Employers' Economics versus Employees' Economy John F. M. McDermott, 2017-01-23 This book argues that economic activity in the public sphere now underwrites private corporations and rejects rigid adherence to traditional economic theories that no longer apply Adam Smith's widely used merchant's model assumes that most investment is private when in fact research demonstrates that public investment in the workforce through education and training far outweighs the private sector and does not account for the growing presence of consensual pricing the diversification of modern businesses or the increasing internal authoritarianism of globalizing companies With de facto public support for these adaptations undermining the universally presumed economic model private corporations are able to increase their profits while misrepresenting the investment of their own global labor forces This book suggests an economy of laws solution that balances the needed degree of central investment planning with the continuation of our pluralist economy of largely autonomous firms principally by extending the full rights of citizens into the workplace itself Economic Policies and Practices U.S. Congress. Joint Economic Committee, 1963 Indicators and Policies to Make Work Pay Giuseppe Carone, Aino Salomäki, 2005 The Commission's Directorate General for Economic and Financial Affairs hosted a workshop on making work pay policies and indicators in March 2005 a particularly opportune moment to discuss these issues since it coincided with the new start for the Lisbon strategy with its increased focus on growth and jobs The purpose of the workshop was to contribute to the debate on reforms of tax and benefit systems It took stock of the most recent studies by academic researchers in this area and brought some recently developed indicators on work incentives to the attention of the participants It also provided an opportunity for discussion between academic researchers and labour market experts in national administrations and EU institutions The papers presented in the workshop demonstrate that there are tangible benefits in bringing together academic researchers and national policy makers to exploit research findings compare experiences and exchange best practices to shape further reforms This volume brings those contributions together They shed light on highly topical issues such as indicators on incentives the role of incentives eligibility rules and enforcement the responsiveness of labour supply and the lessons that can be learnt from national labour market reforms Principles of Economics in Context Neva Goodwin, Jonathan M.
