**The Future of Insurance Regulation in the United States** Martin F. Grace, Robert W. Klein, 2009-12-01 A Brookings Institution Press and Georgia State University publication Important changes have buffeted the insurance industry over the past decade The 1999 repeal of key provisions of the Glass Steagall Act unleashed a wave of conglomeration in financial services as bank holding companies acquired insurance and securities businesses and to a much lesser degree insurance companies acquired securities firms and banks Rivalry within the sector has intensified insurance companies have developed products that compete directly with the offerings of banks and securities firms and vice versa In addition the industry has become increasingly global Against this backdrop pressure has been building for fundamental changes to the structure of insurance regulation in the United States Despite several court challenges over the years insurance continues to be regulated by the states Many insurance companies view state regulation as an increasing drag on their efficiency and competitiveness and support a federal regulatory system However powerful stakeholders including state officials state and regional insurance companies and many insurance agents oppose federal regulation As a result proposals to establish an optional federal charter OFC for insurance companies and agents remain mired in fierce debate The Future of Insurance Regulation in the United States gathers some of the country's leading experts on financial regulation to assess the case for an enhanced federal role in the insurance sector They pay particular attention to the merits of an OFC and how it might be designed They also consider the principles that should guide insurance

regulatory policies regardless of the institutional framework and examine the implications of financial convergence and the internationalization of insurance markets for an optimal regulatory structure The debate over insurance regulation has only grown in complexity and intensity since the financial crisis began in the fall of 2008 This book will both inform and help to shape those critical discussions Contributors John A Cooke International Financial Services London Robert Detlefsen National Association of Mutual Insurance Companies Martin F Grace Georgia State University Robert W Klein Georgia State University Robert E Litan Ewing Marion Kauffman Foundation and Brookings Institution Phil O Connor PROactive Strategies Hal S Scott Harvard Law School Harold D Skipper Georgia State University Peter J Wallison American Enterprise Institute

**The Economics of Telecommunications Systems** Noel D. Uri, 2004 The process of formulating and implementing telecommunications policy in the United States often seems chaotic and disorganised with overlapping responsibility and frequent conflicts among federal and state regulators Congress the Administration and the Federal judiciary There has never been a consensus on what should change and what should remain unaltered Telecommunications policy has evolved gradually over a relatively long period of time resulting in a cumulative major transformation It is still tied however to the Communications Act of 1934 Actions have been taken that have gradually moved policy from traditional public utility regulation of a monopoly to greater reliance on market forces and encouragement of competition The policies are an amalgam incorporating elements from a wide range of political and economic views There is nothing endemic in this transformation process to guarantee that the resulting policies have led to greater economic efficiency or that they are better in some subjective sense than alternatives that are available policies that have been implemented in order to evaluate their impact An objective evaluation of the impact of a policy affords an opportunity to make adjustments to it based on the realised economic consequences This approach to policy making can be looked upon as a learning by doing exercise In this book a number of objective studies based on data from various telecommunications systems are presented These studies discuss and evaluate policies that have been implemented In a number of instances the policies have been misguided Recommendations to correct the most egregious problems are offered

**Global Markets and Government Regulation in Telecommunications** Kirsten Rodine-Hardy, 2013-03-25 In recent years liberalization privatization and deregulation have become commonplace in sectors once dominated by government owned monopolies In telecommunications for example during the 1990s more than 129 countries established independent regulatory agencies and more than 100 countries privatized the state owned telecom operator Why did so many countries liberalize in such a short period of time For example why did both Denmark and Burundi nations different along so many relevant dimensions liberalize their telecom sectors around the same time Kirsten L Rodine Hardy argues that international organizations not national governments or market forces are the primary drivers of policy convergence in the important arena of telecommunications regulation they create and shape preferences for reform and provide forums for expert discussions and the emergence of policy standards Yet she also

shows that international convergence leaves room for substantial variation among countries using both econometric analysis and controlled case comparisons of eight European countries
