Ecology Economics Ethics The Broken Circle:

Ecology, Economics, Ethics F. Herbert Bormann, Stephen R. Kellert, Stephan R... Kellert, Professor F Herbert Bormann, 1991 In this book a distinguished group of environmental experts argues that in order to solve global environmental problems we must view them in a broad interdisciplinary perspective that recognizes the relations the interconnected circle among ecology economics and ethics Currently the circle is broken they say because environmental policy is decided on short term estimations of material return that take little account of the economic or moral burdens that will be borne by future generations if we deplete our resources now **Creative Actualization** Hugh P. Climate Change and Arctic Sustainable Development UNESCO,2009-01-01 The Arctic is undergoing rapid and

dramatic environmental and social transformations due to climate change This has ramifications for the entire planet as change spreads through interconnected global networks that are environmental cultural economic and political Today with the major thrust of research shifting away from deciphering causes and monitoring trends the central preoccupation of a growing circle of actors has become the exploration of strategies for responding and adapting to climate change But to understand the far reaching nature of climate change impacts and the complexities of adaptation a truly interdisciplinary approach is required Unique in the UN system UNESCO brings together the domains of natural sciences social sciences culture education and communication Given this broad mandate UNESCO favors integrated approaches for monitoring and adapting to climate change in the Arctic fostering dialogue among scientists circumpolar communities and decision makers This book brings together the knowledge concerns and visions of leading Arctic scientists in the natural and social sciences prominent Chukchi Even Inuit and Saami leaders from across the circumpolar North and international experts in education health and ethics They highlight the urgent need for a sustained interdisciplinary and multi actor approach to monitoring managing and responding to climate change in the Arctic and explore avenues by which this can be achieved Publisher s description **Good Growing** Leslie A. Ecologies of the Heart E. N. Anderson, 1996-03-28 There is much we can learn about conservation from native peoples says Gene Anderson While the advanced nations of the West have failed to control overfishing deforestation soil erosion pollution and a host of other environmental problems many traditional peoples manage their natural resources quite successfully And if some traditional peoples mismanage the environment the irrational value some place on rhino horn for instance has left this species endangered the fact remains that most have found ways to introduce sound ecological management into their daily lives Why have they succeeded while we have failed In *Ecologies of the Heart* Gene Anderson reveals how religion and other folk beliefs help pre industrial peoples control and protect their resources Equally important he offers much insight into why our own environmental policies have failed and what we can do to better manage our resources A cultural ecologist Gene Anderson has spent his life exploring the ways in which different groups of people manage the environment and he has lived for years in fishing communities in Hong Kong Malaysia Singapore Tahiti and British Columbia as well as in a Mayan farmtown in south Mexico where he has studied fisheries farming and forest management He has concluded that all traditional societies that have managed resources well over time have done so in part through religion by the use of emotionally powerful cultural symbols that reinforce particular resource management strategies Moreover he argues that these religious beliefs while seeming unscientific if not irrational at first glance are actually based on long observation of nature To illustrate this insight he includes many fascinating portraits of native life He offers for instance an intriguing discussion of the Chinese belief system known as Feng Shui wind and water and tells of

meeting villagers in remote areas of Hong Kong's New Territories who assert that dragons live in the mountains and that to disturb them by cutting too sharply into the rock surface would cause floods and landslides which in fact it does. He describes the Tlingit Indians of the Pacific Northwest who before they strip bark from the great cedar trees make elaborate apologies to spirits they believe live inside the trees assuring the spirits that they take only what is necessary. And we read of the Maya of southern Mexico who speak of the lords of the Forest and the Animals who punish those who take more from the land or the rivers than they need. These beliefs work in part because they are based on long observation of nature but also and equally important because they are incorporated into a larger cosmology so that people have a strong emotional investment in them. And conversely Anderson argues that our environmental programs often fail because we have not found a way to engage our emotions in conservation practices. Folk beliefs are often dismissed as irrational superstitions. Yet as Anderson shows these beliefs do more to protect the environment than modern science does in the West. Full of insights, *Ecologies of the Heart* mixes anthropology with ecology and psychology, traditional myth and folklore with informed discussions of conservation efforts in industrial society to reveal a strikingly new approach to our current environmental crises. **The**

Environmental Dimensions of Islam Mū'il Yūsuf 'Izz al-Dīn, 2000. Islamic attitudes are of increasing concern to the Western world and environmental issues claim much attention as well. Perhaps though few non-Muslims realise that there is a distinctive Islamic contribution to the environmental debate; consequently it provides a much needed Islamic input into the world wide process of consultation on the future of the planet. Born from the 1992 Earth Summit, this book is a major account of Islam's contribution to the environmental debate. Dr Izzi Dien views the topic from historical, theological, philosophical, legal and ethical perspectives, examining such aspects as the Quranic doctrine of Creation, human responsibility and the actions of governments. His conclusions will not only be an invaluable submission to ecological groups but enlighten the general public both inside and outside the Islamic community about Muslim teaching on this area. *The Environmental Dimensions of Islam* is an important book touching on issues of community empowerment and culture. It will challenge those of all faiths and none to reconsider their attitudes towards both the Islamic and the natural world. *Saving Creation* Christopher J.
