Vision and Brain James V. Stone, 2012-09-21 An engaging introduction to the science of vision that offers a coherent account of vision based on general information processing principles In this accessible and engaging introduction to modern vision science James Stone uses visual illusions to explore how the brain sees the world Understanding vision Stone argues is not simply a question of knowing which neurons respond to particular visual features but also requires a computational theory of vision Stone draws together results from David Marr s computational framework Barlow s efficient coding hypothesis Bayesian inference Shannon s information theory and signal processing to construct a coherent account of vision that explains not only how the brain is fooled by particular visual illusions but also why any biological or computer vision system should also be fooled by these illusions This short text includes chapters on the eye and its evolution how and why visual neurons from different species encode the retinal image in the same way how information theory explains color aftereffects how different visual cues provide depth information how the imperfect visual information received by the eye and brain can be rescued by Bayesian inference how different brain regions process visual information and the bizarre perceptual consequences that result from damage to these brain regions The tutorial style emphasizes key conceptual insights rather than mathematical details making the book accessible to the nonscientist and suitable for undergraduate or postgraduate study

Relearning to See Thomas R.

Quackenbush, 2000-01-24 In this accessible presentation of the famous Bates method Thomas R Quackenbush who teaches the Bates method in California and Oregon describes how eyesight can improve naturally at any age and regardless of heredity This book is a wonderful tribute to the genius of Dr Bates who was a pioneer in discovering how vision becomes blurred and how it restores itself naturally to clarity and acuity Now 80 years later his findings and teachings remain light years ahead of our contemporaries His approach to treating vision problems was truly holistic and the theme throughout this book is very much an extension of that holistic approach Dr Quackenbush is to be commended for his dedication in getting

the truth out and keeping the torch burning in this bible on vision improvement Active Vision John M Findlay,Iain D Gilchrist,2003-08-07 This title focuses on vision as an active process rather than a passive activity and provides an integrated account of seeing and looking The authors give a thorough description of basic details of the visual and oculomotor systems necessary to understand active vision **Cosmology, Physics and Philosophy** Benjamin Gal-Or,2013-04-18 by Sir Karl Popper This is a great book and an exciting book I say so even though I happen to disagree with the author in many minor points and one or two major points Some of the minor points are merely terminological and therefore very minor I dislike the term dialectic because of its use since Hegel and Marx and I dislike the term gravitism perhaps without a good reason Thus I dislike the name which Professor Gal Or has given to his theory But the theory seems to me a great and a very beautiful theory so far as I can judge Other minor points of disagreement are connected with Gal Or's original and remarkable views of the great philosophers including Spinoza and Kant A major point of disagreement is that Gal Or following Einstein is a scientific determinist while I cannot but regard determinism as a modern superstition Of course he may be right and I may be completely mistaken I mention these critical points rather in order to emphasize how strongly I am impressed by Professor Gal Or's great book Even in the very unlikely case that wherever we disagree he should be in the wrong and I right even if that should be the case which is improbable in the extreme it would remain a great book readable worth reading and enlightening with a most fascinating cosmological story of time expansion and gravitation Brains Dale Purves,2010-01-08 For 50 years the world's most brilliant neuroscientists have struggled to understand how human brains really work Today says Dale Purves the dominant research agenda may have taken us as far as it can and neuroscientists may be approaching a paradigm shift In this highly personal book Purves reveals how we got to this point and offers his notion of where neuroscience may be headed next Purves guides you through a half century of the most influential ideas in neuroscience and introduces the extraordinary scientists and physicians who created and tested them Purves offers a critical assessment of the paths that neuroscience research has taken their successes and their limitations and then introduces an alternative approach for thinking about brains Building on new research on visual perception he shows why common ideas about brain networks can't be right and uncovers the factors that determine our subjective experience The resulting insights offer a deeper understanding of what it means to be human Why we need a better conception of what brains are trying to do and how they do it Approaches to understanding the brain over the past several decades may be at an impasse The surprising lessons that can be learned from what we see How complex neural processes owe more to trial and error experience than to logical principles Brains and the people who think about them Meet some of the extraordinary individuals who've shaped neuroscience The ghost in the machine problem The ideas presented further undermine the concept of free will *Israelis and Palestinians* Jonathan Glover,2023-12-19 Can Israelis and Palestinians end their long conflict The shocking violence of current events undermines hope as does the long history of peace deals sabotaged by extremists on both sides In this

compelling and timely book the eminent moral philosopher Jonathan Glover argues that one vital step towards progress is to better understand the disturbing psychology of the cycle of violence Glover explores the psychological flaws that entrap both sides the urge to respond to wounds or humiliation with backlash political or religious beliefs held with a rigidity that excludes compromise and people s identity being shaped by the conflict in ways that make it harder to imagine or even desire alternatives Drawing on the history of comparable conflicts that eased over time Glover proposes some ways to gradually weaken the grip of this psychology Completed as casualties mounted in the latest political and humanitarian crisis Israelis and Palestinians is essential reading for anyone concerned by the ongoing violence in the Middle East Also available as an audiobook
