Traditional econometric methodology proceeds along the following lines:

1. Statement of theory or hypothesis.
2. Specification of the mathematical model of the theory (Economic Model)
3. Collecting the data
4. Specification of the statistical, or econometric model
5. Estimation of the parameters of the econometric model
6. Hypothesis testing
7. Using the model for control or policy purposes.

**Econometric Analysis** William H. Greene, 2003 For a one year graduate course in Econometrics This text has two objectives The first is to introduce students to applied econometrics including basic techniques in regression analysis and some of the rich variety of models that are used when the linear model proves inadequate or inappropriate The second is to present students with sufficient theoretical background that they will recognize new variants of the models learned about here as merely natural extensions that fit within a common body of principles The Fifth Edition features a complete update of techniques and developments a reorganization of material for improved presentation and new material and applications
