UN Millennium Development Library: Innovation UN Millennium Project, 2013-06-17 The Millennium Development Goals adopted at the UN Millennium Summit in 2000 are the world's targets for dramatically reducing extreme poverty in its many dimensions by 2015 income poverty hunger disease exclusion lack of infrastructure and shelter while promoting gender equality education health and environmental sustainability These bold goals can be met in all parts of the world if nations follow through on their commitments to work together to meet them Achieving the Millennium Development Goals offers the prospect of a more secure just and prosperous world for all The UN Millennium Project was commissioned by United Nations Secretary General Kofi Annan to develop a practical plan of action to meet the Millennium Development Goals As an independent advisory body directed by Professor Jeffrey D Sachs the UN Millennium Project submitted its recommendations to the UN Secretary General in January 2005 The core of the UN Millennium Project's work has been carried out by 10 thematic Task Forces comprising more than 250 experts from around the world including scientists development practitioners parliamentarians policymakers and representatives from civil society UN agencies the World Bank the IMF and the private sector This report argues that meeting the Millennium Development Goals will require a substantial reorientation of development policies to focus on key sources of economic growth particularly the use of scientific and technological knowledge and related institutional adjustments It outlines key areas for policy action including focusing on platform or generic technologies defining infrastructure services as a foundation for technology improving higher education in science and placing universities at the center of local development spurring entrepreneurial activities improving the policy environment and focusing on areas of underfunded research for development

Progress in Ceramic Science J. E. Burke, 2016-07-04 Progress in Ceramic Science Volume 4 is a collection of papers reviewing the electrical and magnetic properties of ceramics the fabrication techniques and the effects of radiation on glasses The book discusses the radiation effects in quartz silica and glasses focusing on the following 1 the basic Si O network 2 impurities substitutional for silicon and 3 alkali and hydrogen as the prime sources for non bridging oxygen The text then explains the process of pressure sintering of ceramics to achieve pressure bonding microstructural control composite fabrication and enhanced densification One paper also discusses the theory on the relationship between the magnetic properties of non metallic transition metal oxides and crystal chemistry The book evaluates the non stoichiometric or flux melt techniques that are used in growing high quality single crystals found in electronic devices This topic includes the benefits of the techniques and an outline of the principles of flux growth The electrical conduction mechanisms in oxides are then addressed emphasizing the chemical approach through equations that are commonly found in chemistry The book therefore addresses ionic conduction and mixed electrolytic and electronic conductors and then reviews the fundamental equation that applies to all conduction processes The book can prove valuable
