Ecologism An Introduction:

Ecologism Brian Baxter, 1999 The text provides a survey of the main components of ecologism and examines elements that have been neglected in existing literature It contains debates surrounding this aspect of political philosophy and the author's own development of them **Ecology and Society** Luke Martell, 2013-04-23 This book introduces green ideas to students of the social sciences showing how society affects and is affected by nature and assessing the future of the green movement **Political Ecology** Paul Robbins, 2019-10-08 An accessible focused exploration of the field of political ecology The third edition of Political Ecology spans this sprawling field using grounded examples and careful readings of current literature While the study of political ecology is sometimes difficult to fathom owing to its breadth and diversity this resource simplifies the discussion by reducing the field down into a few core questions and arguments These points clearly demonstrate how critical theory can make pragmatic contributions to the fields of conservation development and environmental management The latest edition of this seminal work is also more closely focused with references to recent work from around the world Further Political Ecology raises critical questions about traditional approaches to environmental questions and problems This new edition Includes international work in the field coming out of Europe Latin America and Asia Explains political ecology and its tendency to disrupt the environmental research and practice by both advancing and undermining associated fields of study Contains contributions from a wide range of diverse backgrounds and expertise Offers a resource that is written in highly accessible straightforward language Outlines the frontiers of the field and frames climate change and the end of population growth with the framework of political ecology An excellent resource for undergraduates and academics the third edition of Political Ecology offers an updated edition of the guide to this diverse quickly growing field that is at the heart of how humans shape the world and in turn are shaped by it **The Coming Authoritarian Ecology** Fabrice Flipo, 2018-05-24 The book examines ecological issues such as climate change and biodiversity articulating local and global scales and short and long term perspectives questioning what development and progress are The goal is to show how diverging points of view are conflictingly articulated to one another in a political ideology perspective This perspective which is close to the main actor's point of view allows displacement of the usual analysis and offers a new synthesis **Ecologism** Mark J. Smith, 1998 Ecological thinking has gained increasing prevalence in recent decades affecting political social and everyday life sparking great conflicts of interest in public policy areas In this accessible text Mark Smith considers these conflicts and proposes a new approach to environmental responsibility Ecologism addresses how we understand nature and the environment and applies this understanding to current sociological approaches Smith examines how the core questions raised by a green perspective transform the frame of reference for modern thinking He then outlines the distinctive features of ecological thought discussing two areas of contention the present generation's obligation to future generations and the relationship existing between humans and animals He then explores the difficulties in applying

conventional ideas such as rights or justice to issues of the environment as well as the possibility that green thinking could lead to a new politics of obligation one grounded firmly in ecological citizenship Designed as an essential text for students of environmental studies politics and sociology this book is necessary reading for anyone with an interest in ecology and its social environment *Political ideas for A Level: Liberalism, Conservatism, Socialism, Nationalism, Multiculturalism, Ecologism* Richard Kelly, Neil McNaughton, 2017-09-25 Exam Board AQA Edexcel OCR WJEC Level A level Subject Politics First Teaching September 2017 First Exam June 2018 Build your students knowledge of the ideas tensions and key thinkers within the core ideologies of conservatism liberalism and socialism plus the additional ideologies of Nationalism Multiculturalism and Ecologism Students will understand the core ideas and principles behind the political ideologies and how they apply in practice to human nature the state society and the economy Comprehensive coverage of the ideologies of Liberalism Conservatism Socialism Nationalism Multiculturalism and Ecologism Definitions of key terms and concepts to help clarify knowledge and understanding of political language Exam focus sections at the end of each chapter to test and develop understanding of key topics offering practice for short and essay questions *Transdisciplinary Challenges in Landscape Ecology and Restoration Ecology - An Anthology* Zev Naveh, 2007-06-06 Capitalizing on forty years of intensive ecological studies this anthology presents a collection of widely dispersed major publications on theoretical and practical Mediterranean global environmental and landscape issues Each chapter features a comprehensive study of ecological and landscape issues synthesized in the introduction and woven with autobiographical experiences The concluding chapter calls for a transdisciplinary shift in all environmental scientific fields and particularly in landscape and restoration ecology to cope with the complex closely interwoven ecological socio economical political and cultural crises facing human society during the present crucial transition from the industrial to the post industrial global information age Updating and broadening the scope of the groundbreaking Springer book on Landscape Theory and Applications by the author and Lieberman 1994 this is a unique transdisciplinary attempt based on advanced systems complexity theories which link the natural and human sciences

