Deriving Coordinate Symmetries John R. te Velde, 2006-01-18 This monograph proposes a minimalist phase based approach to the derivation of coordinate structures utilizing the operations Copy and Match to account for both the symmetries and asymmetries of coordination Data are drawn primarily from English German and Dutch The basic assumptions are that all coordinate structures are symmetric to some degree in contrast to parasitic gap and many verb

phrase ellipsis constructions and these symmetries especially with ellipsis allow syntactic derivations to utilize Copy and Match in interface with active memory for economizing with gaps and assuring clarity of interpretation With derivations operating at the feature level troublesome properties of coordinate structures such as cross categorial and non constituent coordination violations of the Coordinate Structure Constraint as well as coordinate ellipsis Gapping RNR Left Edge Ellipsis are accounted for without separate mechanisms or conditions applicable only to coordinate structures The proposal provides support for central assumptions about the structure of West Germanic

Discourse-oriented Syntax Josef Bayer,Roland Hinterhölzl,Andreas Trotzke,2015-12-15 Until recently little attention has been paid within syntax to components of discourse meaning that go beyond information structure and fall into the domain of non at issue meaning operating at the level of illocutionary force To approach this domain many of the contributions of this volume deal with the syntax of discourse particles However the issue of how to account for discourse particles within a more explicit map of the illocutionary domain is a good starting point for considering further phenomena related to the syntax of speech acts By focusing on speech act related particles and or meaning domains this volume makes a new contribution to the field as existing collections either do not offer a comparatively narrow focus on particles or are not limited to syntax oriented approaches The primary audience of this volume are researchers and graduate students interested in state of the art approaches to the syntax discourse interface within the cartographic approach to syntax

diverse languages with some studies drawing on dialectal acquisitional and diachronic evidence Set against this rich empirical background the contributions address an equally wide range of theoretical issues
