Morita, 1974      *Native Aquatic Bacteria: Enumeration Activity, and Ecology* J. W. Costerton, 1979      *Environmental and Microbial Relationships* Christian P. Kubicek, Irina S. Druzhinina, 2007-09-10 This volume provides insight into current research on fungal populations and communities It focuses on fungal responses to the physical environment interactions with other fungi microorganisms and invertebrates the role of fungi in ecosystem processes such as decomposition and nutrient cycling and aspects of biogeography and conservation The second edition has been completely updated and revised to accommodate the introduction of molecular methods and the flood of new findings since then      *Microbial Enzymes in Aquatic Environments* Ryszard J. Chrost, 2012-12-06 Organic matter in aquatic environments consists mostly of large compounds which cannot be taken up and utilized directly by microbial cells Prior to incorporation polymeric materials undergo degradation by cell bound and extracellular enzymes produced by these microbes in fact such enzymatic mobilization and transformation is the key process which regulates the turnover of organic as well as inorganic compounds in aquatic environments This volume brings together studies on enzymatic degradation processes from disciplines as diverse as water and sediment research bacterial and algal aquatic ecophysiology eutrophication and nutrient cycling and biogeochemistry in both freshwater and marine ecosystems Its scope extends from fundamental research exploring the contribution of microbial enzymatic processes to whole ecosystem functioning to practical applications in water biotechnology The first comprehensive publication providing an overview of this emerging field of enzymology *Microbial Enzymes in Aquatic Environments* will be of great interest to ecologists and microbiologists alike      **Effect of the ocean environment on microbial activities; Proceedings of the 2. Rowe, 1983-01-04      **Microbial Ecology of a Brackish Water Environment** G. Rheinheimer, 2012-12-06 A knowledge which is as accurate as possible of microbial ecology is indispensable for ecosystem research and environmental protection This is particularly true for coastal waters whereby brackish water areas occupy a special position After several years of preliminary studies on the composition and distribution of the micro flora algae fungi and bacteria a comprehensive investigation on the primary production bacterial development and microbial uptake and decomposition of substances in the Kiel Bight was carried out during which ten scientists from the Institut für Meereskunde of Kiel University participated Here for the first time numerous hydrographical chemical and microbiological parameters could be measured on the same water

samples The aim of this joint project was to gain an insight into the manifold functions of the microorganisms in the uptake and degradation of organic substances and in the connections between pollution production and remineralization The results of the investigations led not only to new knowledge of the role of the microorganisms in the brackish water ecosystem but also to a revision of earlier conceptions especially on the influence of wastes on the micro flora and its role in the self purification of coastal waters Such a time limited investigation however cannot clarify all the questions on the complex relationships between the microorganisms and their biotope Therefore the present volume should also be understood as a stimulus for new and further reaching research on the microbial ecology of coastal waters Thereby the most important methods are described as well as the practical experience obtained *Handbook of Methods in Aquatic Microbial Ecology* Paul F. Kemp, Jonathan J. Cole, Barry F. Sherr, Evelyn B. Sherr, 2018-05-02 *Handbook of Methods in Aquatic Microbial Ecology* is the first comprehensive compilation of 85 fundamental methods in modern aquatic microbial ecology Each method is presented in a detailed step by step format that allows readers to adopt new methods with little difficulty The methods represent the state of the art and many have become standard procedures in microbial research and environmental assessment The book also presents practical advice on how to apply the methods It will be an indispensable reference for marine and freshwater research laboratories environmental assessment laboratories and industrial research labs concerned with microbial measurements in water *Functional Adaptations of Marine Organisms* F. John Vernberg, Winona B. Vernberg, 2013-09-24 *Functional Adaptations of Marine Organisms* gives an insight into the functional adaptations of marine organisms to natural and man made sets of environmental factors The book presents discussions on marine habitats physiology of marine primary producers and decomposers and functional adaptations of animals in relation to each major ecological divisions of the sea The book will be of value to marine biologists biologists botanists and students **Oceanography and Marine Biology** Harold Barnes, 2003-09-02 This book provides a review covering the basics of marine research special topics and emerging areas in the fields of oceanography and marine biology *Oceanography and Marine Biology, Volume 20* Harold Barnes, 1982-12-31 This book provides a review covering the basics of marine research special topics and emerging areas in fields of oceanography and marine biology It is intended for researchers and students in all fields of marine science Marine Microbiology B. Austin, 1988-07-29 The emphasis is on new and exciting facets of the subject notably biotechnology fish and shellfish pathology and deep sea microbiology The volume also provides a sound introduction to the main elements of marine microbiology including the habitats and ecology of marine micro organisms their taxonomy and a practical guide to microbiological techniques and methods *Heterotrophic Activity in the Sea* Peter J. LeB. Williams, John E. Hobbie, 2012-12-06 Introduction This book contains papers given at a NATO Advanced Research Institute A R I held at Caiscais Portugal in November 1981 The subject of the A R I was marine heterotrophy this is defined as the process by which the carbon autotrophically fixed into organic compounds by photosynthesis is transformed and respired Obviously all animals

and many microbes are heterotrophs but here we will deal only with the microbes Also we restricted the A R I primarily to microbial heterotrophy in the water column even though we recognize that a great deal occurs in sediments Most of the recent advances have in fact been made in the water column because it is easier to work in a fluid apparently uniform medium The reason for the A R I was the rapid development of this subject over the past few years Methods and arguments have flourished so it is now time for a review and for a sorting out We wish to thank the NATO Marine Science Committee for sharing this view F Azam A L Meyer Reil L Pomeroy C Lee and B Hargrave for organizational help and H Lang and S Semino for valuable editing aid
