The Worldwide List of Alternative Theories and Critics Jean de Climont, 2020-11-01 This Worldwide List of Alternative Theories and Critics only available in English language includes scientists involved in scientific fields The 2023 issue of this directory includes the scientists found in the Internet The scientists of the directory are only those involved in physics natural philosophy The list includes 9700 names of scientists doctors or diploma engineers for more than 70% Their position is shortly presented together with their proposed alternative theory when applicable There are nearly 3500 authors of such theories all amazingly very different from one another The main categories of theories are presented in an other book of Jean de Climont **THE ALTERNATIVE THEORIES** *Einstein's Solution: 99 Years and Change* Robert D. Tieman, 2004-06-01 Have you ever wondered what the experts don't tell you about Albert Einstein's theories of relativity Einstein's theories are presently explained in terms of complicated calculus and space time diagrams Brehme and Minkowski To the casual enthusiast this hinders understanding and evaluation Originally Einstein's theories were derived algebraically These fundamental relations were then generalized for non fundamental applications with the use of calculus and space time diagrams What we are taught today is not what was originally conceived I have stripped away all the generalization and delved into the heart of relativity as well as its true fundamental origins I then rebuild these theories based upon the basic properties of nature that are currently accepted as true The reader will see every detail explained the way it should have been originally The final determination is left up to you **Einstein's Cosmos** Michio Kaku, 2010-03-01 A fresh and highly visual tour through Einstein's astonishing legacy Brian Greene There's no better short book that explains just what Einstein did than Einstein's Cosmos Keying Einstein's crucial discoveries to the simple mental images that inspired them Michio Kaku finds a revealing new way to discuss his ideas and delivers an appealing and always accessible introduction to Einstein's work **100 Years of Chronogeometrodynamics: The Status of the Einstein's Theory of Gravitation in Its Centennial Year** Lorenzo Iorio, Elias C. Vagenas, 2018-07-10 This book is a printed edition of the Special Issue 100 Years of Chronogeometrodynamics the Status of the Einstein's Theory of Gravitation in Its Centennial Year that was published in Universe **Einstein and the Changing Worldviews of Physics** Christoph Lehner, Jürgen Renn, Matthias Schemmel, 2012-02-02 This volume reviews conceptual conflicts at the foundations of physics now and in the past century The focus is on the conditions and consequences of Einstein's pathbreaking achievements that sealed the decline of the classical notions of space time radiation and matter and resulted in the theory of relativity Particular attention is paid to the implications of conceptual conflicts for scientific views of the world at large thus providing the basis for a comparison of the demise of the mechanical worldview at the turn of the 20th century with the challenges presented by cosmology at the turn of the 21st century Throughout the work Einstein's contributions are not seen in isolation but instead set into the wider intellectual context of dealing with the problem of gravitation in the twilight of classical physics the investigation of the

historical development is carried out with a number of epistemological questions in mind concerning in particular the transformation process of knowledge associated with the changing worldviews of physics

