Ecology Of Running Waters:

Stream Ecology J. David Allan, María M. Castillo, 2007-07-23 A hugely important text for advanced undergraduates as well as graduates with an interest in stream and river ecology this second updated edition is designed to serve as a textbook as well as a working reference for specialists in stream ecology and related fields The book presents vital new findings on human impacts and new work in pollution control flow management restoration and conservation planning that point to practical solutions All told the book is expanded in length by some twenty five percent and includes hundreds of figures most of them new

The Ecology of Running Waters Hugh Bernard Noel Hynes, 1970 In this reprinted classic originally published in 1971 Noel Hynes compiled a comprehensive critical review of the literature pertaining to streams Included are physical and chemical characteristics of flowing waters plantlife the benthos fish and finally man's effects on watercourses The book continues to be widely read and influential in the field Professor Hynes has produced a superb book *Freshwater Biology* Dr Hynes is to be congratulated on writing so valuable a book *The Journal of Ecology* This is an excellent book mainly for the student and professional to whom it will be a mine of information and sound ideas for many years *New Scientist* and *Science Journal* This book is a must for the student of aquatic biology The book like the author can only be held in the highest esteem The *Canadian Field Naturalist* Noel Hynes is Distinguished Emeritus Professor at the University of Waterloo He received his Ph D in 1941 from the University of London After a period in Trinidad studying tropical agriculture and wartime work on locusts in East Africa he was appointed to an academic post at the University of Liverpool In 1964 he moved to Canada to build the Department of Biology at the University of Waterloo where he remained until his retirement His research has been concentrated upon the biology of rivers and streams and he has published over 180 scientific papers two scientific books and an autobiography He has been honored by receiving the Neumann Thienemann Medal of the International Society of Limnology the highest honor in his field of work

Stream Ecology David J. Allan, María M. Castillo, 2007 **The ecology of running waters** H. B. N. Hynes, 1970 **Ideas for a Synthetic Approach to the Ecology of Running Waters** Ramón Margalef, 1960 Methods and Measurements of Periphyton Communities: a Review R. L. Weitzel, 1979

Hynes' Bibliography on the Ecology of Running Waters Hugh Bernard Noel Hynes, 1988 *Assessing the Ecological Integrity of Running Waters* M. Jungwirth, S. Muhar, S. Schmutz, 2012-12-06 The assessment of the ecological integrity of running waters is a prerequisite to an understanding of the effects of human alterations The evaluation of degradation processes provides key information on how to avoid further negative impacts The success of future conservation mitigation and restoration activities will rely on sound assessment methodologies and their ecological relevance and applicability Assessment methodologies are therefore an integral part of sustainable river management This book synthesizes and discusses state of the art experiences in assessment methodologies Including the latest knowledge on structures processes and functions of running waters as a fundamental basis for developing adequate assessment methods the book focuses on

method development application and in particular on integrated assessment methods This book is directed at scientists and managers with the aim of more effective preservation restoration and maintenance of the ecological integrity of running water ecosystems

The Biology and Ecology of Streams and Rivers Alan Hildrew, Paul Giller, 2023-06-19 The challenges that the world's running water systems now face have never been more numerous or acute at the same time these complex habitats remain absolutely crucial to human wellbeing and future survival If rivers can ever be anything like sustainable ecology needs to take its place as an equal among the physical sciences such as hydrology and geomorphology A real understanding of the natural history and ecology of running waters must now be brought even more prominently into river management The primary purpose of this textbook is to provide the up to date overview that students and practitioners will require to achieve this aim The book's unifying focus is on rivers and streams as ecosystems in which the particular identity of organisms is not the main emphasis but rather the processes in which they are involved specifically energy flow and the cycling of materials It builds on the physicochemical foundations of the habitat template and explores the diversity and adaptations of the biota progressing from the population and community ecology of organisms and linking them to ecosystem processes and services in the wider biosphere via the complexities of species interactions and food webs These include water quality and patterns of river discharge as well as aesthetics waste disposal and environmental health While the book is not primarily focused on application per se each chapter addresses how humans affect rivers and in turn are affected by them A final future oriented chapter identifies key strategic areas and sets a roadmap for integrating knowledge of natural history and ecology into policy and management The Biology and Ecology of Streams and Rivers is an accessible text suitable for both senior undergraduate and graduate students taking courses in both lotic and general ecology as well as more established researchers practitioners managers and conservationists requiring a concise and contemporary overview of running waters

