Immunopharmacology of the Gastrointestinal System John L. Wallace, 1993-03-01 Diseases of the digestive system have a higher morbidity rate than any other group of disorder There is a growing body of evidence that the immune system participates in the pathogenesis of a wide range of these diseases including peptic ulcer disease and the gastropathy induced by nonsteroidal anti inflammatory drugs NSAIDS For these reasons efforts to develop novel therapies for digestive diseases are increasingly focused on the immune system This volume reviews the immunopharmacology of the gastrointestinal tract at four distinct levels Immunomodulation at a cellular level Cellular targets for immunomodulating drugs Specific classes of inflammatory mediators Utility and mechanisms of action of glucocorticoids in the treatment of diseases of the gastrointestinal tract

Innervation of the Gut Yvette Tache, David L. Wingate, Thomas F. Burks, 1993-12-02 Innervation of the Gut provides a stimulating discussion of gut innervations based on exciting developments generated by advanced neuroanatomical and electrophysiological approaches All components of the nervous system are covered including central spinal autonomic and enteric systems This information is relative to secretory motor and immune regulatory functions of the

gut as well as visceral sensation Brain transmitters involved in mediating stress induced alterations of gastrointestinal motor function and the central regulation of vagal outflow to the gut are discussed in detail The book will stimulate basic scientists and gastroenterologists to expand research efforts that may enable them to unravel the mechanisms of brain gut interactions under physiological and pathological conditions Students psychologists and psychiatrists will find **Innervation of the Gut** an essential reference for their studies **Innervation of the Gastrointestinal Tract** Simon Brookes,Marcello

Costa,2002-06-27 The long tube that makes up the gastrointestinal tract is composed of a variety of tissue types and is the largest internal organ of the body Its main function is to digest food and absorb the released nutrients Furthermore it is subdivided into functionally distinct regions that each mediate one of a variety of actions upon the food consumed i Cell

Injury and Protection in the Gastrointestinal Tract Gyula Mózsik,L. Nagy,K. D. Rainsford,A. Pár,2012-12-06 The scientific main programmes of these series of symposia changed from time to time following the international scientific trends The main programmes of the First Symposium were 1 Gastric and intestinal cytoprotection 2 Hepatoprotection 3 Pancreatic protection For the second one 1 Gastrointestinal mucosal cytoprotection 2 Liver cytoprotection 3 Pancreatic cytoprotection 4 Free radicals and scavengers 5 Computer approach to cytoprotection For the third one 1 Basic central peripheral and cellular mechanisms of gastrointestinal cytoprotection 2 Esophageal protection 3 Gastric protection 4 Small intestinal injury and protection 5 Large bowel injury and protection 6 Liver injury and protection 7 Pancreas injury and protection The main scientific programmes of the Fourth International Symposium on Cell Injury and Protection in the Gastrointestinal Tract are 1 General mechanisms of gastrointestinal injury and protection 2 Cell injury and protection in the stomach 3 Cell injury and protection in the small intestine and in the large bowel 4 Cell injury and protection in the liver and pancreas 5 Cell injury and protection of the premalignant status and malignant diseases in the gastrointestinal tract The presented papers are published in this book The abstracts of this meeting were published in Digestive Diseases and Sciences and we record appreciation of the Editor of that journal for their publication Some of the papers published here have appeared in Inflammopharmacology 1996 4 331 398 **Immunopharmacology of the Gut** W. Wershil,2013-10-22 Bristol Myers Squibb Mead Johnson Nutrition Symposia Volume 11 Immunopharmacology of the Gut represents a comprehensive and systematic coverage of the immunopharmacology of the gut compiling research that integrates the mucosal immune system and intestinal physiology This book discusses the immunological regulation of epithelial function fibroblastic sheath pathways of arachidonic acid metabolism and gastric response to mucosal anaphylaxis The implications for inflammatory diarrhea role of breast milk in neonatal host defense and milk borne peptide growth factors in human and bovine milk are also elaborated This publication likewise covers the immunopathologic features of celiac disease immune responses in protein energy malnutrition and bacterial translocation This volume is suitable for experts and clinicians from the disciplines of mucosal immunology intestinal physiology and enteric neurophysiology **Gastrointestinal and Hepatic**

