*The Encyclopedia of Best Films* Jay Robert Nash, 2019-10-23 This all inclusive A Z encyclopedia by one of the world's foremost experts on cinema provides comprehensive annotations of the best films produced from 1914 on. The work offers more than 5 000 three to five star entries: three stars good, four stars excellent, five stars masterpiece, and yes, author Jay Robert Nash has viewed every single one of them as well as many more that did not make the cut. In addition to a precis, each film's entry also includes a listing of the cast as well as the key principles involved in production from the director to the hair stylist. Especially unique to this book is a rating system that helps parents determine whether or not a film is appropriate for their children. Unlike the industry rating system which can be influenced by studio lobbying, Nash objectively evaluates each film and confers upon it one of four recommendations for viewing: recommended, acceptable, cautionary, and unacceptable. Backmatter includes a list of top films by genre, i.e. animated, drama, sports, mystery, adventure, etc., as well as an annotated name index listing all persons mentioned along with their dates of birth and death. Rounding out this essential volume for the film buff are over 500 still photos from the author's private collection.

*DESIGN AND ANALYSIS OF ALGORITHMS, 2nd Ed* PANNEERSELVAM, R., 2016 This highly structured text in its second edition provides comprehensive coverage of design techniques of algorithms. It traces the complete development of various algorithms in a stepwise approach followed by their pseudo codes to build an understanding of their applications in practice. With clear explanations, the textbook intends to be much more comprehensive than other books on design and analysis of algorithms. Commencing with the introduction, the book gives a detailed account of graphs and data structure. It then elaborately discusses the matrix algorithms, basic algorithms, network algorithms, sorting algorithms, backtracking algorithms, and search algorithms. The text also focuses on the heuristics, dynamic programming, and meta heuristics. The concepts of cryptography and probabilistic algorithms have been described in detail. Finally, the book brings out the underlying concepts of benchmarking of algorithms, algorithms to schedule processors, and complexity of algorithms. New to the second Edition: New chapters on Matrix algorithms, Basic algorithms, Backtracking algorithms, Complexity of algorithms. Several new sections including asymptotic notation, amortized analysis, recurrences, balanced trees, skip list, disjoint sets, maximal flow algorithm, parsort, radix sort, selection sort, topological sorting, ordering, median, and ordered statistics. Huffman coding algorithm, transportation problem, heuristics for scheduling, etc., have been incorporated into the text.