The Ninth Marcel Grossman Meeting (MGIXMM) Robert T. Jantzen, Remo Ruffini, Vahe G. Gurzadyan, 2002-12-01 In 1975 the Marcel Grossmann Meetings were established by Remo Ruffini and Abdus Salam to provide a forum for discussion of recent advances in gravitation general relativity and relativistic field theories In these meetings which are held once every three years every aspect of research is emphasized mathematical foundations physical predictions and numerical and experimental investigations The major objective of these meetings is to facilitate exchange among scientists so as to deepen our understanding of the structure of space time and to review the status of both the ground based and the space based experiments aimed at testing the theory of gravitation The Marcel Grossmann Meetings have grown under the guidance of an International Organizing Committee and a large International Coordinating Committee The first two meetings MG1 and MG2 were held in Trieste 1975 1979 A most memorable MG3 1982 was held in Shanghai and represented the first truly international scientific meeting in China after the so called Cultural Revolution Three years later MG4 was held in Rome 1985 It was at MG4 that astroparticle physics was born MGIXMM was organized by the International Organizing Committee composed of D Blair Y Choquet Bruhat D Christodoulou T Damour J Ehlers F Everitt Fang Li Zhi S Hawking Y Ne eman R Ruffini chair H Sato R Sunyaev and S Weinberg Essential to the organization was an International Coordinating Committee of 135 members from scientific institutions of 54 countries MGIXMM was attended by 997 scientists of 69 nationalities It took place on 2 8 July 2000 at the University of Rome Italy The scientific programs included 60 plenary and review talks as well as talks in 88 parallel sessions The three volumes of the proceedings of MGIXMM present a rather authoritative view of relativistic astrophysics which is becoming one of the priorities in scientific endeavour The papers appearing in these volumes cover all aspects of gravitation from mathematical issues to recent observations and experiments Their intention is to give a complete picture of our current understanding of gravitational theory at the turn of the millennium The Marcel Grossmann Individual Awards for this meeting were presented to Cecille and Bryce DeWitt Riccardo Giacconi and Roger Penrose while the Institutional Award went to the Solvay Institute accepted on behalf of the Institute by Jacques Solvay and Ilya Prigogine The acceptance speeches are also included in the proceedings

The Math of Body, Soul, and the Universe Norbert Schwarzer, 2022-12-27 The great German mathematician David

Hilbert's creation de facto was not a theory of everything or world formula even though he himself had little chance of fully realizing this. Even in physics where we can now show that Hilbert's fundamental equation covers both great theories General Theory of Relativity and Quantum Theory the time was not ripe for such a discovery simply because the mathematical apparatus of Quantum Theory was not fully developed then. While Hilbert brought out his great work in 1915 and knew about the Einstein field equations at the time the basic quantum equations such as the Schrödinger Klein Gordon and Dirac equations would not follow before the second half of the 1920s. In order to find the mathematical and physical fundament for the description of the body the soul and the whole universe which is to say a theory of everything we think that we require quantum gravity. That such a theory in principle already exists and was derived by Hilbert and elaborated in the author's previous work *The World Formula*. A Late Recognition of David Hilbert's Stroke of Genius. This book digs deeper and shows not only that quantum gravity is more than just a physical theory describing physical aspects but also that in fact it covers it all.

30 Years Of The Landau Institute - Selected Papers Isaak M Khalatnikov, Vladimir P Mineev, 1996-08-15 The Landau Institute for Theoretical Physics was created in 1965 by a group of LD Landau's pupils. Very soon it was widely recognized as one of the world's leading centers in theoretical physics. According to Science Magazine the Institute in the eighties had the highest citation index among all the scientific organizations in the former Soviet Union. This collection of the best papers of the Institute reflects the development of the many directions in the exact sciences during the last 30 years. The reader can find the original formulations of well known notions in condensed matter theory quantum field theory mathematical physics and astrophysics which were introduced by members of the Landau Institute. The following are some of the achievements described in this book: monopoles A Polyakov instantons A Belavin et al weak crystallization S Brazovskii spin superfluidity I Fomin finite band potentials S Novikov and paraconductivity A Larkin L Aslamasov.

The Experimenter's A-Z of Mathematics Steve Humble, 2017-09-08 Mathematics at all levels is about the joy in the discovery it's about finding things out. This fascinating book is a guide to that discovery process presenting ideas for practical classroom based experiments and extension activities. Each experiment is based on the work of a key mathematician who has shaped the way that the subject looks today and there are historical notes to help teachers bring this work to life. The book includes instructions on how to recreate the experiments using practical mathematics computer programs and graphical calculators ideas for follow up work background information for teachers on the mathematics involved and links to the new secondary numeracy strategy framework. Accompanying the book is a CD ROM with downloadable computer programs that can be used and reworked as part of the experimental process. With a wide range of topics covered and plenty of scope for interesting follow up activities the book will be a valuable tool for mathematics teachers looking to extend the curriculum.
