Nelson, 1991 This book is intended to be both a reference work for the active investigator and an overview for the professional who is not actively engaged in laboratory or clinical studies It attempts to bring the entire field of dietary fats and health into perspective *Canadian Journal of Physiology and Pharmacology*, 1997 **Handbook of Lipids in Human Nutrition** Gene A. Spiller, 1995-12-05 The Handbook of Lipids in Human Nutrition is a concise reference for professionals and students interested in the role of lipids in nutrition Over 100 tables and illustrations provide quick access to the most current data available *Lipids in Health and Disease* Peter Quinn, Xiaoyuan Wang, 2008-08-27 Lipids are functionally versatile molecules They have evolved from relatively simple hydrocarbons that serve as depot storages of metabolites and barriers to the permeation of solutes into complex compounds that perform a variety of signalling functions in higher organisms This volume is devoted to the polar lipids and their constituents We have omitted the neutral lipids like

fats and oils because their function is generally to act as deposits of metabolizable substrates. The sterols are also outside the scope of the present volume and the reader is referred to volume 28 of this series which is the subject of cholesterol. The polar lipids are comprised of fatty acids attached to either glycerol or sphingosine. The fatty acids themselves constitute an important reservoir of substrates for conversion into families of signalling and modulating molecules including the eicosanoids amongst which are the prostaglandins, thromboxanes and leucotrienes. The way fatty acid metabolism is regulated in the liver and how fatty acids are desaturated are subjects considered in the first part of this volume. This section also deals with the modulation of protein function and inflammation by unsaturated fatty acids and their derivatives. New insights into the role of fatty acid synthesis and eicosenoid function in tumour progression and metastasis are presented.

**Fatty Acids in Foods and Their Health Implications** Ching Kuang Chow, 1992. Discusses the chemistry and composition of fatty acids in foods and their biological and health effects. Includes such topics as fatty acid classification and nomenclature, chemical and physical properties of fatty acids, genetic alteration of food fats and oils, effects of processing and storage on fatty acids in edible oils, commercial applications of fatty acid derivatives, fatty acids and membrane function, biological effects of palm oil in humans, fatty acids and cardiovascular diseases, cancer, renal disease etc. **World Review of Nutrition and Dietetics** Berthold Koletzko, Artemis P. Simopoulos, Geoffrey Howard Bourne, 2011. Nutraceutical and Specialty Lipids and their Co-Products Fereidoon Shahidi, 2006-03-14. While certain saturated and trans fats continue to face scrutiny as health hazards, new evidence indicates that in addition to supplying foods with flavor and texture, fats also provide us with dietary components that are absolutely critical to our well-being. The importance of essential fatty acids and fat-soluble vitamins and other minor **Nutritional and Integrative Strategies in Cardiovascular Medicine** Stephen T. Sinatra, Mark C. Houston, 2022-04-19. Despite decades of aggressive pharmaceutical and surgical interventions, coronary artery disease (CAD) remains the number one killer of both men and women in the Western world. The most important aspect in the treatment of CAD is to focus on prevention. Indeed, prevention is easier than cure and when CAD does present itself, a combination of conventional and alternative methodologies can truly make a difference in people's lives. Building upon its predecessor, *Nutritional and Integrative Strategies in Cardiovascular Medicine*, Second Edition provides scientific and clinical insight from leaders in the field of cardiovascular medicine who explore an integrative approach to treating and curing cardiovascular diseases through conventional and non-allopathic methodologies. Nutritional interventions with both appropriate non-inflammatory diets and targeted nutraceutical supports are simple and basic strategies to prevent as well as help manage CAD and congestive heart failure (CHF). In fact, nutritional strategies in the treatment of CHF have not only afforded patients a better quality of life but increased survival as well. This evidence-based book describes how to integrate nutrition, supplements, lifestyle changes, and medications for improved outcomes in hypertension, dyslipidemia, diabetes, coronary heart disease, congestive heart failure, infectious myocarditis, and much more. Topics include Covid-19. An evidence

based integrative approach to supporting the myocardium Metabolic cardiology An exciting new way to manage heart failure Contains information on hypertension and dyslipidemia Naturopathic approaches Mediterranean diet as the longevity diet of the world Value of omega 3s and other fats Role of botanicals in the treatment of cardiovascular disease Integrative care of the patient in extending quality of life Gender specific medicine Perhaps a new evolving cardiovascular sub specialty Role of dental disease inflammation and cardiovascular disease Environmental toxins and the heart Earthing and grounding as an energetic nutrition in healing the heart Autophagy and mTOR the new medicine of the future Nutritional medicine is vitally important in the integrative care of the patient This book will assist established health professionals as well as students preparing for advanced degrees in healthcare and offer cutting edge and new information in cardiovascular medicine It offers simple nutritional supports that can make the difference between not only easing human suffering but also life and death

### **Studies on Biomarkers and New Targets in Aging Research in Iran** Paul C.

Guest,2021-07-31 The Middle East is known as the cradle of civilization It was the crossroads of ancient empires and the birthplace of major world religions Today it is the center of many world issues due to its economic religious and political importance Although it has lagged behind many other regions of the world in medicinal research this has increased dramatically in recent years with increasing numbers of relevant publications and the country of Iran has spearheaded this progress Much of the research has focused on increasing our understanding of the aging process and attempting to identify biomarkers and natural products to improve the human healthspan This book provides a comprehensive overview of the research conducted in the Middle East on the health benefits of curcumin a phytochemical derived from the famous spice turmeric Hundreds of studies have now been published describing the health benefits of this spice The importance of this research is exemplified by poor data regarding health and longevity as only 0.08% of the population in Iran consists of individuals over 90 years of age This is approximately 10 times lower than the percentage of this same age group in the United Kingdom and the United States of America and almost 20 times lower than that in Japan This book presents a series of reviews and meta studies describing research which has resulted in identification potential new biomarkers and drug targets for age related disorders All of the studies have focussed on the testing of curcumin and related products which have already shown some promising leads in age related conditions such as heart disease diabetes cognitive impairment and cancer The authors in this series come from different centers and cities of Iran including Mashhad Tehran Isfahan Ahvaz Birjand Quchan and Yazd and many of the chapters feature collaborations with other countries of the Middle East and throughout the world including Brazil Italy Mexico Oman Poland Switzerland the United Kingdom and the United States of America This underscores the emergence of the Middle East into this arena of research The book will be of high interest to scientific and clinical researchers in the subject of aging and age related disease and to physicians and pharmaceutical company scientists since it gives insights into the latest strategies biomarkers and targets involved in the mechanism of action of curcumin to promote healthy aging It will also provide important information on disease mechanisms related to age related disorders as each chapter will be presented in the context of specific chronic diseases
