Extracellular Matrix Influences On Gene Expression:

Extracellular Matrix Influences on Gene Expression Harold Slavkin, 2012-12-02 Extracellular Matrix Influences on Gene Expression emerged from the Second international Santa Catalina Island Colloquium that deals with the discussion on the advances in the molecular biology of extracellular matrices and the epigenetic influences on cell function Topics discussed include morphological descriptions genetics teratology collagen heterogeneity and mineralization The book s 12 chapters discuss the chromosomal and extrachromosomal influences upon transcription translational and post translational regulations during development and regulation of extracellular matrix molecular biosynthesis The book describes the regulation of tissue specific collagen biosynthesis and the extracellular matrix macromolecules It contains papers that explain the outer cell surface specificity and cell interactions Because there are advances as well in other specific topics such as the epithelial mesenchymal interactions and extracellular matrix influences on gene expression this book contains papers that deal with these subject matters Furthermore it explains the matrix cell and cell matrix interactions and mineralization processes as well as the aberrations in developmental processes This book will be useful to those individuals who study the scientific advances in developmental biology Elastin and Elastases, Volume I Ladislav Robert, William

Hornebeck, 2021-05-30 Written by internationally known European and American scientists these volumes systematically present many topics in the elastin and elastases fields Volume I explains elastin its biosynthesis physicochemical properties and alteration in a variety of pathologies and with aging Volume II describes elastases their physiological and pathological roles and their control by natural and synthetic inhibitors Filled with illustrations and figures these volumes will benefit researchers physicians and industrial scientists **The Biology of Pulp and Dentine** L. Differentiation Marketa Karkinen-Jaaskelainen, 2012-12-02 Cell Interactions in Differentiation is a collection of papers presented at the Sixth Sigrid Juselius Foundation Symposium held in Helsinki Finland in August 1976 Contributors discuss cell interactions during differentiation particularly referring to the problem of embryonic induction They also consider how a

cell becomes adjusted to the synchronized development of an entire multicellular organism so as to express its genetic information at a strictly controlled time and place This volume is organized into five sections encompassing 30 chapters and begins with an overview of embryonic cells and their two fundamental properties Cells are not necessarily predetermined and can be experimentally diverted from their normal developmental pathway and those within an embryonic organism require extrinsic messages to express their developmental capacities The next chapters focus on early determinative events in embryogenesis touching on topics such as the genetic aspects of cell type determination interactions between embryonic cells during the early development of the mouse and the differentiation of teratocarcinoma stem cells in vitro The reader is then introduced to positional information and morphogenetic signals the biological specificity of morphogenetic tissue interactions and the molecular mechanisms underlying cell contact interactions The remaining chapters explore some of the most important conceptual and methodological approaches to the problems of cell cell recognition and the integration of cells into multicellular systems This book will be of interest to scientists and investigators in developmental biology and related fields

M.B. Mathews,2012-12-06 This book deals primarily with the principal extracellular macromolecules of animal connective tissues It attempts to answer some general questions about the biological organization of the tissues What is the nature of this organization at various dimensional levels What functions does the organization serve How has it evolved I have given major emphasis to the structures and properties of the macromolecular components of extracellular matrices from a wide range of invertebrates and vertebrates In doing so however I have treated cursorily many important aspects of connective tissue biology that appeared to be only indirectly relevant to the principal questions asked On the other hand I have not hesitated to search for broad biological principles outside the prevailing conceptual boundaries of animal connective tissues and the lower molecular dimensional levels The numerous speculations presented will I hope stimulate the reader to further thought and investigation Acknowledgements My previously unpublished data that have been included in this volume could not have been obtained without the generous gifts of specimens and other assistance by a number of individuals and institutions These are Dr G BERENSON of Louisiana State University Drs W P BRAKER and D ZUMWALD of the Shedd Aquarium Dr S H CHUANG of the University of Singapore Dr L G CLARK and Mr U M VARELA DIAZ of the University of Pennsylvania the Government of Nicaragua Dr E CLARK of Cape Haze Marine Laboratories Mr C E

The Biology of Skeletal Metastases Evan T. Keller,Leland W.K. Chung,2012-12-06 Metastasis to bone is a common event in cancer However due to the skeleton's unique structure exploring how cancer cells target the skeleton and interact with the bone microenvironment is challenging The Biology of Skeletal Metastases covers areas that are important to both clinicians and basic scientists seeking an enhanced understanding of mechanisms of skeletal

metastasis as well as descriptions of cutting edge therapies for skeletal metastases Both increased efforts by many investigators and advances in research methodologies have provided a wealth of information in the area of skeletal metastases The Biology of Skeletal Metastases brings together experts to describe these many advances This book provides background in basic bone biology and biology of metastasis for novice investigators and highlights many advances in this challenging field for the experienced investigator

Double-edged Swords: Genetic Factors That Influence the Pathogenesis of Both Metabolic Disease and Cancer Che-Pei Kung, Maureen E. Murphy, Hua Lu, 2019-09-23 Metabolic diseases and cancers account for half of all mortalities in the world underscoring the significance of understanding the etiology of these diseases and developing effective therapies Genomic research in the 21st century has brought cancer and metabolic disease two once seemingly parallel ailments as close to each other as they've ever been Many genetic factors have been found to display functions regulating both cancer and metabolic disease In this research topic Double edged Swords Genetic Factors That Influence The Pathogenesis of Both Metabolic Disease and Cancer you will be introduced to individual genes as well as genetic pathways that play important roles in influencing the progression of both metabolic disease and cancer By no means covering an exhaustive list of genes qualified this collection of articles rather serves as a precursor of what is yet to come in biomedical research It paints the big picture of one of the major fields contributing to the future of precision medicine

Abnormal Embryogenesis T.V.N. Persaud, 2012-12-06 The study of birth defects has assumed an importance even greater now than in the past because mortality rates attributed to congenital anomalies have declined far less than those for other causes of death such as infectious and nutritional diseases It is estimated that as many as 50% of all pregnancies terminate as miscarriages In the majority of cases this is the result of faulty development Major congenital malformations are found in at least 2% of all liveborn infants and 22% of all stillbirths and infant deaths are associated with severe congenital anomalies Teratological studies of an experimental nature are neither ethical nor justifiable in humans Numerous investigations have been carried out in laboratory animals and other experimental models in order to improve our understanding of abnormal intrauterine development In less than two decades the field of experimental teratology has advanced phenomenally As a result of the wide range of information that is now accumulating it has become possible to obtain an insight into the causes mechanisms and prevention of birth defects However considerable work will be needed before these problems can be resolved The contributions in this volume include some of the more recent and exciting observations on the cellular and molecular aspects of developmental defects It is not only a documentation of the latest experimental work but it also indicates new and important areas for future research
