Basic Economics for Conservative Democrats Lyndon LaRouche, As I spell the point out in the main text of this book a sound national economic policy in the tradition of Alexander Hamilton enables us to simultaneously increase profits and wages This can be accomplished in only one way It is accomplished by transforming scientific and technological advances into what Hamilton termed artificial labor machines which use sources of energy above and beyond the energy of the human musculature In the overall life of our nation or any nation for that matter neither business nor labor can prosper without a policy of promoting technological progress through the means of improved investment in productive capital Once business and labor recognize that they both have the same overall fundamental national economic policy interest in common that understanding establishes a mass electoral basis of support for the kinds of policies which business farmers and labor as a whole rightly demand

Comparative Economic Theory Masudul Alam Choudhury, 2013-03-14 Comparative Economic Theory Occidental and Islamic Perspectives seeks first to elucidate the nature and methodology of Islamic political economy as a process oriented social economy guided by its cardinal epistemology of Oneness of God Divine Unity From this premise is then derived the episteme of unification of knowledge upon which is developed the methodological content of an extremely interactive integrative and revolutionary world view of political economy and a meta theory of the socio scientific order Secondly while laying out the building blocks of Islamic political economy and its much wider methodological implication for the socio scientific order this book offers a comparative study of occidental thought in the same areas Thirdly topics of microeconomics and macroeconomic theory are covered This book concludes with chapters on methodology and an analytical postscript to show how the interactive integrative and evolutionary world view of knowledge induced systems described by the Islamic political economy presents new visions of scientific thinking

in the Social Sciences Robert S. Cohen,Ingeborg K. Helling,2014-05-19 This volume contains the English translation of Felix Kaufmann's 1895-1945 main work *Methodenlehre der Sozialwissenschaften* 1936 In this book Kaufmann develops a general theory of knowledge of the social sciences in his role as a cross border commuter between Husserl's phenomenology Kelsen's pure theory of law and the logical positivism of the Vienna Circle This multilayered inquiry connects the value oriented reflections of a general philosophy of science with the specificity of the methods and theories of the social sciences as opposed to abstract natural science and psychology The core focus of the study is the attempt to elucidate how and under what conditions scientific knowledge about social facts empirically justified and theoretically embedded can be obtained The empirical basis of knowledge within the social sciences forms a phenomenological concept of experience According to Kaufmann this concept of experience exhibits a complex structure Within the meaning interpretation of human action as the core of knowledge in the social sciences this structure reaches out across the isolated act of verification toward the synthesis of external and internal experiences The book opens with a detailed and useful introduction by Ingeborg K Helling which introduces the historical and theoretical background of Kaufmann's study and specifically illuminates his relation to Alfred Schütz and John Dewey Finally it contains interviews with and letters to members of his family colleagues and students
