Eye Tracking Kenneth Holmqvist, Marcus Nyström, Richard Andersson, Richard Dewhurst, Halszka Jarodzka, Joost van de Weijer, 2011-09-22 We make 3 5 eye movements per second and these movements are crucial in helping us deal with the vast amounts of information we encounter in our everyday lives In recent years thanks to the development of eye tracking technology there has been a growing interest in monitoring and measuring these movements with a view to understanding how we attend to and process the visual information we encounter Eye tracking as a research tool is now more accessible than ever and is growing in popularity amongst researchers from a whole host of different disciplines Usability analysts sports scientists cognitive psychologists reading researchers psycholinguists neurophysiologists electrical engineers and others all have a vested interest in eye tracking for different reasons The ability to record eye movements has helped advance our science and led to technological innovations However the growth of eye tracking in recent years has also presented a variety of challenges in particular the issue of how to design an eye tracking experiment and how to analyse the data This book is a much needed comprehensive handbook of eye tracking methodology It describes how to evaluate and acquire an eye tracker how to plan and design an eye tracking study and how to record and analyse eye movement data Besides technical details and theory the heart of this book revolves around practicality how raw data samples

are converted into fixations and saccades using event detection algorithms how the different representations of eye movement data are calculated using AOIs heat maps and scanpaths and how all the measures of eye movements relate to these processes Part I presents the technology and skills needed to perform high quality research with eye trackers Part II covers the predominant methods applied to the data which eye trackers record These include the parsing of raw sample data into oculomotor events and how to calculate other representations of eye movements such as heat maps and transition matrices Part III gives a comprehensive outline of the measures which can be calculated using the events and representations described in Part II This is a taxonomy of the measures available to eye tracking researchers sorted by type of movement of the eyes and type of analysis For anyone in the sciences considering conducting research involving eye tracking this book will be an essential reference work

Eye movement research : mechanisms, processes and applications John Malcolm Findlay, Robert W. Kentridge, Robin Walker, 1995

Current Trends in Eye Tracking Research Mike Horsley, Matt Eliot, Bruce Allen Knight, Ronan Reilly, 2013-12-11 Our eye movements in response to visual stimuli reveal much about how we experience the world Focusing on the latest developments in the multidisciplinary field of eye tracking research this volume ranges across a wide spectrum of research applications with four sections covering the plethora of practical uses to which our expanding knowledge can be put They offer abundant evidence that eye tracking research and its methodologies offer new ways of collecting data framing research questions and thinking about how we view our world As a result we are discovering more about how the visual system works as well as how it interacts with attention cognition and behaviour Current Trends in Eye Tracking Research presents the work of more than 50 researchers and academics showcasing groundbreaking studies and innovative ways of applying eye tracking technologies to interesting research problems The book covers the current output of a number of pioneering research laboratories detailing their work on eye tracking and the visual system alignment and EEG data marketing and social applications and eye tracking in education Featuring creative uses of existing technology as well as inventive implementation of new technology in a range of research contexts and disciplines this new publication is compelling proof of the growing importance of this exciting and fast moving area of scientific endeavor

Eye Movements Roger PG van Gompel, 2007-03-27 Eye movement recording has become the method of choice in a wide variety of disciplines investigating how the mind and brain work This volume brings together recent high quality eye movement research from many different disciplines and in doing so presents a comprehensive overview of the state of the art in eye movement research Sections include the history of eye movement research physiological and clinical studies of eye movements transsaccadic integration computational modelling of eye movements reading spoken language processing attention and scene perception and eye movements in natural environments Includes recent research from a variety of disciplines Divided into sections based on topic areas with an overview chapter beginning each section Through the study of eye movements we can learn about the human mind and eye movement recording has

