Extremal Paths In Graphs Foundations Search Strategies And Related Topics:

Extremal Paths in Graphs Ulrich Huckenbeck,1997 Shortest Connectivity Dietmar Cieslik,2004-11-19 The aim in this graduate level text is to outline the key mathematical concepts that underpin these important questions in applied mathematics These concepts involve discrete mathematics particularly graph theory optimization computer science and several ideas in biology **A Guide to the Literature on Semirings and their Applications in Mathematics and Information Sciences** K. Glazek,2013-06-29 This volume presents a short guide to the extensive literature concerning semirings along with a complete bibliography The literature has been created over many years in variety of languages by authors representing different schools of mathematics and working in various related fields In many instances the terminology used is not universal which further compounds the difficulty of locating pertinent sources even in this age of the Internet and electronic dissemination of research results So far there has been no single reference that could guide the interested scholar or student to the relevant publications This book is an attempt to fill this gap My interest in the theory of semirings began in the early sixties when together with Bogdan W glorz I tried to investigate some algebraic aspects of compactifications of topological spaces semirings of semicontinuous functions and the general ideal theory for special semirings Unfortunately local algebraists in Poland told me at that time that there was nothing interesting in investigating semiring theory because ring theory was still being developed However some time later we became aware of some similar investigations having already been done The theory of semirings has remained my first love ever since and I have been interested in the results in this field that have been appearing in literature even though I have not been active in this area myself **Forthcoming Books** Rose Arny,1997 **Integer Programming and Related Areas** R.v. Randow,2012-12-06 **American Book Publishing Record** ,1997-09 **Mathematical Reviews** ,2001 **International Books in Print** ,1986 **Integer Programming and Related Areas** Rabe v. Randow,2012-12-06 The fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing A classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the Institut fur Okonometrie und Operations Research of the University of Bonn The pioneering first volume was compiled by Claus Kastning during the years 1970 1975 and appeared in 1976 as Volume 128 of the series Lecture Notes in Economics and Mathematical Systems published by the Springer Verlag Work on the project was continued by Dirk Hausmann Reinhardt Euler and Rabe von Randow and resulted in the publication of the second third and fourth volumes in 1978 1982 and 1985 Volumes 160 197 and 243 of the above series The present book constitutes the fifth volume of the bibliography and covers the period from autumn 1984 to the end of 1987 It contains 5864 new publications by 4480 authors and was compiled by Rabe von Randow Its form is practically identical to that of the first four volumes some additions having been made to the subject list **Integer Programming and Related Areas**

News, 1997 Erdős Centennial László Lovász, Imre Ruzsa, Vera T. Sós, 2014-01-24 Paul Erdős was one of the most
 influential mathematicians of the twentieth century whose work in number theory combinatorics set theory analysis and
 other branches of mathematics has determined the development of large areas of these fields In 1999 a conference was
 organized to survey his work his contributions to mathematics and the far reaching impact of his work on many branches of
 mathematics On the 100th anniversary of his birth this volume undertakes the almost impossible task to describe the ways in
 which problems raised by him and topics initiated by him indeed whole branches of mathematics continue to flourish Written
 by outstanding researchers in these areas these papers include extensive surveys of classical results as well as of new
 developments **Research Trends in Combinatorial Optimization** William J. Cook, László Lovász, Jens Vygen, 2008-11-07
 The editors and authors dedicate this book to Bernhard Korte on the occasion of his seventieth birthday We the editors are
 happy about the overwhelming feedback to our initiative to honor him with this book and with a workshop in Bonn on
 November 3-7 2008 Although this would be a reason to look back we would rather like to look forward and see what are the
 interesting research directions today This book is written by leading experts in combinatorial optimization All papers were
 carefully reviewed and eventually twenty three of the invited papers were accepted for this book The breadth of topics is
 typical for the field combinatorial optimization builds bridges between areas like combinatorics and graph theory submodular
 functions and matroids network flows and connectivity approximation algorithms and mathematical programming computational
 geometry and polyhedral combinatorics All these topics are related and they are all addressed in this book Combinatorial
 optimization is also known for its numerous applications To limit the scope however this book is not primarily about
 applications although some are mentioned at various places Most papers in this volume are surveys that provide an excellent
 overview of an active research area but this book also contains many new results Highlighting many of the currently most
 interesting research directions in combinatorial optimization we hope that this book constitutes a good basis for future
 research in these areas Random Graphs Béla Bollobás, 2001-08-30 This is a revised and updated version of the classic
 first edition **Integer Programming and Related Areas** Rabe Randow, Universität Bonn. Institut für Ökonometrie und
 Operations Research, 1990 Strategies for Sequential Search and Selection in Real Time F. Thomas Bruss, 1992 This
 volume contains the proceedings of the MS IMS SIAM Joint Summer Research Conference on Strategies for Sequential
 Search and Selection in Real Time held in June 1990 at the University of Massachusetts at Amherst The conference focused
 on problems related to sequential observation of random variables and selection of actions in real time This book will provide

readers with a feeling for the breadth and depth of contemporary research in these areas Taming the Infinities of Concurrency Stefan Kiefer, Jan Křetínský, Antonín Kučera, 2024-03-19
