Extraterrestrial Dust:

Extraterrestrial Dust Kazuo Yamakoshi, 1994 This monograph reports on the recent developments in the area of interplanetary and pre solar dust grains Chemical and isotope analyses of dust are discussed especially with the aim to study the origin and evolution of interplanetary dust Recent observations of extraterrestrial dust obtained with LDEF Galileo and Ulysses are presented Several velocity mechanisms for dust particles are discussed in addition to their impact on cosmic or cometary dust grain capture devices This volume is specially intended for research scientists and advanced graduate students in the fields of astronomy astrophysics and geo and cosmochemists Scientists in related fields like the environmental sciences especially researchers of artificial debris from rockets and boosters are also likely to be interested in this work

Exploring the Solar Wind Marian Lazar, 2012-03-21 This book consists of a selection of original papers of the leading scientists in the fields of Space and Planetary Physics Solar and Space Plasma Physics with important contributions to the theory modeling and experimental techniques of the solar wind exploration Its purpose is to provide the means for interested readers to become familiar with the current knowledge of the solar wind formation and elemental composition the interplanetary dynamical evolution and acceleration of the charged plasma particles and the guiding magnetic field that connects to the magnetospheric field lines and adjusts the effects of the solar wind on Earth I am convinced that most of the research scientists actively working in these fields will find in this book many new and interesting ideas

Catching Stardust Natalie Starkey, 2018-03-08

Astonishing New Scientist Icy rocky sometimes dusty always mysterious comets and asteroids are among the Solar System s very oldest inhabitants formed within a swirling cloud of gas and dust in the area of space that eventually hosted the Sun and its planets Locked within each of these extra terrestrial objects is the 4 6 billion year wisdom of Solar System events and by studying them at close quarters using spacecraft we can coerce them into revealing their closely guarded secrets This offers us the chance to answer some fundamental questions about our planet and its inhabitants Exploring comets and asteroids also allows us to shape the story of Earth s future enabling us to protect our precious planet from the threat of a catastrophic impact from space and maybe to even recover valuable raw materials from them This cosmic bounty could be as useful in space as it is on Earth providing the necessary fuel and supplies for humans as they voyage into deep space to explore more distant locations within the Solar System

Catching Stardust tells the story of these enigmatic celestial objects revealing how scientists are using them to help understand a crucial time in our history the birth of the Solar System and everything contained within it

Ice Ages and Astronomical Causes Richard A. Muller, Gordon J. MacDonald, 2002-08-26 It is not possible to understand the present or future climate unless scientists can account for the enormous and rapid cycles of glaciation that have taken place over the last million years and which are expected to continue into the future A great deal has happened in the theory of the ice ages over the last decade

and it is now widely accepted that ice ages are driven by changes in the Earth's orbit. The study of ice ages is very interdisciplinary, covering geology, physics, glaciology, oceanography, atmospheric science, planetary orbit calculations, astrophysics, and statistics. **Volcanism, Impacts, and Mass Extinctions: Causes and Effects** Gerta Keller, Andrew C.

Kerr, 2014-09-16. Comprises articles stemming from the March 2013 international conference at London's Natural History Museum. Researchers across geological, geophysical, and biological disciplines present key results from research concerning the causes of mass extinction events. Smithsonian Research Opportunities Smithsonian Institution. Office of Education and Training, 1967.

Forgotten Civilization Robert M. Schoch, 2021-03-02. Updated throughout with recent developments and additional illustrations. Reveals how solar outbursts caused the end of the last ice age, unleashed catastrophe upon ancient advanced civilizations, and led to six millennia of a Solar Induced Dark Age. Includes evidence from solar science, geology, oceanic circulation patterns, the Sphinx, the underground cities of Cappadocia, the Easter Island rongorongo glyphs, and the Gbekli Tepe complex in Turkey. In this newly revised and expanded edition, updated throughout with recent developments, geologist Robert Schoch builds upon his revolutionary theory that the origins of the Sphinx date back much further than 2500 BCE and examines scientific evidence of the catastrophe that destroyed early high culture nearly 12,000 years ago. Combining evidence from multiple scientific disciplines, Schoch makes the case that the abrupt end of the last ice age circa 9700 BCE was due to an agitated Sun. Solar outbursts unleashed electrical plasma discharges upon Earth, triggering dramatic climate change as well as increased earthquake and volcanic activity, fires, high radiation levels, and massive floods. Schoch explains how these events impacted the civilizations of the time, set humanity back thousands of years, and led to six millennia of a Solar Induced Dark Age (SIDA). Applying the SIDA framework to ancient history, he explores how many megalithic monuments, petroglyphs, indigenous traditions, and legends fall logically into place, including the underground cities of Cappadocia, the Easter Island rongorongo glyphs, and the Gbekli Tepe complex in Turkey. He also reveals that our Sun is a much more unstable star than previously believed, suggesting that history could repeat itself with a solar outburst powerful enough to devastate modern society. Weaving together a new view of the origins and antiquity of civilization and the dynamics of the planet we live on, Schoch maintains we must heed the megalithic warning of the past and collectively prepare for future events. **Atmosphere, Ocean and Climate Dynamics** John Marshall, R. Alan

Plumb, 1963-01-01. For advanced undergraduate and beginning graduate students in atmospheric, oceanic, and climate science. *Atmosphere, Ocean and Climate Dynamics* is an introductory textbook on the circulations of the atmosphere and ocean and their interaction, with an emphasis on global scales. It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way. The role of the oceans in climate and paleoclimate is also discussed. The combination of observations, theory, and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography. Written at a mathematical level that is

appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material

Environmental Nanopollutants Joanna Szpunar, Javier Jiménez-Lamana, 2022-11-14 Nanopollutants are nanoparticles that have escaped into the environment and can include engineered nanoparticles as well as nanoparticles that are products of degradation e.g. nanoplastics or other processes As many of these particles are only recently developed or described there is still a lot to learn about where they come from where they end up and what risks they pose to health and the environment Offering a wide overview of the most recent research on these emerging contaminants from the investigation of their sources and fate to the analytical developments for their detection and analysis this book gives the reader a full picture of the global research on engineered and natural nanoparticles in the environment Taking a forward looking perspective with chapters on new nanopollutants regulatory direction and occurrence in different environmental compartments this book is a great resource for anyone working in environmental chemistry nanoscience or environmental regulation

Formation and Evolution of Solids in Space J. Mayo Greenberg, Aigen Li, 2012-12-06 Interstellar dust meteorites interplanetary dust particles IDPs the zodiacal light comets comet dust Where do they come from what are they made of how do they evolve and finally are there connections between them These are the questions discussed in this volume by some of the world's outstanding experts in their respective fields The techniques used for studying the small solid objects of space are thoroughly discussed Some of the methods involve a synthetic approach using the laboratory to create analog environments and materials which are believed to resemble those in space Others use direct laboratory methods with state of the art analytical tools to study the material of the objects themselves meteorites IDPs And others apply the latest in astronomical facilities to provide quantitative data on the material properties of the solids which can only be deduced from remote observations These are compared with the laboratory results In one instance there was a possibility to study a solar system body in situ and that was the case of comet Halley and some of the results of these studies obtained from space laboratories launched to meet it are discussed here Finally there are theoretical papers which are aimed at bridging the results of observational and laboratory methods This book is recommended to senior scientists as well as graduate students who wish to pursue research in interstellar and solar system astronomy and their connections
