Effects of Climate Change on Crop Yields and Nutrition in Zambia Michael Mulenga, 2022-04-13 Master's Thesis from the year 2021 in the subject Geography Earth Science Meteorology Aeronomy Climatology grade A language English abstract Climate change has adversely affected many communities and countries around the world however poor people in less developed countries are the most affected The research investigated the negative impacts of climate change on rural communities in the Vubwi District in the eastern province of Zambia using observation trend analysis Pearson Regression and Multiple Regression Simple and Purposive sampling was employed to collect samples from the population of 6096 rural households The finding of the analysis was that 78% of the respondents were adversely affected by the impacts of climate change while 22 were not badly affected The local people lacked access to early warning and facilities such as dams for harvesting rain water for irrigation in times of drought and animal drinking It was recommended that early maturity seed varieties be introduced to the rural poor people and scaling up means to livelihood diversity such as chicken rearing and adopting drought resistant crops such as cassava

*Animal products from the Mediterranean area* J.M.C. Ramalho Ribeiro,A.E.M. Horta,C. Mosconi,A. Rosati,2023-08-28 This book and its case studies focuses on typical local products and breeds descriptions of the production systems and conservation techniques of endangered breeds products in the Mediterranean area Traditional and extensive systems involving local breeds which meet the needs of the population requiring safe foods at a reasonable costs are validated for their specific meaning to the region It is acknowledged that natural constraints of the Mediterranean area of climate and geography make it unfavourable to mass production at low cost Profit related aspects are discussed considering the different economic realities of the northern part of the basin compared to the southern part Characteristics of typical animal production with consideration for positive and negative impacts on production systems and on the environment as

well as the need to adjust to climate uncertainty and seasonal variability of feed resources is also discussed. A focus is given to the following areas: animal production economy and social impact in the Mediterranean area; utilisation of natural resources and environmental impact of the animal production systems; possibilities for improving traditional systems; quality and traceability of typical products moving from traditional to certified animal products. Adaptation of Plants to Waterlogging and Hypoxia Najeeb Ullah, Silvia Pampana, Waqar Ahmad, Daniel Kean Yuen Tan, 2024-06-03. Plants like other living organisms require oxygen and water supplies for sustaining their normal growth and development. The water requirement is generally met through a coordinated system of root to shoot communication. However, excessive soil moisture in the rhizosphere can impact normal functioning of plants by restricting oxygen supplies to the roots. To survive under hypoxic conditions, plants show cellular, molecular, and functional level adaptations. One temporary response could be switching to anaerobic respiration and maintain energy production to some extent via glycolysis and ethanol fermentation. However, root respiration, water and nutrient uptake, and hormonal synthesis are severely impacted under sustained periods of oxygen deficiency. These belowground changes in turn affect shoot performance and yield formation by interfering with the key physiological processes. **Technological Approaches for Climate Smart Agriculture** Pavan

**Global Climate Change: Resilient and Smart Agriculture** V. Venkatramanan, Shachi Shah, Ram Prasad, 2020-09-18. This book provides essential insights into methods and practices of Climate smart Agriculture which is driven by the principles of climate resilience and smart resource use in agricultural production. Climate smart agriculture is a key policy instrument for achieving poverty eradication and a hunger free world as well as mitigating the effects of climate change. This book discusses in detail climate smart agricultural technologies and practices that can reduce the vulnerability of agricultural systems, improve the livelihoods of farmers and other stakeholders, and reduce the greenhouse gas emissions from crop production and livestock husbandry. The agriculture, forestry, and other land use (AFOLU) sector produces roughly 10-12 gigatons of CO<sub>2</sub> equivalent per year; therefore, sustainable practices for agriculture and related land use hold immense potential to mitigate climate change. The potential impacts of climate variability and climate change on agriculture are extensively documented and articulated, especially with regard to global and national environmental agendas that call for innovation, transformation, and climate resilient advances in agriculture. As the book demonstrates, climate smart agriculture

