Econometric Business Cycle Research:

Econometric Business Cycle Research Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i.e. ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable

Econometric Business Cycle Research J. P. A. M. Jacobs, 1998

The Business Cycle: Theories and Evidence M.T. Belongia, Michelle R. Garfinkel, 2012-12-06 These proceedings from a conference held at the Federal Reserve Bank of St Louis on October 17 18 1991 attempted to layout what we currently know about aggregate economic fluctuations Identifying what we know inevitably reveals what we do not know about such fluctuations as well From the vantage point of where the conference's participants view our current understanding to be these proceedings can be seen as suggesting an agenda for further research The conference was divided into five sections It began with the formulation of an empirical definition of the business cycle and a recitation of the stylized facts that must be explained by any theory that purports to capture the business cycle's essence After outlining the historical development and key features of the current theories of business cycles the conference evaluated these theories on the basis of their ability to explain the facts Included in this evaluation was a discussion of whether and how the competing theories could be distinguished empirically The conference then examined the implications for policy of what is known and not known about business cycles A panel discussion closed the conference highlighting important unresolved theoretical and empirical issues that should be taken up in future business cycle research

What Is a Business Cycle Before gaining a genuine understanding of business cycles economists must agree and be clear about what they mean when they refer to the cycle

Advances in Business Cycle Research Pierre-Yves Henin, 2012-12-06 Models derived from the Real Business Cycle perspective have recently taken a major place in business cycle research The papers in this present volume bring three contributions to this research programme A critical evaluation of the canonical RBC models new elements of empirical relevance based on comparative calibration and testing and new specifications at the frontier of business cycle research coping with non walrasian features contracts and nominal rigidities unemployment and growth
