**EMC of Analog Integrated Circuits** Jean-Michel Redouté, Michiel Steyaert, 2009-10-10 Environmental electromagnetic pollution has drastically increased over the last decades The omnipresence of communication systems various electronic appliances and the use of ever increasing frequencies all contribute to a noisy electromagnetic environment which acts detrimentally on sensitive electronic equipment Integrated circuits must be able to operate satisfactorily while cohabiting harmoniously in the same appliance and not generate intolerable levels of electromagnetic emission while maintaining a sound immunity to potential electromagnetic disturbances analog integrated circuits are in particular more easily disturbed than their digital counterparts since they don't have the benefit of dealing with predefined levels ensuring an innate immunity to disturbances The objective of the research domain presented in EMC of Analog Integrated Circuits is to improve the electromagnetic immunity of considered analog integrated circuits so that they start to fail at relevantly higher conduction levels than before