offers an excellent tool for boosting agricultural output to feed the growing global population for reducing greenhouse gases emissions from agriculture and other land use and for protecting agricultural production systems from the impending dangers of climate change      Plant Genetic Resources and Climate Change Michael Jackson,Brian Ford-Lloyd,Martin Parry,2013-12-13 This book will address the current state of climate change predictions and how climate change will affect conservation and use of crop germplasm both ex situ and in situ In addition specific examples of germplasm research related to climate change threats will be highlighted Such activities need to take place under a regime of access to and use of germplasm through international conventions and treaties      **Managing Weather and Climate Risks in Agriculture** Mannava VK Sivakumar,Raymond P. Motha,2008-01-10 In many parts of the world weather and climate are one of the biggest production risks and uncertainty factors impacting on agricultural systems performance and management Both structural and non structural measures can be used to reduce the impacts of the variability including extremes of climate resources on crop production While the structural measures include strategies such as irrigation water harvesting windbreaks etc the non structural measures include use of seasonal to interannual climate forecasts improved application of medium range weather forecasts and crop insurance This book based on an International Workshop held in New Delhi India should be of interest to all organizations and agencies interested in improved risk management in agriculture      Climate Change Impacts on Agriculture and Food Security in Egypt El-Sayed Ewis Omran,Abdelazim M. Negm,2020-04-08 This book gathers contributions discussing climate change in Egypt from an agricultural perspective Written by leading experts it presents state of the art insights and the latest research developments in light of the most recent IPCC report Focusing on identifying the specific phenomena that affect climate change in Egypt the book also addresses the effects of climate change in Egypt particularly examining the quality and quantity of water resources as well as the socio economic impacts of climate change on agricultural activities Furthermore it explores alternative solutions to support agriculture and food security and raises awareness of adaptation and protection as the key to adapting to the risks posed by climate change Covering the four fundamental pillars of climate change food security availability access and stability this book is a valuable resource for stakeholders involved in achieving the 2030 sustainable development goals in Egypt and all countries with similar climatic conditions It is also a unique source of information and updates on climate change impacts for graduates researchers policy planners and decision makers      *Distributional Impacts of Climate Change and Disasters* Matthias Ruth,Northeastern University, US and ,2009-01-01 Climate change tends to increase the frequency and intensity of weather related disasters which puts many people at risk Economic social and environmental impacts further increase vulnerability to disasters and tend to set back development destroy livelihoods and increase disparity nationally and worldwide This book addresses the differential vulnerability of people and places introducing concepts and methods for analysis and illustrating the impact on local regional national and global scales The chapters in the first section set the stage by focusing on the relationship

between climate change and disasters and by broadly exploring their economic and social aftermaths Further chapters explore particular impacts of climate change including the social political and even military conflicts that may arise over scarce natural resources as well as the effects on biodiversity and thus the natural environment Chapters in the last section discuss responses to climate change in terms of information sharing and preparedness adaptation and mitigation particularly the relevance of improving the role of markets through investment and insurance to face these challenges Researchers and policymakers involved in the study of climate change and disaster prevention will find this comprehensive volume of great interest

**The Economic Impact of Climate Change on Agriculture in Cameroon** Ernest L. Molua, Cornelius M. Lambi, 2012 This study examines the impact of climate change on crop farming in Cameroon The country's economy is predominantly agrarian and agriculture and the exploitation of natural resources remain the driving force for the country's economic development Fluctuations in national income are due not merely to the decline in world demand for Cameroon's traditional agricultural exports or to mistakes in economic policy making but also to the vagaries of the weather Based on a farm level survey of more than 800 farms the study employs a Ricardian cross sectional approach to measure the relationship between climate and the net revenue from crops Net revenue is regressed on climate water flow soil and economic variables Further uniform scenarios assume that only one aspect of climate changes and the change is uniform across the whole country The analysis finds that net revenues fall as precipitation decreases or temperatures increase across all the surveyed farms The study reaffirms that agriculture in Cameroon is often limited by seasonality and the availability of moisture Although other physical factors such as soil and relief have an important influence on agriculture climate remains the dominant influence on the variety of crops cultivated and the types of agriculture practiced
