Economic Modelling Under The Applied General Equilibrium Approach:

Economic Modelling Under the Applied General Equilibrium Approach Amedeo Fossati, 1996 Provides valuable insights into the contemporary state of the art of investigating policy issues *Economic Modelling in the OECD Countries* Homa Motamen-Scobie, 2012-12-06 among the 159 member countries of the United Nations Organization which are treated as country units while smaller countries are grouped together in regions The number of equations used is approximately 13 700 while the number of software steps for computation is approximately 100000 Computation including tabulation can nevertheless be performed very rapidly and only about 20 minutes is required to make forecasts from the present up to the year 2000 The FUGI model is at present being used by the Projections and Perspectives Studies Branch Department of International Economic and Social Affairs of the United Nations for simulations of United Nations medium and long term international development strategies while the Project LINK model is being used for short term forecasts Onishi 1985 Stimulated by our latest joint research with the United Nations University on a global early warning system for displaced persons we have felt the need for our FUGI model to go beyond its present capacities centred on an economic model in the rather traditional restricted sense of the term and to develop into a model that can in the future analyse global

problematic or global complexes of symptoms and complicated questions including various types of environmental problems and the sorts of displaced persons issues to which we are now directing our attention We are thus expanding the scope of our fifth generation FUGI model presently under development to deal with such issues **Empirical Approaches to Fiscal Policy Modelling** Heimler, Meulders, 2012-12-06 Alberto Heimler and Daniele Meulders In the last decade the modelling of the interrelationship between public finance and the rest of the economy has seen substantial advances reflected in many of the papers delivered to the Applied Econometrics Association Conference held at Confindustria Rome on 30 November and 1 December 1989 In particular the development of the literature on applied general equilibrium modelling has found most of its applications in the field of taxation enlarging and completing the estimation of the welfare loss due to distortionary taxes In this context an important extension has been the introduction of overlapping generation models Furthermore it has become clear that most individual decisions especially the decision whether or not to work are dependent upon the tax system in the sense that the higher the marginal income tax the larger the wedge between labour cost and take home pay the last one being the decision variable in the demand for leisure Finally in the European context the completion of the internal market has brought about the necessity to harmonize fiscal systems in the EEC member countries A number of papers study therefore the effects of fiscal reform on efficiency welfare and growth *Environment and Transport in Economic Modelling* Roberto Roson, Kenneth A. Small, 2013-06-29 The analysis of the relationship between transport and environmental policy invites an interdisciplinary treatment and a variety of approaches and rightly so An important subset of the approaches used involves economic analysis Economic approaches often consider pricing policies attempting to evaluate

their effectiveness in comparison with more traditional measures such as command and control regulation and directed technological innovation. Another important subset of approaches involves simulation modelling where key relationships are presented mathematically so that their influence can be quantified and their interrelationships discerned precisely. This book treats the intersection of these two subsets: simulation models with a strong economic content. This intersection defines a broad but powerful way to study environment and transport. Its breadth is illustrated by the wide range of policies treated here, from carbon taxes to speed limits. Its power derives from the way insights into interrelated actions and the role of markets: the strong points of economic theory are cast into a form suitable for making quantitative predictions about the results of policies. Case studies are used to show how simulation models can be designed and used to quantify the effectiveness of economic policies in terms of transport systems management and environmental protection: the emphasis being on the role of the markets in tracing the many effects that policies have both anticipated and otherwise.

Economic Multisectoral Modelling Between Past and Future Rossella Bardazzi, 2013. This book is a tribute to the work of Maurizio Grassini, econometrician and model builder. The selection of his works in the first part of the volume is mainly devoted to research issues of multisectoral modelling. In fact, M. Grassini has dedicated a large part of his professional life to building and developing the INTIMO model for the Italian economy within the INFORUM research project. The book does not aim to be a celebration of the past but takes a look at the future of the multisectoral modelling which M. Grassini has contributed so much to. In the second part of the book, colleagues and friends who have encountered M. Grassini in the professional sphere on matters of quantitative economic analysis or still working with him on interindustry models have given their contribution to look at the future prospects of a research field firmly based on the experience of what has been done so far.

