two EIDMA mini courses on Computer Algebra were given at the Eindhoven University of Technology by apart from ourselves various invited lecturers EIDMA is the Research School Euler Institute for Discrete Mathematics and its Applications The idea of the courses was to acquaint young mathematicians with algorithms and software for mathematical research and to enable them to incorporate algorithms in their research A collection of lecture notes was used at these courses When discussing these courses in comparison with other kinds of courses one might give in a week s time Joachim Neub ser referred to our courses as tapas This denomination underlined that the courses consisted of appetizers for various parts of algorithmic algebra indeed we covered such spicy topics as the link between Gr bner bases and integer programming and the detection of algebraic solutions to differential equations As a collection the notes turned out to have some appeal of their own which is the main reason why the idea came up of transforming them into book form We felt however that the book should be distinguishable from a standard text book on computer algebra in that it retains its appetizing flavour by presenting a variety of topics at an accessible level with a view to recent developments Geometric Modeling: Theory and Practice

Nkwake,2019-11-27 This book discusses the crucial place that assumptions hold in conceptualizing implementing and evaluating development programs It suggests simple ways for stakeholders and evaluators to 1 examine their assumptions about program theory and environmental conditions and 2 develop and carry out effective program monitoring and evaluation in light of those assumptions A survey of evaluators from an international development agency reviewed the state of practice on assumptions aware evaluation This 2nd edition has been updated with further illustrations case studies and frameworks that have been researched and tested in the years since the first edition Regardless of geography or goal development programs and policies are fueled by a complex network of implicit ideas Stakeholders may hold assumptions about purposes outcomes methodology and the value of project evaluation and evaluators which may or may not be shared by the evaluators A major barrier to viable program evaluations is that development programs are based on assumptions that often are not well articulated In designing programs stakeholders often lack clear outlines for how implemented interventions will bring desired changes This lack of clarity masks critical risks to program success and makes it challenging to evaluate such programs Methods that have attempted to address this dilemma have been popularized as theory of change or other theory based approaches Often however theory based methods do not sufficiently clarify how program managers or evaluators should work with the assumptions inherent in the connections between the steps The critical examination of assumptions in evaluation is essential for effective evaluations and evaluative thinking How does one think evaluatively It all begins with assumptions Systematically articulating examining and testing
