The SAGE Deaf Studies

Encyclopedia Genie Gertz, Patrick Boudreault, 2016-01-05 The time has come for a new in depth encyclopedic collection of articles defining the current state of Deaf Studies at an international level and using the critical and intersectional lens encompassing the field The emergence of Deaf Studies programs at colleges and universities and the broadened knowledge of social sciences including but not limited to Deaf History Deaf Culture Signed Languages Deaf Bilingual Education Deaf Art and more have served to expand the activities of research teaching analysis and curriculum development The field has experienced a major shift due to increasing awareness of Deaf Studies research since the mid 1960s The field has been further influenced by the Deaf community's movement resistance activism and politics worldwide as well as the impact of technological advances such as in communications with cell phones computers and other devices A major goal of this new encyclopedia is to shift focus away from the Medical Pathological Model that would view Deaf individuals as needing to be fixed in order to correct hearing and speaking deficiencies for the sole purpose of assimilating into mainstream society By contrast The Deaf Studies Encyclopedia seeks to carve out a new and critical perspective on Deaf Studies with the focus that the Deaf are not a people with a disability to be treated and cured medically but rather are members of a distinct cultural group with a distinct and vibrant community and way of being

Innovations in Deaf Studies Annelies Kusters, Maartje De Meulder, Dai O'Brien, 2017-04-14 What does it mean to engage in Deaf Studies and who gets to define the field What would a truly deaf led Deaf Studies research program look like What are the research practices of deaf scholars in Deaf Studies and how do they relate to deaf research participants and communities What innovations do deaf scholars deem necessary in the field of Deaf Studies In Innovations in Deaf Studies The Role of Deaf Scholars volume editors Annelies Kusters Maartje De Meulder and Dai O'Brien and their contributing authors tackle these questions and more Spurred by a gradual increase in the number of Deaf Studies scholars who are deaf and by new theoretical trends in Deaf Studies this book creates an important space for contributions from deaf researchers to see what happens when they enter into the conversation Innovations in Deaf Studies expertly foregrounds deaf ontologies defined as deaf ways of being and how the experience of being deaf is central not only to deaf research participants own ontologies but also to the positionality and framework of the study as a whole Further this book demonstrates that the research and methodology built around those ontologies offer suggestions for new ways for the discipline to meet the challenges of the present which includes productive and ongoing collaboration with hearing researchers Providing fascinating perspective and insight Kusters De Meulder O'Brien and their

contributors all focus on the underdeveloped strands within Deaf Studies particularly on areas around deaf people's communities, ideologies, literature, religion, language practices and political aspirations **Hand in Hand** Diane P.

volume brings together the work of 32 scholars from 13 countries investigations of children learning 15 different languages in some instances more than one at a time The scope of this work as broad as it is only partially represents the research interests and approaches of the more than 350 scholars from 34 countries who contributed papers or posters to the Sixth International Congress for the Study of Child Language This investigative power and diversity are for the most part focused on topics and issues of modern day child language research that have been under discussion for the last 30 years or so Some even go beyond that in early diary studies and philosophers' speculations While the issues are mainly familiar ones the 17 chapters contribute to the advancement of child language study in several specific ways They represent current theoretical frameworks both bringing the insights of the theories to the interpretation of language development and testing tenets or

implications of the theories with child language data contribute substantively to the crosslinguistic study of child language reflecting both the linguistic diversity of the authors themselves and a recent major shift in the approach to child language study build on the now considerable body of knowledge about children's language both adding to information about the basic systems of phonology syntax and semantics and extending beyond to explore aspects of narrative and literacy development language acquisition by bilingual and atypical children and language processing and contain hints of new directions in child language study such as increased attention to the impact of phonology on other language systems Taken as a whole this volume reflects the current strength of crosslinguistic research the application and testing of new theoretical developments a new legitimacy of language disorder data and a new appeal to the descriptive possibilities of language processing models In addition there is a theme that runs through many of the chapters and points the way for important research in the future the role of prosody in the acquisition of various language structures and systems
