has been in the First place to include a larger amount of modern science than is found in the text books which are generally accessible to those who are commencing the study of Natural Philosophy and at the same time to give as much of conciseness and clearness to the different branches of the science as was consistent with their nature and importance and in the Second place to prepare a text book which should be a medium between the larger works and those generally used in our academies and higher institutions The following are the principal features of the work At the head of each section an analysis is given in the form of propositions in order that the student may have a general view of what the section contains The advantage of this the author has found by long experience to be very great as it fixes in the memory the leading and fundamental principles of the science and habituates the mind to analyze and systematize the various topics which may come under review Another feature of the work is the introduction of examples in the form of problems in order to render each principle familiar and to enable the student to make a practical application of his knowledge About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
