Catherine D'Andrea,2011 Archaeobotany has significantly increased our knowledge of the relationships between humans and plants throughout the ages As is amply illustrated in this volume botanical remains preserved in archaeological contexts have great potential to inform us about past environments and the various methods used by ancient peoples to exploit and cultivate plants This volume presents the

proceedings of the 6th International Workshop on African Archaeobotany IWAA held at Helwan University in Cairo Egypt on 13-15 June 2009. Studies presented herein clearly illustrate that African archaeobotany is a dynamic field with many advances in techniques and important case studies presented since the first meeting of IWAA held in 1994. Authors have employed classical and new archaeobotanical techniques in addition to linguistics and ethnoarchaeology to increase our knowledge about the role of plants in ancient African societies. This book covers a wide range of African countries including Egypt, Ethiopia, Libya, Nigeria, South Africa, and the Canary Islands. It is of interest to archaeobotanists, archaeologists, historians, linguists, agronomists, and plant ecologists.

Myths, State Expansion, and the Birth of Globalization J. Carlson, 2011-12-15. Many of the present problems of globalization are mirrored in the historical expansion of the European state system. This title is a structured comparative case study analysis of four regions and examines how these regions and their peoples were absorbed into the expanding European centered state system from roughly the 1400s through to 1800.

The Economics of Climate-Resilient Development Sam Fankhauser, Thomas K.J. McDermott, 2016-07-27. Some climate change is now inevitable and strategies to adapt to these changes are quickly developing. The question is particularly paramount for low income countries which are likely to be most affected. This timely and unique book takes an integrated look at the twin challenges of climate change and development. The book treats adaptation to climate change as an issue of climate resilient development rather than as a bespoke set of activities: flood defences, drought plans, and so on, combining climate and development challenges into a single strategy. It asks how the standard approaches to development need to change and what socio-economic trends and urbanisation mean for the vulnerability of developing countries to climate risks. Combining conceptual thinking with practical policy prescriptions and experience, the contributors argue that to address these questions, climate risk has to be embedded fully into wider development strategies.
