Test Economics and Design for Testability for Electronic Circuits and Systems Chryssa Dislis,1995 Providing an examination of the economics of design and test of electronics circuits and systems this book describes the overall economic effects of design and test decisions facing electronic designers engineering managers and test engineers at device board system and field test stages and includes issues such as time to market and product liability It also discusses the issues and parameters that can cause variations in test related costs and covers cost model creation and the use usability of cost models for making design and test decisions

Economics of Design and Test for Electronic Circuits and Systems M. Abadir,1992

Economics of Electronic Design, Manufacture and Test M. Abadir,T. Ambler,2013-06-29 The general understanding of design is that it should lead to a manufacturable product Neither the design nor the process of manufacturing is perfect As a result the product will be faulty will require testing and fixing Where does economics enter this scenario Consider the cost of testing and fixing the product If a manufactured product is grossly faulty or too many of the products are faulty the cost of testing and fixing will be high Suppose we do not like that We then ask what is the cause of the faulty product There must be something wrong in the manufacturing process We trace this cause and fix it Suppose we fix all possible causes and have no defective products We would have eliminated the need for testing Unfortunately things are not so perfect There is a cost involved with finding and eliminating the causes of faults We thus have two costs the cost of testing and fixing we will call it cost 1 and the cost of finding and eliminating causes of faults call it cost 2 Both costs in some way are included in the overall cost of the product If we try to eliminate cost 1 cost 2 goes up and vice versa An economic system of production will minimize the overall cost of the product Economics of Electronic Design Manufacture and Test is a collection of research contributions derived from the Second Workshop on Economics of Design Manufacture and Test written for inclusion in this book
