Originally published in 1979 For decades conservationists have argued that increasing population will eventually out strip the limited natural resources of the earth Economists have responded by saying that any resource scarcity will be forestalled by changes in tastes and technology induced by the appropriate price signals This study is an attempt to develop a theoretical framework for analysing some of the issues related to this debate Using an optimal growth theory framework the author analyses the problem of optimally allocating a finite stock of the resource over time In the process the author points out the crucial parameters and value judgments relevant to the various issues This title will be of interest to students of environmental economics

Sustainable Resource Use and Economic Dynamics Lucas Bretschger, Sjak Smulders, 2007-07-19 This volume includes a selection of papers presented at the conference Sustainable Resource Use and Economic Dynamics SURED held on Monte Verita in Ascona Switzerland in June 2004 Thirty years after the publication of the famous symposium issue of the Review of Economic Studies in 1974 which started the neoclassical literature on growth theory and resource economics The conference sought to reinforce research

efforts in order to provide adequate solutions for today's challenges in the field of sustainable development. The conference compiled innovative research from resource energy and environmental economics and dynamic economic theory. By bringing together leading experts, junior and senior scholars in these fields, it covered a broad range of aspects regarding the relationship between natural resource use and long-term economic development. The SURED conference made use of the wonderful surroundings on the mountain of truth and the remarkable history of the conference centre which was shaped by the desire to return to a natural way of life. In this tradition, the conference aimed at finding ways of living in an economically developed world and at the same time taking into account the natural environment with its restrictions and requirements. We take the opportunity to thank the staff of the Monte Verita centre for the hospitality and the excellent service.

Mathematical Models in Economics - Volume II Wei-Bin Zhang, 2010-06-10. Mathematical Models in Economics is a component of Encyclopedia of Mathematical Sciences in which is part of the global Encyclopedia of Life Support Systems (EOLSS), an integrated compendium of twenty-one Encyclopedias. This theme is organized into several different topics and introduces the applications of mathematics to economics. Mathematical economics has experienced rapid growth, generating many new academic fields associated with the development of mathematical theory and computer mathematics. Mathematics is the backbone of modern economics. It plays a basic role in creating ideas, constructing new theories, and empirically testing ideas and theories. Mathematics is now an integral part of economics. The main advances in modern economics are characterized by applying mathematics to various economic problems. Many of today's profound insights into economic problems could hardly be obtained without the help of mathematics. The concepts of equilibrium versus non-equilibrium, stability versus instability, and steady states versus chaos in the contemporary literature are difficult to explain without mathematics. The theme discusses modern versions of some classical economic theories, taking account of balancing between significance of economic issues and mathematical techniques. These two volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel, and Policy analysts, managers, and decision makers, and NGOs.