background against which a political aspect of building a sustainable society must be considered These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Explaining Environmentalism Philip W. Sutton, 2019-06-04 This title was first published in 2000 The author examines those current theories which purport to explain the emergence and character of new social movements in the advanced industrial societies since the 1960s In particular it sets out to test the efficacy of these explanations in relation to the history of the environmental movement in Britain The book breaks new ground in bringing together both short term and the more historically orientated long term explanations into a single volume thus providing an invaluable resource for students of social movements Its critical exposition of major theories also points to the need for a more developmental approach which seeks to connect old and new movement forms thus allowing for a more balanced evaluation of the potential of the environmental movement to bring about significant social change

After Foucault Lisa Downing, 2018-06-07 The work of Michel Foucault is much read widely cited and occasionally misunderstood In response to this state of affairs this collection aims to clarify to contextualize and to contribute to Foucauldian scholarship in a very specific way Rather than offering either a conceptual introduction to Foucault's work or a series of interventions aimed specifically at experts After Foucault explores his critical afterlives situates his work in current debates and explains his intellectual legacy As well as offering up to date assessments of Foucault's ongoing use in fields such as literary studies sexuality studies and history chapters explore his relevance for urgent and emerging disciplines and debates including ecology animal studies and the analysis of neoliberalism Written in an accessible style by leading experts After Foucault demonstrates a commitment to taking seriously the work of a key twentieth century thinker for contemporary academic disciplines political phenomena and cultural life

ScienceDirect shortly upon publication Principles of Soundscape Ecology Bryan C. Pijanowski, 2024-06-06 From a founding figure in the field the definitive introduction to an exciting new science What do the sounds of a chorus of tropical birds and frogs a clap of thunder and a cacophony of urban traffic have in common They are all components of a soundscape acoustic environments that have been identified by scientists as a combination of the biophony geophony and anthrophony respectively of all of Earth's sound sources As sound is a ubiquitous occurrence in nature it is actively sensed by most animals and is an important way for them to understand how their environment is changing For humans environmental sound is a major factor in creating a psychological sense of place and many forms of sonic expression by people embed knowledge and culture In this book soundscape ecology pioneer Bryan C Pijanowski presents the definitive text for both students and practitioners who are seeking to engage with this thrilling new field Principles of Soundscape Ecology clearly outlines soundscape ecology's critical foundations key concepts methods and applications Fundamentals include concise and valuable descriptions of the physics of sound as well as a thorough elucidation of all sounds that occur on Earth Pijanowski also presents a rich overview of the ecological sociocultural and technical theories that support this new science illustrating the breadth of this amazingly transdisciplinary field In methods he describes the principles of data mining signal processing and mixed methods approaches used to study soundscapes in ecological social or socio ecological contexts The final section focuses on terrestrial aquatic urban and music applications demonstrating soundscape ecology's utility in nearly all spaces

Industrial Ecology and Spaces of Innovation K. Green, 2006-01-01 This is an especially timely book Carefully organized and well motivated its power lies in the explicit effort to ask how industrial ecology and innovation studies do can and should intersect Reid Lifset Yale School of Forestry and Environmental Studies and editor Journal of Industrial Ecology This book explores the disciplinary interfaces and practical implications of working across the two disciplines of industrial ecology IE and innovation studies IS Both disciplines have something to say about instigating environmental improvement and more sustainable futures IE is predicated on the idea that social and economic systems mirror or should be made to mirror natural ecological systems Proponents of IE devise models and techniques to trace material and energy resource flows as they move through social and economic systems They propose policy and management improvements to increase the resource efficiency of such systems By contrast IS researchers work with the idea that innovation is a dynamic activity vital to social and economic change and is shaped by a range of actors in industry in government and in households The authors illustrate the conceptual and practical problems and opportunities of working across this bi disciplinary interface with case studies presented from each and from hybrid perspectives that draw on both These include applied examples from IE such as an evaluation of industrial symbiosis in the UK and from working projects in industrialising countries Cases that originate with IS cover the areas of food construction and waste incineration New directions for conceptual development and further research are also offered Conceptual blindspots and research gaps are identified at the interface of the two disciplines