Applied General Equilibrium Modelling Henk Don, Theo C.M.J. van de Klundert, Jarig van Sinderen, 2013-04-17. Over the last decade or so, applied general equilibrium models have rapidly become a major tool for policy advice on issues regarding allocation and efficiency, most notably taxes and tariffs. This reflects the power of the general equilibrium approach to allocative questions and the capability of today's applied models to come up with realistic answers. However, it by no means implies that the theoretical, practical, and empirical problems faced by researchers in applied modelling have all been solved in a satisfactory way. Rather, a promising field of research has been opened up, inviting theorists and practitioners to further explore and exploit its potential. The state of the art in applied general equilibrium modelling is reflected in this volume. The introductory Chapter Part I evaluates the use of economic modelling to address policy questions and discusses the advantages and disadvantages of applied general equilibrium models. Three substantive issues are dealt with in Chapters 2-8: Tax Reform and Capital, Part II: Intertemporal Aspects and Expectations, Part III: Taxes and the Labour Market, Part IV. While all parts contain results relevant for economic policy, it is clear that theory and applications for these areas are in different stages of development. We hope that this book will bring inspiration, insight, and information to researchers, students, and policy

advisors Integrated Macro-Micro-Modelling Under Rational Expectations Michael Malakellis,2012-12-06 This monograph is concerned with the formulation and implementation of ORANI INT an intertemporal Computable General Equilibrium CGE model of the Australian economy The aim is to bring together in a balanced approach theory and data for the purpose of developing a practical state of the art tool for policy analysis The modelling approach adopted is motivated by the recent trend in economy wide modelling to combine the respective strengths of traditional CGE models and modern macroeconomic models Traditional CGE models typically provide a disaggregate representation of the economy at a single point in time Such models are useful for analysing issues involving the allocation of resources among the various agents identified at a particular point in time Modern macroeconomic models on the other hand usually provide an aggregate representation of the economy over many points in time Such models are useful for analysing issues involving the allocation of resources across time A model that combines the strengths of static CGE models and modern macro dynamic models is amenable to addressing a wide range of policy issues To demonstrate this point ORANI INT is used to analyse tariff reform Policy Simulations in the European Union Amedeo Fossati,John Hutton,1998-02-19 The papers in this much needed collection employ Applied General Equilibrium methodology to address a wide variety of concerns within the European Union Contributors examine five main policy areas international market integration policy simulations with alternative treatments of factor markets policies for carbon dioxide abatement competitiveness and convergence VAT and income tax reform

Econometrics and the Philosophy of Economics Bernt P. Stigum,2015-12-29 As most econometricians will readily agree the data used in applied econometrics seldom provide accurate measurements for the pertinent theory's variables Here Bernt Stigum offers the first systematic and theoretically sound way of accounting for such inaccuracies He and a distinguished group of contributors bridge econometrics and the philosophy of economics two topics that seem worlds apart They ask How is a science of economics possible The answer is elusive Economic theory seems to be about abstract ideas or it might be said about toys in a toy community How can a researcher with such tools learn anything about the social reality in which he or she lives This book shows that an econometrician with the proper understanding of economic theory and the right kind of questions can gain knowledge about characteristic features of the social world It addresses varied topics in both classical and Bayesian econometrics offering ample evidence that its answer to the fundamental question is sound The first book to comprehensively explore economic theory and econometrics simultaneously Econometrics and the Philosophy of Economics represents an authoritative account of contemporary economic methodology About a third of the chapters are authored or

coauthored by Heather Anderson Erik Birn Christophe Bontemps Jeffrey A Dubin Harald E Goldstein Clive W J Granger David F Hendry Herman Ruge Jervell Dale W Jorgenson Hans Martin Krolzig Nils Lid Hjort Daniel L McFadden Grayham E Mizon Tore Schweder Geir Storvik and Herman K van Dijk Globalization and Regional Economic Modeling Russel Cooper, Kieran Donaghy, Geoffrey Hewings, 2007-09-23 Globalization is affecting regional economies in a broad spectrum of aspects from labor market conditions and development policies to climate change To understand better how this works we need both conceptual and methodological contributions We need new schemes to organize our thinking direct our attention and frame thought experiments on the basis of which guidance may be offered And we need methodological innovations that enable us to carry out studies and thought experiments at levels of spatial and temporal resolution and formal complexity adequate to capture and account for the phenomena that characterize globalization The chapters of this volume written by an international cast of eminent regional scientists represent contributions of both types in many cases introducing and demonstrating the use of new tools for analyzing and understanding enormous changes underway in regional economies around the world Case Study on South-South Cooperation: PRC-ADB Knowledge-Sharing Platform Asian Development Bank, 2012-08-01 This publication showcases the beginnings of the People's Republic of China Asian Development Bank knowledge sharing platform its context activities challenges and lessons learned It concludes by mapping out the next steps to bring it to its strategic mission **Growth: Energy, the environment, and economic growth** Dale Weldeau Jorgenson, 1998 Methods of Interregional and Regional Analysis Walter Isard, Iwan J.
