Adaptive Mesh Refinement

- *Start with a base coarse grid with minimum acceptable resolution*
- *Tag regions in the domain requiring additional resolution, cluster the tagged cells, and fit finer grids over these clusters*
- *Proceed recursively so that regions on the finer grid requiring more resolution are similarly tagged and even finer grids are overlaid on these regions*
- *Resulting grid structure is a dynamic adaptive grid hierarchy*

Parallel Computing Roman Trobec, Marián Vajteršic, Peter Zinterhof, 2009-06-18 The use of parallel programming and architectures is essential for simulating and solving problems in modern computational practice There has been rapid progress in microprocessor architecture

interconnection technology and software development which are influencing directly the rapid growth of parallel and distributed computing. However, in order to make these benefits usable in practice, this development must be accompanied by progress in the design, analysis, and application aspects of parallel algorithms. In particular, new approaches from parallel numerics are important for solving complex computational problems on parallel and/or distributed systems. The contributions to this book are focused on topics most concerned in the trends of today's parallel computing. These range from parallel algorithmics, programming tools, network computing to future parallel computing. Particular attention is paid to parallel numerics, linear algebra, differential equations, numerical integration, number theory, and their applications in computer simulations, which together form the kernel of the monograph. We expect that the book will be of interest to scientists working on parallel computing, doctoral students, teachers, engineers, and mathematicians dealing with numerical applications and computer simulations of natural phenomena.

Euro-Par 2004 Parallel Processing Euro-Par is an annual series of international conferences dedicated to the promotion and advancement of all aspects of parallel computing. The major themes can be divided into the broad categories of hardware, software, algorithms, and applications for parallel computing. The objective of Euro-Par is to provide a forum within which to promote the development of parallel computing both as an industrial technique and an academic discipline, extending the frontier of both the state of the art and the state of the practice. This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take-up. The main audience for and participants at Euro-Par are seen as researchers in academic departments, government laboratories, and industrial organizations. Euro-Par's objective is to be the primary choice of such professionals for the presentation of new results in their specific areas. Euro-Par also targets applications demonstrating the effectiveness of parallelism. This year's Euro-Par conference was the tenth in the conference series. The previous Euro-Par conferences took place in Stockholm, Lyon, Passau, Southampton, Toulouse, Munich, Manchester, Paderborn, and Klagenfurt. Next year, the conference will take place in Lisbon. Euro-Par has a permanent Web site hosting the aims, the organization structure, details, as well as all the conference history. <http://www.europar.org>