Industrial Ecology and Spaces of Innovation will appeal to a wide and interdisciplinary audience including academics and researchers of environmental innovation management and economics industrial ecology and schools of environmental engineering Business environmental practitioners consultants and managers working with techniques such as life cycle analysis environmental impact assessment and collaborative industrial symbiosis initiatives will also find much to engage them within this book

Ecology, Environment and Pollution Felix Sweeney & Riley Mitchell, 2019-01-01 Ecology is the scientific study of the distributions abundance and relations of organisms and their interactions with the environment Ecology includes the study of plant and animal populations plant and animal communities and ecosystems Ecosystems describe the web or network of relations among organisms at different scales of organization An ecosystem is a self contained dynamic system made of a population of species in its physical environment This concept is used to study the complex interactions between the organisms plants animals bacteria and fungi that make up the community There are many different ways in which the community of organisms interacts Environment means everything around to a living being Especially the circumstances of life of people or society in their life conditions It comprises the set of natural social and cultural values existing in a place and at a particular time that influence in the life of the human being and in the generations to come Pollution is anything that makes the earth dirty and unhealthy Land air and water are all affected by pollution Pollution takes up space on our land Many of the things people use every day come in packages like food games school supplies and electronics Environmental science is the systematic study of our environment and our proper place in it A relatively new field environmental science is highly interdisciplinary integrating natural sciences social sciences and humanities in a broad holistic study of the world around us The aim of the present book is to provide its readers an acquaintance with the recent research trends in the area of ecology environmental science and pollution

Grassland Ecophysiology and Grazing Ecology Gilles Lemaire, J. Hodgson, A. Moraes, P. C. F. Carvalho, C. Nabinger, 2000-11-03 This text presents edited key papers from the International Symposium on Grassland Ecophysiology and Grazing Ecology held in Curitiba Brazil in August 1999 It considers how plants within grasslands respond to and are adapted to grazing animals

The Routledge Handbook of Urban Ecology Ian Douglas, P M L Anderson, David Goode, Michael C. Houck, David Maddox, Harini Nagendra, Puay Yok Tan, 2020-12-15 This second edition covers recent developments around the world with contributors from 33 different countries It widens the handbook s scope by including ecological design consideration of cultural dimensions of the use and conservation of urban nature the roles of government and civil society and the continuing issues of equity and fairness in access to urban greenspaces New features include an emphasis on the biophilic design of homes and workplaces demonstrating the value of nature in order to counter the still prevalent attitude among many developers that nature is a constraint rather than a value The volume explores great practical achievements that have occurred since the first edition with many governments increasingly recognizing and legislating on urban nature and green

infrastructure matters since cities play a major role in adapting to change particularly to climate crisis New topics such as the ecological role of light at night and human microbiota in the urban ecosystem are introduced Additional attention is given to food production in cities particularly the multiple roles of urban agriculture and household gardens in different contexts from wealthy communities to the poorest informal settlements in deprived communities The emphasis is on demonstrating what can be achieved and what is already being done The book aims to help scholars and graduate students by providing an invaluable and up to date guide to current urban ecological thinking across the range of disciplines such as geography ecology environmental science studies planning and urban studies that converge in the study of towns and cities and urban design and living It will also assist practitioners and civil society members in discovering the ways different specialists and thinkers approach urban nature

Applied Mathematical Ecology Simon A. Levin, Thomas G. Hallam, Louis J.

