

An aerial photograph of a flooded landscape, likely a coastal or riverine area. The water is a deep blue-grey color, covering most of the foreground and middle ground. Several buildings and structures are partially submerged, with only their roofs and upper floors visible. The background shows a hilly coastline under a clear sky. The overall tone is somber and environmental.

threatens the continued existence of all sentient beings who call the biosphere home This book also highlights the richness diversity and utility of the ecological theories developed by the French philosophers Michel Serres Edgar Morin Jacques Derrida Dominique Lestel and Michel Onfray in addition to how they engage with biosemiotic principles Taken together the book probes the scientific linguistic philosophical and ethical implications of biosemiotic theories in a post pandemic world from an environmental and medical perspective      Environmental Ethics Robin Attfield,2014-04-03 In this clear concise comprehensively revised and up to date introduction to environmental ethics Robin Attfield guides the student through the key issues and debates in this field in ways that will also be of interest to a wide range of scholars and researchers The book introduces environmental problems and environmental ethics and surveys theories of the sources of the problems Attfield also puts forward his own original contribution to the debates advocating biocentric consequentialism among theories of normative ethics and defending objectivism in meta ethics The possibilities of ethical consumerism and investment are discussed and the nature and basis of responsibilities for future generations in such areas as sustainable development are given detailed consideration Attfield adopts an inclusive cosmopolitan perspective in discussions of global ethics and citizenship and illustrates his argument with a discussion of global warming mitigation adaptation and global justice The revised edition features a new chapter on climate change new treatments of animal issues ecofeminism environmental aesthetics invasion biology and virtue ethics and new applications of the precautionary principle to fisheries genetic engineering and synthetic biology The glossary and bibliography have been updated to assist understanding of these themes The text uses a range of devices to aid understanding such as summaries of key issues and guides to further reading and relevant websites It has been written particularly with a view to the needs of students taking courses in environmental ethics and will be of interest to students and scholars of philosophy ethics geography religion and environmental studies      *Urban design: The ecological thinking - A compendium* Dimitra Babalis,2008      *I.S.C. contemporary language and communication research A particularly interesting facet of this volume is the proposal that the architecture of the human organism is transpersonally in constant relation with its immediate surroundings as well as with non local multilevel surroundings This connection is based not only on the cognitive connection of minds or neurocognitive contacts with the nervous and sensual systems of communicators but on the multidimensional relationship between the manifold communicative modalities living systems possess Human communication is embedded within a given local communicative situation as well within the global non local environment via the basic ontology of entanglement The human communicative process is always evolving as a result of the constant fluctuations of life processes Indeed the conclusions presented in this volume open up a new approach to present day linguistics that human language is an essential life process
