Rexlin Jose B. William Dharma Raja, **Pursuing Instructional Effectiveness in Higher Education** Edwin George Ralph, 2004 The title of this book has two meanings One meaning expresses a sense of relief that during the last several years post secondary institutions have begun to pay serious attention to the enhancement of instruction on their campuses There has been an emergence of new organisations associations conferences seminars and workshops a proliferation of books journals and articles an expansion of research and investigative inquiry and a growth of interest among post secondary faculty members and administrators all of which are devoted to various aspects of the improvement of both teaching and learning at the undergraduate level These initiatives have combined to furnish undeniable evidence attesting to the pursuit of better teaching and learning in higher education Increasing numbers of post secondary educators students and tax payers at large not only welcome wholeheartedly this new emphasis and as suggested by the last clause in the title they feel it has been long overdue A second interpretation of the title and the one which is a key theme of this book emphasises the substantive concept of the use and management of time and timing as an integral component of effective instruction From the Introduction Learning and Teaching in the Chinese Classroom Shane N. Phillipson, Bick-har

Lam,2011-10-01 A major concern of all education authorities around the world is the challenge that schools face in catering for learner diversity That this concern is shared by authorities in East Asia including the Education Bureau EDB of Hong Kong is surprising given the high academic achievement of students from this part of the world This book helps to meet this challenge for teachers in East Asia by focusing on specific research that helps explain the basis for diversity in the Chinese learner Although there are many textbooks that cover the basic principles of educational psychology few do not focus on the Chinese learner This book makes the link between the broad field of educational psychology and how these theories contribute to our understanding of the Chinese learner This book is unique in that it draws on recent research to illustrate the application of these theories thereby helping teachers and students in teacher education programmes understand the variability in student achievement Our book is based on the idea that the Chinese context is in many ways different to other cultural contexts and that teachers can make a difference to the outcomes of student learning We also draw on our many years of experience in educating future teachers where our students want us to focus on the Chinese classroom Our student teachers also want to be educated by professors who are themselves researchers In drawing on research about the Chinese learner we also bring to our student teachers the richness and value of educational research We also encourage our student teachers to think of themselves as professional researchers in terms of developing an understanding of the research literature and in finding solutions to their classroom problems