Gross, 2012-12-06 The Second Autumn Course on Mathematical Ecology was held at the International Centre for Theoretical Physics in Trieste Italy in November and December of 1986 During the four year period that had elapsed since the First Autumn Course on Mathematical Ecology sufficient progress had been made in applied mathematical ecology to merit tilting the balance maintained between theoretical aspects and applications in the 1982 Course toward applications The course format while similar to that of the first Autumn Course on Mathematical Ecology consequently focused upon applications of mathematical ecology Current areas of application are almost as diverse as the spectrum covered by ecology The topics of this book reflect this diversity and were chosen because of perceived interest and utility to developing countries Topical lectures began with foundational material mostly derived from Mathematical Ecology An Introduction a compilation of the lectures of the 1982 course published by Springer Verlag in this series Volume 17 and when possible progressed to the frontiers of research In addition to the course lectures workshops were arranged for small groups to supplement and enhance the learning experience Other perspectives were provided through presentations by course participants and speakers at the associated Research Conference Many of the research papers are in a companion volume Mathematical Ecology Proceedings Trieste 1986 published by World Scientific Press in 1988 This book is structured primarily by application area Part II provides an introduction to mathematical and statistical applications in resource management

Philosophy of Ecology, 2011-05-16 The most pressing problems facing humanity today over population energy shortages climate change soil erosion species extinctions the risk of epidemic disease the threat of warfare that could destroy all the hard won gains of civilization and even the recent fibrillations of the stock market are all ecological or have a large ecological component in this volume philosophers turn their attention to understanding the science of ecology and its huge implications for the human project To get the application of ecology to policy or other practical concerns right humanity needs a clear and disinterested philosophical understanding of ecology which can help identify the practical lessons of science Conversely the urgent practical demands humanity faces today cannot help but direct scientific and philosophical

investigation toward the basis of those ecological challenges that threaten human survival This book will help to fuel the timely renaissance of interest in philosophy of ecology that is now occurring in the philosophical profession Provides a bridge between philosophy and current scientific findings Covers theory and applications Encourages multi disciplinary dialogue

The Political Ecology of Agrofuels Kristina Dietz,Bettina Engels,Oliver Pye,Achim Brunnengräber,2014-11-20 This book explores the political ecology of agrofuels as an encompassing socio spatial transformation process consisting of a series of changing contexts political reconfigurations and the restructuring of social and labour relations It includes conceptual chapters as well as case studies from different world regions North America Europe Latin America sub Saharan Africa Asia and levels local national transnational The Political Ecology of Agrofuels advances a conceptualisation of agrofuels that helps to fill existing research gaps It covers global food regimes and agrarian politics as well as political arenas such as energy climate transport and trade It reflects on the biophysical materiality of agrofuels new forms of nature appropriation struggles discursive framings the building of hegemony shifting geopolitical constellations socio spatial configurations of power the construction of territory the agency of social movements and the different ways in which agrofuels are politicized at different scales This book asks how patterns of mobility emissions regulation food and energy production and consumption and social relations e g labour class and gender relations are shaped and re shaped by the materiality and representations of agrofuels in both the Global South and North The book provides tools for thinking about the diversity of the conflicts struggles and spatial socio ecological and politico economic reconfigurations and perpetuations engendered by current production and consumption patterns in the agrofuel sector *The Ecology of Fire* Robert J. Whelan,1995-08-10 Wildfires kill many animals but are populations of animals affected How do animals survive the passage of fire Why do some tree species survive and others die in a fire Do frequent fires cause changes in plant community composition Answering questions such as these requires an understanding of the ecological effects of fire Aimed at senior undergraduate students researchers foresters and other land managers Dr Whelan s book examines the changes wrought by fires with reference to general ecological theory The impacts of fires on individual organisms populations and communities are examined separately and emphasis is placed on the importance of fire regime Each chapter includes a listing of outstanding questions that identify gaps in current knowledge The book finishes by summarising the major aspects of ecology that are of particular relevance to management of fires both protection against wildfires and deliberate use of fire
