

# Extranets

- Connect several intranets via the Internet, by adding a security mechanism and some additional functionalities
- They form a larger virtual network that allows remote users (*such as business partners or mobile employees*) to securely connect over the Internet to the enterprise's main intranet.
- **Extranets** are also employed by two or more enterprises (*suppliers & buyers*) to share information in a controlled fashion, and therefore they play a major role in the development of business-to-business electronic commerce and Supply Chain systems.

**Information and Communication Technologies in Tourism 1998** Dimitrios Buhalis,A

Min Tjoa, Jafar Jafari, 2012-12-06 Information and Telecommunication Technologies increasingly propel the tourism industry and have become one of the most important determinants of the competitiveness for both the public and the private sectors. It is quite evident that tourism organisations which fail to take advantage of the emergent opportunities introduced by technology will lose considerable market share and suffer strategic disadvantages. Business processes re-engineering is essential therefore throughout the tourism industry. Encouragingly, tourism organisations respond to the challenges and a large number of principals use technology in both operational and strategic functions. However, technology threatens traditional distribution channels with disintermediation. Non-tourism organisations also take advantage of the technological developments and launch services for tourism consumers and suppliers, increasing the competition for traditional operators. The tourism industry therefore emerges as a very dynamic one, and prospects are really exciting for professionals and researchers. Ultimately, virtual enterprises will dominate the tourism industry. They will produce cost-effective instantaneous mass customised goods and services, develop dynamic interfaces with suppliers and consumers and constantly reform their structures in order to satisfy consumer needs. They will also take advantage of lean and flexible organisational frameworks, advanced technology, interactive and innovative marketing and management, rapid reaction to market requests as well as effective networking and partnerships in order to provide more benefits for all stakeholders. ENTER adopted a consistent scientific approach to the study of tourism and technology. Over the last five years it brought together practitioners and researchers of both tourism and information technology.

### **The Complete Guide to IT Service Level Agreements**

Andrew Hiles, Hon FBCI, EIoSCM, 2016-06-01 Most suppliers lose around 16% of their customers each year. The reason? Poor service, whether perceived or real. Any technology-based support service, whether in-house, contracted or outsourced, stands to be accused of being insensitive to the requirements of its customers or users. Equally, customers of a support service may have unrealistic expectations of what can be reasonably provided. Service Level Agreements (SLAs) can overcome these gulfs. A Service Level Agreement can create harmony between parties and can prevent disputes between customers and suppliers. It can justify investment and identify the right quality of service. It can mean the difference between business success and failure. SLAs are potentially a strategic tool to align all support services, particularly IT, directly to business mission achievement. In the past few organizations used them in this way. Armed with this book and the companion SLA FRAMEWORK, more and more businesses are now succeeding. Where are SLAs going? Increasingly, business-focused. Increasingly measured in real time. Simple documents that cover complex service infrastructures. Providing a competitive edge. Embracing penalties. The brave who commit to tight SLAs and perform against them will win the commercial spoils. This book provides the knowledge and tools based on fifteen years of intensive development to ensure your enterprise is among the winners.
