

# **HEART SOUNDS**

Heart sounds are the sounds produced by the mechanical activities of the heart during each cardiac cycle. Generally, heart sounds are produced by:

- Flow of blood through the chambers of the heart
- Contraction of cardiac muscle
- Closure of valves of the heart.

The heart sounds are heard by placing the ear over the chest or by using a stethoscope or microphone. These sounds are also recorded graphically. Four heart sounds are produced during each cardiac cycle. The first and second heart sounds are called classical heart sounds. These sounds are more prominent and resemble the spoken words LUB (or LUBB) and DUB (or DUP) respectively. These two heart sounds are heard by using the stethoscope. The study of heart sounds has important diagnostic value in clinical practice because the alteration in the heart sounds indicates the cardiac diseases involving the valves of the heart.

## DIFFERENT HEART SOUNDS

**FIRST HEART SOUND:** First heart sound is heard during isometric contraction period and earlier part of ejection period. The major cause for first heart sound is
