Extensions Of Logic Programming Lecture Notes In Artificial Intelligence Volume 66:

Extensions of Logic Programming Evelina Lamma,Paola Mello,1993-02-12 This book contains papers which investigate how to extend logic programming toward the artificial intelligence and software engineering areas covering both theoretical and practical aspects Some papers investigate topics such as abductive reasoning and negation Some works discuss how to enhance the expressive power of logic programming by introducing constraints sets and integration with functional programming Other papers deal with the structuring of knowledge into modules taxonomies and objects withthe aim of extending logic programming toward software engineering applications A section is devoted to papers concentrating on proof theory and inspired by Gentzen style sequent or natural deduction systems Topics such as concurrency are considered to enhance the expressive power of logic languages Finally some papers mainly concernimplementation techniques for some of these logic programming extensions **Artificial Intelligence Today** Michael J. Wooldridge,Manuela Veloso,2007-03-06 Artificial Intelligence is one of the most fascinating and unusual areas of academic study to have emerged this century For some AI is a true scientific discipline that has made important and fundamental contributions to the use of computation for our understanding of nature and phenomena of the human mind for others AI is the black art of computer science Artificial Intelligence Today provides a showcase for the field of AI as it stands today The editors invited contributions both from traditional subfields of AI such as theorem proving as well as from subfields that have emerged more recently such as agents AI and the Internet or synthetic actors The papers themselves are a mixture of more specialized research papers and authorative survey papers The secondary purpose of this book is to celebrate Springer Verlag s Lecture Notes in Artificial Intelligence series *Logic for Programming, Artificial Intelligence, and Reasoning* Matthias Baaz,Andrei Voronkov,2002-10-02 Apartfromtheprogrammecomittee wewouldalsoliketothanktheother people who made LPAR 2002 possible the additional referees and the local arrangementschairsKhimuriRhukia KotePhakadze GelaChankvetadze and JemalAntidze TheInternet basedsubmissionsoftwareandtheprogramcommitteedisc sionsoftwarewereprovidedbythesecondco chair Evolving Knowledge Bases João Alexandre Leite,2003 An Evolving Knowledge Base EKB is capable of self evolution by means of its internally specified behaviour In this thesis the author incrementally specifies semantically characterizes and illustrates with examples the concepts and tools necessary to the development of EKBs **Logic Programming and Nonmonotonic Reasoning** Michael Gelfond,Nicole Leone,Gerald Pfeifer,1999-11-11 This book constitutes the refereed proceedings of the 5th International Conference on Logic Programming and Nonmonotonic Reasoning LPNMR 99 held in El Paso Texas USA in December 1999 The volume presents 26 contributed papers and four invited talks three appearing as extended abstracts and one as a full paper Topics covered include logic programming non monotonic reasoning knowledge representation semantics complexity expressive power and implementation and applicatons **Computer Science Logic** Julian Bradfield,2003-08-02 The Annual Conference of the

European Association for Computer Science Logic CSL 2002 was held in the Old College of the University of Edinburgh on 22 25 September 2002 The conference series started as a programme of Int national Workshops on Computer Science Logic and then in its sixth meeting became the Annual Conference of the EACSL This conference was the sixteenth meeting and eleventh EACSL conference it was organized by the Laboratory for Foundations of Computer Science at the University of Edinburgh The CSL 2002 Programme Committee considered 111 submissions from 28 countries during a two week electronic discussion each paper was refereed by at least three reviewers The Committee selected 37 papers for presentation at the conference and publication in these proceedings The Programme Committee invited lectures from Susumu Hayashi Frank Neven and Damian Niwinski the papers provided by the invited speakers appear at the front of this volume In addition to the main conference two tutorials Introduction to Mu Calculi Julian Brad eld and Parametrized Complexity Martin Grohe were given on the previous day *Advances in Artificial Intelligence - SBIA 2004* Ana L. C. Bazzan,Sofiane Labidi,2004-09-20 This book constitutes the refereed proceedings of the 17th Brazilian Symposium on Artificial Intelligence SBIA 2004 held in Sao Luis Maranhao Brazil in September October 2004 The 54 revised full papers presented were carefully reviewed and selected from 208 submissions from 21 countries The papers are organized in topical sections on logics planning and theoretical methods search reasoning and uncertainty knowledge representation and ontologies natural language processing machine learning knowledge discovery and data mining evolutionary computing artificial life and hybrid systems robotics and compiler vision and autonomous agents and multi agent systems **Logic, Language and Reasoning** Hans Jürgen Ohlbach,U. Reyle,2012-12-06 th This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995 Dov is one of the most outstanding and most productive researchers we have ever met He has exerted a profound influence in major fields of logic linguistics and computer science His contributions in the areas of logic language and reasoning are so numerous that a comprehensive survey would already fill half of this book Instead of summarizing his work we decided to let him speak for himself Sitting in a car on the way to Amsterdam airport he gave an interview to Jelle Gerbrandy and Anne Marie Mineur This recorded conversation with him which is included gives a deep insight into his motivations and into his view of the world the Almighty and of course the role of logic In addition this volume contains a partially annotated bibliography of his main papers and books The length of the bibliography and the broadness of the topics covered there speaks for itself *Reasoning with Actual and Potential Contradictions* Dov M. Gabbay,Philippe Smets,1998-10-31 This volume deals with approaches to handling contradictory information These include approaches for actual contradiction both A and not A can be proven from the information and approaches for potential contradiction where the information may contain arguments for A and arguments for not A but the system suppresses the contradiction by for example preferring some arguments over others Approaches covered include paraconsistent logics modal logics default logics conditional logics defeasible logics and paraconsistent semantics for logic programming The volume is of interest to

