Ecosystem Geography Robert G. Bailey, 2014-07-08 and management is presently undergoing enormous change away from managing single resources to managing ecosystems From forest to tundra to desert to steppe the world's ecosystems vary vastly To manage them effectively we need to understand their geographic distribution better We need to do this at various levels of detail because ecosystems exist at multiple scales in a hierarchy from regional to local Maps are needed to display ecosystem distribution and hierarchy Until now information on defining ecosystem boundaries has been scarce This book is the first to clarify and systematize the underlying principles for their mapping It presents a synthesis of the knowledge in this field and provides a guide to its use I recommend this book to all who are involved in the study and management of ecosystems Chief USDA Forest Service Jack Ward Thomas v Preface to the Second Edition his book outlines a system that organizes the Earth into a hierarchy of increasingly finer scale ecosystems that can serve as a consistent framework for ecological analysis and management The system consists of a three level hierarchy of nested ecosystem units and their associated mapping criteria Delineation of units involves identifying the environmental factors controlling the spatial geography of ecosystems at various levels and establishing boundaries where these factors change significantly Macroscale units ecoregions are climatically controlled and delineated as Köppen-Trewartha climate zones **Landscape-scale**

Conservation Planning Stephen C. Trombulak, Robert Baldwin, 2010-09-21 Hugh P Possingham Landscape scale conservation planning is coming of age In the last couple of decades conservation practitioners working at all levels of governance and all spatial scales have embraced the CARE principles of conservation planning Comprehensiveness Adequacy Representativeness and Efficiency Hundreds of papers have been written on this theme and several different kinds of software programs have been developed and used around the world making conservation planning based on these principles global in its reach and influence Does this mean that all the science of conservation planning is over that the discovery phase

has been replaced by an engineering phase as we move from defining the rules to implementing them in the landscape This book and the continuing growth in the literature suggest that the answer to this question is most definitely no All of applied conservation can be wrapped up into a single sentence what should be done the action in what place at what time using what mechanism and for what outcome the objective It all seems pretty simple what where when how and why However stating a problem does not mean it is easy to solve

Ecological Governance Olivia

Woolley,2014-11-06 Ecological degradation has been an object of concern for the international community since the early 1970s but legal approaches that have been employed to improve the protection of ecosystems have failed to halt this decline Ecological Governance explores how the law should respond to this rapid global deterioration of ecosystems by examining the foundational scientific and ethical considerations for designing laws that are effective for ecological protection Based on these analyses it argues that developed states should prioritise the reduction of the ecological stresses for which they are responsible in decision making on their future courses The author also proposes structures for governance and associated legal frameworks that would enable the formulation and implementation of policies for ecological sustainability

Chester,2012-02-13 Conservationists have long been aware that political boundaries rarely coincide with natural boundaries From the establishment of early peace parks to the designation of continental migratory pathways a wide range of transborder mechanisms to protect biodiversity have been established by conservationists in both the public and private sectors Conservation Across Borders presents a broad overview of the history of transboundary conservation efforts and an accessible introduction to current issues surrounding the subject Through detailed examinations of two initiatives the International Sonoran Desert Alliance ISDA and the Yellowstone to Yukon Initiative Y2Y the book helps readers understand the benefits and challenges of landscape scale protection In addition to discussing general concepts and the specific experience of ISDA and Y2Y the author considers the emerging concept of conservation effectiveness and offers a comparative analysis of the two projects The book ends with a discussion of the complex relationships among civil society governments and international borders By considering the history goals successes and failures of two divergent initiatives the book offers important insights into the field of transborder conservation along with valuable lessons for those studying or working in the field

Barlett,2005-08-26 Amidst city concrete and suburban sprawl Americans are discovering new ways to reconnect with the natural world From community gardens in New York s Lower East Side to homeless shelters in California the search for a more sustainable future has led grassroots groups to a profound reconnection to place and to the natural world Studies of the health consequences of renewing a connection with nature support the urgency of providing green surroundings as cities expand and the majority of the earth s population lives in urban areas Medical research results from groups as diverse as healthy volunteers surgery patients and heart attack survivors suggest that contact with nature may improve health and well being Engagement with nearby natural places also provides restoration from mental fatigue and support for more resilient and cooperative behavior Aspects of stronger community life are fostered by access to nature suggesting that there are significant social as well as physical and psychological benefits from connection with the natural world This volume brings together research from anthropology sociology public health psychology and landscape architecture to highlight how awareness of locale and a meaningful renewal of attachment with the earth are connected to delight in learning about nature as well as to civic action and new forms of community Community garden coalitions organic market advocates and greenspace preservationists resist the power of global forces enacting visions of a different future Their creative efforts tell a story of a constructive and dynamic middle ground between private plots and public action between human health and ecosystem health between individual attachment and urban sustainability *Natural Areas Journal* ,2007
