X-ray optics made by X-ray lithography: Process optimization and quality control Koch, Frieder Johannes, 2017-10-16 Grating based X ray phase contrast imaging sets out to overcome the limits of conventional X ray imaging in the detection of subtle density differences and opens a way to characterize a sample's microstructure without the need for ultrahigh spatial resolution. The technique relies on grating structures with micrometric periods and extreme aspect ratio. Their fabrication by X ray lithography with optimal structure quality is the topic of this work.