students researchers and practitioners in artificial intelligence software engineering logic language and philosophy This volume is the first handbook to give a comprehensive coverage of handling contradictory information **Frontiers of Combining Systems** Bernhard Gramlich,2005-09-14 This book constitutes the refereed proceedings of the 5th International Workshop on Frontiers of Combining Systems FroCoS 2005 held in Vienna Austria in September 2005 The 19 revised full papers presented including 2 system descriptions were carefully reviewed and selected from 28 submissions The papers are organized in topical sections on combinations of logics theories and decision procedures constraint solving and programming combination issues in rewriting and programming as well as in logical frameworks and theorem proving systems *Logic for Programming, Artificial Intelligence, and Reasoning* Franz Baader,Andrei Voronkov,2005-02-09 This book constitutes the refereed proceedings of the 11th International Conference on Logic for Programming Artificial Intelligence and Reasoning LPAR 2004 held in Montevideo Uruguay in March 2005 The 33 revised full papers presented together with abstracts of 4 invited papers were carefully reviewed and selected from 77 submissions The papers address all current issues in logic programming automated reasoning and AI logics in particular description logics fuzzy logic linear logic multi modal logic proof theory formal verification protocol verification constraint logic programming programming calculi theorem proving etc **Handbook of Modal Logic** Patrick Blackburn,Johan F.A.K. van Benthem,Frank Wolter,2006-11-03 The Handbook of Modal Logic contains 20 articles which collectively introduce contemporary modal logic survey current research and indicate the way in which the field is developing The articles survey the field from a wide variety of perspectives the underling theory is explored in depth modern computational approaches are treated and six major applications areas of modal logic in Mathematics Computer Science Artificial Intelligence Linguistics Game Theory and Philosophy are surveyed The book contains both well written expository articles suitable for beginners approaching the subject for the first time and advanced articles which will help those already familiar with the field to deepen their expertise Please visit http people uleth ca woods RedSeriesPromo_WP PubSLPR html Compact modal logic reference Computational approaches fully discussed Contemporary applications of modal logic covered in depth Practical Aspects of Declarative Languages Shriram Krishnamurthi,C.R. Ramakrishnan,2003-06-30 Declarative languages build on sound theoretical bases to provide attractive frameworks for application development These languages have been succe fully applied to a wide variety of real world situations including database m agement active networks software engineering and decision support systems New developments in theory and implementation expose fresh opportunities At the same time the application of declarative languages to novel problems raises numerous interesting research issues These well known questions include scalability language extensions for application deployment and programming environments Thus applications drive the progress in the theory and imp mentation of declarative systems and in turn bene t from this progress The International Symposium on Practical Applications of Declarative L guages PADL provides a forum for researchers practitioners and implementors of declarative

languages to exchange ideas on current and novel application eas and on the requirements for e ective use of declarative systems The fourth PADL symposium was held in Portland Oregon on January 19 and 20 2002 *Encyclopedia of Microcomputers* Allen Kent,James G. Botía,D. Charitos,2013-07-26 Intelligent Environments IE play an increasingly important role in many areas of our lives including education healthcare and the domestic environment The term refers to physical spaces incorporating pervasive computing technology used to achieve specific goals for the user the environment or both This book presents the proceedings of the workshops of the 9th International Conference on Intelligent Environments IE 13 held in Athens Greece in July 2013 The workshops which were presented in the context of this conference range from regular lectures to practical sessions They provide a forum for scientists researchers and engineers from both industry and academia to engage in discussions on newly emerging or rapidly evolving topics in the field Topics covered in the workshops include artificial intelligence techniques for ambient intelligence applications of affective computing in intelligent

environments smart offices and other workplaces intelligent environment technology in education for creative learning museums as intelligent environments the application of intelligent environment technologies in the urban context for creating more sociable intelligent cities and for constructing urban intelligence IE can enrich user experience better manage the environment s resources and increase user awareness of that environment This book will be of interest to all those whose work involves the application of intelligent environments **Handbook of Temporal Reasoning in Artificial Intelligence** Michael David Fisher,Dov M. Gabbay,Lluis Vila,2005-03-01 This collection represents the primary reference work for researchers and students in the area of Temporal Reasoning in Artificial Intelligence Temporal reasoning has a vital role to play in many areas particularly Artificial Intelligence Yet until now there has been no single volume collecting together the breadth of work in this area This collection brings together the leading researchers in a range of relevant areas and provides an coherent description of the breadth of activity concerning temporal reasoning in the filed of Artificial Intelligence Key Features Broad range foundations techniques and applications Leading researchers around the world have written the chapters Covers many vital applications Source book for Artificial Intelligence temporal reasoning Approaches provide foundation for many future software systems Broad range foundations techniques and applications Leading researchers around the world have written the chapters Covers many vital applications Source book for Artificial Intelligence temporal reasoning Approaches provide foundation for many future software systems **Johan van Benthem on Logic and Information Dynamics** Alexandru Baltag,Sonja Smets,2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem s pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem s work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived

exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations
