ABSTRACT

The development of technology has given rise to various social media platforms, such as Instagram. Instagram offers numerous features to its users for content creation, such as Instagram stories, feeds, Instagram reels, and live Instagram. The use of social media is closely related to digital literacy skills. Social media has a significant impact on society, including changes in parenting patterns, known as "sharenting." Sharenting refers to the activity of parents sharing photos or videos of their children's growth and development on social media, which often makes it difficult to restrict their lives on social media and their children's privacy. This study aims to investigate the influence of parents' digital literacy on their sharing behavior and their children's privacy. The research utilizes a quantitative method by conducting a survey with 400 respondents. The findings of the study reveal that digital literacy has a significant influence on sharenting, with a coefficient of 0.799, a t-statistic of 16.785, and a p-value of 0.000. This indicates that digital literacy has a proven positive and significant impact on sharenting. Furthermore, digital literacy also has a positive and significant influence on children's privacy, as the coefficient of digital literacy's influence on children's privacy is 0.774, with a t-statistic of 16.059 and a p-value of 0.000.

The Effects of Child Abuse and Neglect Raymond Starr, David A. Wolfe, 1991-08-09 Research in child abuse has expanded dramatically since the first controlled studies were started in the mid 1970s The fields of developmental psychology and clinical child psychology have progressed in tandem resulting in theoretical richness and increased methodological sophistication With these advances it is now commonly recognized that child abuse and neglect can be fully understood only through the use of longitudinal research methods difficult expensive and time consuming though their application may be

THE EFFECTS OF CHILD ABUSE AND NEGLECT reviews the findings from current longitudinal research and also serves as an authoritative guide to the complex methodologic issues involved in conducting such studies The book s introductory chapter examines the intergenerational transmission of abusive behavior and its adult sequelae In depth analyses of three innovative longitudinal investigations follow the first focuses on the value of an at risk approach to research in this area the second evaluates structural equations modeling a relatively new statistical method and the third demonstrates the usefulness of a transactional approach to the longitudinal study of different forms of maltreatment Other contributions focus specifically on the interpretation of existing research and on conducting future studies Provocative discussions on crucial definitional issues are complemented by equally trenchant analyses of as yet unresolved design considerations The remaining chapters deal with basic measurement issues especially the assessment of parental personality and psychopathology psychological abuse parental childrearing belief systems parent child attachment and other domains of parent child interaction and the impact of maltreatment on physical and emotional development An effective synthesis of practical and research issues

When Your Children Marry Deborah M. Merrill, 2011-05-05

Marriage is an important transition in the life of any adult who marries. But often when a son or daughter gets married their relationships with their natal families change. It is often said that a daughter is a daughter all of her life but a son is a son till he takes him a wife. This book examines how marriage changes relationships between adult children and their parents and how this differs for sons versus daughters. Merrill considers the process by which men get pulled into their wives' families and the ways in which men are sometimes more connected to their wives' families following marriage than to their own families. But what is it about a relationship with a son that changes when he marries? And why do daughters tend to stay closer? Why do mothers experience greater difficulty in negotiating relationships with married sons than with married daughters? Why do daughters tend to stay closer and maintain stronger ties to their natal families than sons do? This book answers these questions and offers advice for mothers on how to maintain strong ties with their children when they marry, negotiate relationships that may be fraught with new challenges and accept changes when they happen. Sharing firsthand accounts from mothers, sons and daughters, the author sheds new light on this neglected topic.

[Young Children, Parents and Professionals](#) Margaret Henry, 2012-10-12

As early year education and very early child care increase, parents and professionals face many difficult questions. What are the effects of early education on children? Are parents fulfilling their roles? What should teachers' roles be? Seldom asked are more basic questions: What are the fundamental needs of young children? Or parents? Or professionals? How can these differing sets of needs be met? Margaret Henry proposes three dimensions of caregiving behaviour through which parents and professionals not only help young children to develop but can also help one another's development. Evidence of positive change comes both from her own research in family day care and from the work of her students, practicing teachers and child care personnel. Their examples involve often hard to reach parents: those who are tired, employed, alienated, bossy and culturally and ethnically diverse. There are practical suggestions here for professionals and parents interested in enhancing their relationships with one another and the outcomes for young children.

[Executive Function and Education](#) Mariëtte Huizinga, Dieter Baeyens, Jacob A. Burack, 2018-09-21

Executive function is an umbrella term for various cognitive processes that are central to goal directed behavior, thoughts and emotions. These processes are especially important in novel or demanding situations which require a rapid and flexible adjustment of behavior to the changing demands of the environment. The development of executive function relies on the maturation of associated brain regions as well as on stimulation in the child's social contexts, especially the home and school. Over the past decade, the term executive function has become a buzzword in the field of education as both researchers and educators underscore the importance of skills like goal setting, planning and organizing in academic success. Accordingly, in initiating this Research Topic and eBook, our goal was to provide a forum for state of the art theoretical and empirical work on this that both facilitates communication among researchers from diverse fields and provides a

theoretically sound source of information for educators The contributors to this volume who hail from several different countries in Europe and North America have certainly accomplished this goal in their nuanced and cutting edge depictions of the complex links among various executive function components and educational success
