

## GPS 4: Subtracting Signed Numbers

In the last section we increased our understanding of addition of signed numbers. Using what we learned about addition, we can also perform subtraction. It all comes down to this one fact.

### Subtraction

To subtract  $b$  from  $a$ , add the opposite of  $b$  to  $a$ .

$$a - b = a + (-b)$$

This is a different interpretation of subtraction than you might customarily think about. Instead of thinking about subtraction as “taking away” or “removing”, we think of it as adding the opposite. We need to know how to find the opposite. Simply put, the opposite of a positive number is the negative number of the same magnitude, and the opposite of a negative number is the positive number with the same magnitude.

### Problem 4.1

- 1) The opposite of 3 is  $-3$ .
- 3) The opposite of  $-5$  is 5.

- 2) The opposite of 2 is  $-2$ .
- 4) The opposite of  $-7$  is 7.

### Problem 4.2

- 1) The opposite of 50 is \_\_\_\_\_.
- 3) The opposite of 12 is \_\_\_\_\_.

- 2) The opposite of  $-3$  is \_\_\_\_\_.
- 4) The opposite of  $-16$  is \_\_\_\_\_.

### Subtraction of Two Signed Numbers

Now we will apply these ideas to subtraction.

|                                                             | Problem 4.3     | Problem 4.4    |
|-------------------------------------------------------------|-----------------|----------------|
|                                                             | $4 - 9$         | $6 - (-8)$     |
| Rewrite the problem without changing it.                    | $(+4) - (+9)$   | $(+6) - (-8)$  |
| Do both of these steps at once:                             |                 |                |
| 1) Change the operation to addition.                        | $(+4) + (-9)$   | $(+6) + (+8)$  |
| 2) Change the second number to its opposite.                |                 |                |
| Calculate the answer as we learned in the previous section. | $-5$            | $14$           |
|                                                             | Problem 4.5     | Problem 4.6    |
|                                                             | $-24 - 18$      | $-15 - (-9)$   |
| Rewrite the problem without changing it.                    | $(-24) - (+18)$ | $(-15) - (-9)$ |
| Do both of these steps at once:                             |                 |                |
| 1) Change the operation to addition.                        | $(-24) + (-18)$ | $(-15) + (+9)$ |
| 2) Change the second number to its opposite.                |                 |                |
