**Object-oriented Programming - ECOOP'96**,1996      Object-Oriented Programming A Unified Foundation Giuseppe Castagna,2012-12-06 by Luea Cardelli Ever since Strachey s work in the 1960 s polymorphism has been classified into the parametric and overloading varieties Parametric polymorphism has been the subject of extensive study for over two decades Overloading on the other hand has often been considered too ad hoc to deserve much attention even though it has been in some form an ingredient of virtually every programming lan guage much more so than parametric polymorphism With the introduction of object oriented languages and in particular with multiple dispatch object oriented languages overloading has become less of a programming convenience and more of a fundamental feature in need of proper explanation This book provides a compelling framework for the study of run time over loading and of its interactions with subtyping and with parametric polymorphism The book also describes applications to object oriented programming This new framework is motivated by the relatively recent spread of programming languages that are entirely based on run time overloading this fact probably explains why this subject was not investigated earlier Once properly understood overloading reveals itself relevant also to the study of older and more conventional single dispatch object oriented languages clarifying delicate issues of covariance and contravariance of method types and of run time type analysis In the final chapters a synthesis is made between parametric and overloading polymorphism      Euro-Par '96 - Parallel Processing Luc Bouge,1996-08-14 Content Description Includes bibliographical references and index      ECOOP '96 Workshop on Prototype Based Object Oriented Programming Johannes Kepler University of Linz. Institute of Computer Science,1996      Metalevel Architectures and Separation of Crosscutting Concerns Akinori Yonezawa,Satoshi Matsuoka,2003-06-30 This volume constitutes the proceedings of REFLECTION 2001 the Third Int national Conference on Metalevel Architectures and Separation of Crosscutting Concerns which was held in Kyoto September 25 28 2001 Metalevel architectures and re ection have drawn the attention of researchers and practitioners throughout computer science Re ective and metalevel te niques are being used to

address real world problems in such areas as programming languages operating systems databases distributed computing expert systems and web computing Separation of concerns has been a guiding principle of software engineering for nearly 30 years but its known benefits are seldom fully achieved in practice This is primarily because traditional mechanisms are not powerful enough to handle many kinds of concerns that occur in practice Over the last 10 years to overcome the limitations of traditional frameworks many researchers including several from the reflection community have proposed new approaches For the first time papers on advanced approaches to separation of concerns were explicitly solicited Following the success of previous conferences such as IMSA 92 in Tokyo Reflection 96 in San Francisco and Reflection 99 in Saint Malo we hope that the conference provided an excellent forum for researchers with a broad range of interests in metalevel architectures reflective techniques and separation of concerns in general
