Real-Time C++ Christopher Kormanyos,2018-05-02 With this book Christopher Kormanyos delivers a highly practical guide to programming real time embedded microcontroller systems in C It is divided into three parts plus several appendices Part I provides a foundation for real time C by covering

language technologies including object oriented methods template programming and optimization Next part II presents detailed descriptions of a variety of C components that are widely used in microcontroller programming It details some of C's most powerful language elements such as class types templates and the STL to develop components for microcontroller register access low level drivers custom memory management embedded containers multitasking etc Finally part III describes mathematical methods and generic utilities that can be employed to solve recurring problems in real time C The appendices include a brief C language tutorial information on the real time C development environment and instructions for building GNU GCC cross compilers and a microcontroller circuit For this third edition the most recent specification of C 17 in ISO IEC 14882 2017 is used throughout the text Several sections on new C 17 functionality have been added and various others reworked to reflect changes in the standard Also several new sample projects are introduced and existing ones extended and various user suggestions have been incorporated To facilitate portability no libraries other than those specified in the language standard itself are used Efficiency is always in focus and numerous examples are backed up with real time performance measurements and size analyses that quantify the true costs of the code down to the very last byte and microsecond The target audience of this book mainly consists of students and professionals interested in real time C Readers should be familiar with C or another programming language and will benefit most if they have had some previous experience with microcontroller electronics and the performance and size issues prevalent in embedded systems programming
