Multiprocessor System-on-Chip** Katalin Popovici, Frédéric Rousseau, Ahmed A. Jerraya, Marilyn Wolf, 2010-03-03 Current multimedia and telecom applications require complex heterogeneous multiprocessor system on chip MPSoC architectures with specific communication

infrastructure in order to achieve the required performance Heterogeneous MPSoC includes different types of processing units DSP microcontroller ASIP and different communication schemes fast links non standard memory organization and access Programming an MPSoC requires the generation of efficient software running on MPSoC from a high level environment by using the characteristics of the architecture This task is known to be tedious and error prone because it requires a combination of high level programming environments with low level software design This book gives an overview of concepts related to embedded software design for MPSoC It details a full software design approach allowing systematic high level mapping of software applications on heterogeneous MPSoC This approach is based on gradual refinement of hardware software interfaces and simulation models allowing to validate the software at different abstraction levels This book combines Simulink for high level programming and SystemC for the low level software development This approach is illustrated with multiple examples of application software and MPSoC architectures that can be used for deep understanding of software design for MPSoC **Software Development** ,2006 *Applications of Specification and Design Languages for SoCs* A. Vachoux,2006-10-06 This book includes a selection of the best contributions to the Forum on Specification and Design Languages held in 2005 FDL 05 It provides detailed insights into recent works dealing with a large spectrum of issues in system on chip design All the chapters have been carefully revised and extended to offer up to date information They also provide seeds for further researches and developments in the field of heterogeneous systems on chip design
