J. Alhabeeb, L. J. Moffitt, 2012-11-05 Uncertainty is present in every managerial decision and Managerial Economics A Mathematical Approach effectively demonstrates the application of higher level statistical tools to inform and clarify the logic of problem solving in a managerial environment While illuminating managerial decision making from all possible angles this book equips readers with the tools and skills needed to recognize and address uncertainty The book also explores individual firm and market level decisions discusses all possible risks and uncertainties encountered in the decision making process and prepares readers to deal with both epistemic and aleatory uncertainty in managerial decisions Managerial Economics features An emphasis on practical application through real life examples and problems An accessible writing style that presents technical theories in a user friendly way A mathematical and statistical point of view that reveals the presence of uncertainty inherent in managerial decisions Thoroughly class tested material including problems at the end of each chapter case study questions review exercises and objectives that summarize the main discussions Managerial Economics is an excellent book for upper undergraduate and graduate level courses in business and economics departments The book is also an ideal reference and resource for managers decision makers market analysts and researchers who require information about the theoretical and quantitative aspects of the topic The Theory of Economic Personality Taner Güney, 2023-12-19 Do individuals have an economic personality Is there a model for real life human economic behavior Can real life economic behaviors be predicted This book identifies the theory of economic personality Economic personality leads an individual to exhibit predictable behaviors without the need to be rational in cases of uncertainty So this book argues that the individual is not rational what is rational however is the systematic repetition of behaviors dictated by people s economic personalities Understanding Economic Behaviour Klaus Günter Grunert, Folke Ölander, 2012-12-06 may be related to another basic assumption in economic psychology that the human capacity to process information from the environment is limited and that the kind of

optimal use of that information postulated in many economic theories is therefore not possible The research methods used are mainly geared towards empirical research and there mostly towards survey research and experimentation Experimentation involves most often simulated behaviour in a laboratory which allows the experimental manipulation of possible causes of behaviour which would not be possible in real life Survey research is the most widely used instrument for investigating real world behaviour with all its caveats about establishing causal explanations Several introductory books e g Fumham Lea Tarpy van Raaij van Veldhoven Wiswede 1988 have appeared recently which try to give an overview of the field of economic psychology and which in varying degrees demonstrate the three foundations of economic psychology just mentioned Others have concentrated on certain subtopics such as the psychology of the labour market e g Baxter 1988 Pelzmann 1986

Multiple Criteria Decision Making Theory and Application G. Fandel, T. Gal, 2012-12-06 He consider a cone dominance problem given a preference cone LP and a set $n \times R$ of available or feasible alternatives the problem is to identify the non dominated elements of X The nonzero elements of LP are assumed to model the dominance structure of the problem so that $y \in X$ dominates $x \in X$ if $y \geq x + p$ for some nonzero $p \in LP$ Consequently $x \in X$ is nondominated if and only if $x \in LP \cap X \times \{1\}$ He will also refer to nondominated points as efficient points in X with respect to LP and we will let $EF(X, LP)$ denote the set of such efficient points This cone dominance problem draws its roots from two separate but related origins The first of these is multi attribute decision making in which the elements of the set X are endowed with various attributes each to be maximized or minimized
