course for the FEMA Higher Education project Preparedness and Response for Catastrophic Disasters provides important insight into plans to mitigate and respond to the devastation caused by large scale catastrophic events Hurricane Katrina provided clear evidence that these occurrences are both qualitatively and quantitatively different from other disasters Recent tragedies like the 2004 South Asia tsunami the 2010 earthquake in Haiti and the 2011 earthquake tsunami and resulting nuclear plant meltdown in Japan further illustrate that we are not prepared for such events Written by top disaster scholars and practitioners the book defines what constitutes a catastrophic event outlining both the factors that can lead to catastrophes and the unique logistical planning and response challenges posed by them Distinct from general disasters these events are termed catastrophic due to the regional impact impacts to logistics and infrastructure the devastating effects on large scale populations and the ripple effects on regional and global economies Preparedness and Response for Catastrophic Disasters examines why catastrophes must be approached differently If governments public administrators and emergency management professionals are to succeed in protecting our populations there must be consensus decisiveness and leadership in both the coordination and response In addition there must be a fundamental recognition that catastrophic events compromise the very infrastructure public utilities delivery of goods and service schools business functions and government that supports communities and upon which modern society is based As such the book explores how catastrophes can dramatically affect populations and addresses new innovative and fundamentally unique strategies communities can institute to better prepare populations for catastrophic events and their aftermath

Handbook of Disaster and Emergency Management. First Edition Amir Khorram-Manesh, 2017-10-10 We propose here a comprehensive educational program based on the best available evidence to date drawn from recent publications intended to impart the knowledge skills and abilities necessary for the role of crisis manager We expect this program to enhance the intercultural and interagency performance across the Disaster Management DM cycle Here Intercultural does not refer to different nations and cultural backgrounds but rather to working cultures within diverse agencies Since communication and information shortcomings are the most common reason for failed DM this educational program focuses heavily on collaboration and interoperability between trained professionals involved in disaster response to ensure that they understand the need for collaboration and are aware of each other's limitations and possibilities The aim of programs such as this is not to re educate people in respect to their profession area of expertise but rather to train them in elements specific to DM and ways in which they can apply their existing knowledge and professional expertise in the disaster context Such multidisciplinary programs cover all disaster phases accommodate the needs of each organization and offer a safe environment where participants are able to learn by doing in an interactive environment vertically within their own organization and horizontally together with other organizations by focusing on shared training cooperation and intercultural understanding Such programs bring some degree of standardization and offer a thorough evaluation of participants and the program by using evidence based scientific

methods One important part of the program is to offer a standardized handbook in which all necessary information is gathered This is not intended as a substitute for reference books but it is intended to make the information accessible and easy to learn so that the information can be combined with the practical parts of the education

Flood Risk Science and Management Gareth Pender, Hazel Faulkner, 2010-12-01 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years Worldwide there has been a move from a strategy of flood defence to one of flood risk management Flood risk management includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics Its targeted readership is the international research community from research students through to senior staff and flood management professionals such as engineers planners government officials and those with flood management responsibility in the public sector By using the concept of case study chapters international coverage is given to the topic ensuring a world wide relevance

Ebi, Ian Burton, Glenn McGregor, 2008-12-17 Biometeorology continues to grow as a discipline It is increasingly recognised for its importance in providing science of relevance to society and well being of the environment This book is the first in a new book series on Biometeorology The purpose of the new series is to communicate the interdisciplinary philosophy and science of biometeorology to as wide an audience as possible introduce scientists and policy makers to the societal relevance of and recent developments in its fields and demonstrate how a biometeorological approach can provide insights to the understanding and possible solution of cross cutting environmental issues One such cross cutting environmental issue is climate change While the literature on the science of climate change climate change mitigation and the impacts of climate change is voluminous that on adaptation to climate change is meagre in comparison The purpose of this book is to partly redress this imbalance by providing insights from a biometeorological perspective The book acknowledges that society has a long history of adapting to the impacts associated with climatic variability and change but makes the point that climate

change poses a real threat to already strained coping systems Therefore there is a need to realign human use systems with changing climate conditions