become the method of choice in many disciplines

Eye Movements and Information Processing During Reading

Ralph Radach, Alan Kennedy, Keith Rayner, 2004 Measurement and analysis of eye movements are two of the most powerful ways to study the workings of the human mind This Special Issue on eye movements and information processing in reading presents an overview of experimental research based on this methodology Eye movements provide a unique opportunity to examine principles of human information processing in a well structured visual environment while people engage in a natural cognitive task At the same time oculomotor measures can be used as a tool to develop and test psycholinguistic hypotheses about the processing of written language The papers in this issue contribute to both aspects addressing issues that dominate current debates in the field Seen from the angle of visual information processing a major theme is the role played by parafoveal information for different types and levels of processing and for oculomotor control in reading This includes effects of visual and linguistic word properties on the selection of words for fixation and the specification of saccade amplitudes Clearly the most controversial question in this context concerns the allocation of attention with positions ranging from a sequentially moving spotlight to a gradient of spatially distributed processing Related to this is the issue of serial vs parallel word processing and the fundamental question as to what extent the duration of fixations in reading is related to lexical processing Taking a psycholinguistic perspective the topics addressed include several levels of language processing from orthography to pragmatic information in sentence reading New approaches to the study of morphologically complex words are reported together with novel work revealing the complex nature of the apparently accessible but elusive concept of word frequency Other papers reflect current theoretical discussions centered on the development of computational models of the reading process and contribute to the empirical base of these discussions Taken together this collection of papers supplemented by an introduction to the field and a commentary on major issues presents a comprehensive and up to date perspective on a research area currently characterised by numerous theoretical and empirical disputes The papers will be of particular appeal to readers interested in basic and applied psycholinguistics attention and visual perception motor control and the modelling of complex cognitive processes The Mind's Eye Ralph Radach, Jukka Hyona, Heiner Deubel, 2003-06-05

The book provides a comprehensive state of the art overview of current research on cognitive and applied aspects of eye movements The contents include peer reviewed chapters based on a selection of papers presented at the 11th European Conference on Eye Movements Turku Finland 2001 supplemented by invited contributions The ECEM conference series brings together researchers from various disciplines with an interest to use eye tracking to study perceptual and higher order cognitive functions The contents of the book faithfully reflect the scope and diversity of interest in eye tracking as a fruitful tool both in basic and applied research It consists of five sections visual information processing and saccadic eye movements empirical studies of reading and language production computational models of eye movements in reading eye tracking as a tool to study human computer interaction and eye movement applications in media and communication

research Each section is concluded by a commentary chapter by one of the leading authorities in the field These commentaries discuss and integrate the contributions in the section and provide an expert view on the most significant present and future developments in the respective areas The book is a reference volume including a large body of new empirical work but also principal theoretical viewpoints of leading research groups in the field *The Oxford Handbook of Eye Movements* Simon Livversedge,Iain Gilchrist,Stefan Everling,2011-08-18 In the past few years there has been an explosion of eye movement research in cognitive science and neuroscience This has been due to the availability of off the shelf eye trackers along with software to allow the easy acquisition and analysis of eye movement data Accompanying this has been a realisation that eye movement data can be informative about many different aspects of perceptual and cognitive processing Eye movements have been used to examine the visual and cognitive processes underpinning a much broader range of human activities including language production dialogue human computer interaction driving behaviour sporting performance and emotional states Finally in the past thirty years there have been real advances in our understanding of the neural processes that underpin eye movement behaviour The Oxford Handbook of Eye Movements provides the first comprehensive review of the entire field of eye movement research In over fifty chapters it reviews the developments that have so far taken place the areas actively being researched and looks at how the field is likely to develop in the coming years The first section considers historical and background material before moving onto section 2 on the neural basis of eye movements The third and fourth sections look at visual cognition and eye movements and eye movement pathology and development The final sections consider eye movements and reading and language processing and eye movements Bringing together cutting edge research from an international team of leading psychologists neuroscientists and vision researchers this book is the definitive reference work in this field *The Moving Tablet of the Eye* Nicholas J. Wade,2005 Tracing the history of eye movement research this work shows how great strides were made in this area before modern recording devices were available especially in the measurement of nystagmus **Eye Movement Research** Gerd Lüer,1988 **Current Oculomotor Research** Wolfgang Becker (Dr. -Ing.),Heiner Deubel,1999-01-31 Human behaviour and communication relies heavily on visual guidance and visually coded information and therefore is tightly coupled to eye movements Consequently many parts of our brains are involved in eye movement control and phenomena contingent on eye movement This volume covers the latest research from a large group of laboratories covering all aspects of oculomotor research from physiology engineering and medical sciences to experimental psychology and cognitive sciences *European Conference on Eye Movements (2nd : 1983 : Nottingham, England): Theoretical and Applied Aspects of Eye Movement Research : Selected/edited Proceedings of the Second European Conference on Eye Movements, Nottingham, England, 19-23 September, 1983 ,* **Eye Tracking the User Experience** Aga Bojko,2013-11-15 Eye tracking is a widely used research method but there are many questions and misconceptions about how to effectively apply it *Eye Tracking the User Experience*