Perspectives in Running Water Ecology M. Lock, 2012-12-06 The discipline of stream ecology has grown exponentially along with most other areas of science in the last three decades The field has changed from a fish management dominated poor sister of limnology to a discipline with theoretical constructs and ecological insights as rich as those in any area of ecology A focus on energy transformations nutrient turnover and the storage and processing of organic substrates has greatly enhanced the development of current paradigms For example the data base on microbial biochemical invertebrate interactions in streams is now very extensive A survey of the stream ecology literature reveals the central role played by H B Noel Hynes whom I believe to be the world's premier lotic ecologist Professor Hynes produced the major text in the field The Ecology of Running Waters which has served both as an integrative review and as a bridge between the fish water quality orientation of the fifties and sixties to the process oriented nutritional resource watershed perspectives of the seventies It should also be noted that Professor Hynes book The Biology of Polluted Waters served as a basic reference for the earlier period and he has published over 150 research papers the great majority in stream ecology spanning four decades

Assessing the Ecological Integrity of Running Waters M. Jungwirth, S. Muhar, S. Schmutz, 2000 *Integrated Assessment of Running Waters in Europe* Daniel Hering, Piet F.M. Verdonschot, Otto Moog, Leonard Sandin, 2012-12-06 This book provides the focal point of the European Water Framework Directive offering insight into principles and methodologies of river assessment covering the whole range from the definition of river typologies to specific problems such as the most appropriate taxonomic resolution and software applications The text focuses on benthic macroinvertebrates the taxonomic group most frequently used in bioassessment **Energy Research Abstracts** ,1983 **ERDA Energy Research Abstracts** ,1983 Research in the ecology of running waters with special reference to the zoobenthos Ivan Tusa, 1993

The Llobregat Sergi Sabater, Antoni Ginebreda, Damià Barceló, 2012-06-02 The Llobregat belongs to the most thoroughly studied rivers in Europe and is a paradigm of the confluence of human and natural disturbances in a single basin Because of its location in a very densely populated region and its Mediterranean character the Llobregat supports a mixture of irregular flow water abstraction excess nutrients mining debris and a wide array of pollutants The aquatic organisms strive to survive in a dramatically changing river that passes through a succession of dams weirs and channels The long term river monitoring as well as the research that has been carried out in the river for a long time have provided an extensive knowledge of these disturbances and their effects on the biological communities This book highlights the available information with emphasis on the hydrological chemical and biological elements interspersed in the river Experts in the field discuss the main nutrient patterns and pollutant occurrence and the responses of the biological quality elements as well as the river ecosystem to the overall natural and man made influences *Encyclopedia of Inland Waters* ,2009-01-13 Inland aquatic habitats occur world wide at all scales from marshes swamps and temporary puddles to ponds lakes and inland seas from streams and creeks to rolling rivers Vital for biological diversity ecosystem function and as resources for human life commerce and leisure inland waters are a vital component of life on Earth The Encyclopedia of Inland Waters describes and explains all the basic features of the subject from water chemistry and physics to the biology of aquatic creatures and the complex function and balance of aquatic ecosystems of varying size and complexity Used and abused as an essential resource it is vital that we understand and manage them as much as we appreciate and enjoy them This extraordinary reference brings together the very best research to provide the basic and advanced information necessary for scientists to understand these ecosystems and for water resource managers and consultants to manage and protect them for future generations Encyclopedic reference to Limnology a key core subject in ecology taught as a specialist course in universities Over 240 topic related articles cover the field Gene Likens is a renowned limnologist and conservationist Emeritus Director of the Institute of Ecosystems Research elected member of the American Philosophical Society and recipient of the 2001 National Medal of Science Subject Section Editors and authors include the very best research workers in the field **Assessing the Ecological Integrity of Running Waters** M. Barrett, Kevin J. Murphy, Philip Max Wade, 2012-12-06 There is a growing need for appropriate management of aquatic plants in rivers and canals lakes and reservoirs and drainage channels and urban waterways This management must be based on a sound knowledge of the ecology of freshwater plants their distribution and the different forms of control available including chemical physical biological and biomanipulation This series of papers from over 20 different countries was generated from the highly successful European Weed Research Society symposia on aquatic plant management this being the ninth The contributions provide a valuable insight into the complexities involved in managing aquatic systems discuss state of the art control techniques such as biomanipulation using fish and waterfowl and the use of straw and deal with patterns of regrowth and recovery post management Careful consideration is given to the use of chemicals a practice which has come under scrutiny in recent years Underpinning the development of such control techniques is a growing body of knowledge relating to the biology and ecology of water plants including growth responses under different trophic conditions the impact of pollution and aspects of photosynthesis The authorship of the papers represents the collective wisdom of leading scientists and experts from fisheries agencies river authorities nature conservation agencies the agrochemical industry and both governmental and non governmental organisations River and Stream Ecosystems of the World Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 2006-02-06 This is a synopsis and review of the major rivers of the world