Immunology Richard Heatley, 1994-10-27 This 1994 volume summarizes basic scientific advances in the area of the gut immune system and the immune abnormalities relevant to gastrointestinal and liver disease Physiology of the Gastrointestinal Tract Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10 FROM THE PREFACE The original purpose of the First Edition of Physiology of the Gastrointestinal Tract to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation signaling networks in development apoptosis and mechanisms in malignancies Most of the chapters in this section were edited by Juanita L Merchant Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology neural regulation stress and the regulation of food intake Almost all of the chapters were recruited and edited by Jackie D Wood The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E Barrett The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion The last section on Digestion and Absorption contains new chapters on the intestinal barrier protein sorting and ion channels along with those focusing on the uptake of specific nutrients These chapters were recruited and edited by Hamid M Said and Faye K Ghishan Collected in one set the most current and comprehensive coverage of gastrointestinal physiology Information presented in a style that is both readable and understandable Valuable to the specialized researcher the clinical gastroenterologist the teacher and the student Features an entirely new section on Immunology and Inflammation Each section edited by the preeminent scientist in the field

Inflammatory Bowel Disease L.R. Sutherland, S.M. Collins, F. Martin, R.S. McLeod, Stephan R. Targan, 2012-12-06 The inflammatory bowel diseases of unknown etiology and for which there are no cures continue to attract the attention and interest of gastroenterologists internists and surgeons International symposia are common and it is safe to say that there is at least one major symposium held somewhere in the world each year This book encompasses the proceedings of two recent symposia held in Victoria British Columbia Canada The symposia were the fifth and sixth international meetings focused on inflammatory bowel disease in Canada in the last eight years Once again they were sponsored by Axcan Pharma Inc formerly Interfalk Canada Inc and endorsed by the Canadian Association of Gastroenterology As has become traditional at such meetings the faculty was drawn from an international roster of leaders in the field of inflammatory bowel disease and gastroenterology The chapters of the proceedings provide a timely up to date review of the major issues including those

within the realm of basic science and others dealing with clinical problems The first symposium Basic Research and Clinical Implications was co-ordinated by John Wallace in association with Stephen Collins and Stephan Targan The themes of this section were organized under the general topics of predisposing factors genetics animal models infection permeability and immune deficits and the pathophysiology of intestinal inflammation The second symposium Trends in Therapy was organized by Lloyd Sutherland along with Francis Martin Robin McLeod and Noel Williams

Pathophysiology of the Enteric Nervous System Robin Spiller, David Grundy, 2008-04-15 Over the last few years there have been huge advances made in our understanding of the interactions between the brain and the gut the enteric nervous system This book is particularly relevant in the understanding diagnosis and management of irritable bowel syndrome the most common functional disorder of the bowel IBS has been diagnosed in 10-20% of adults in the US and symptoms of IBS are responsible for more than 3 million visits to the physician in the US This book is aimed at specialist gastroenterologists but also should be of interest for trainees and fellows in gastroenterology as well as PCPs and GPs with an interest in this subject

Understanding Crohn's Disease: Immunity, Genes and Microbes Amélia Sarmiento, Fernando Magro, Nair Campos, 2017-08-11 Crohn's disease CD is a chronic relapsing inflammatory bowel disease resulting in considerable morbidity and reduced quality of life Although still under intense debate CD seems to result from an enhanced and uncontrolled immune response to the gut microbiota CD is thought to be multifactorial depending on genetic and environmental determinants In recent years nearly 100 single nucleotide polymorphisms SNPs were associated with increased risk of developing CD some of the SNPs also associated with susceptibility to ulcerative colitis another type of IBD These SNPs are mostly located in genes involved in innate and adaptive immunity mechanisms such as autophagy expression of pattern recognition receptors and cytokine signaling Epigenetics is also probably playing a role in CD susceptibility as it is sensitive to environmental conditions and may mediate gene environment interactions Environmental factors possibly involved in CD development include diet gut microbiota composition and infection with specific pathogens of which the most consistently associated to CD are *Mycobacterium avium* subsp *paratuberculosis* and adherent invasive *Escherichia coli* This Topic aimed at bringing together contributions covering different genetic epigenetic immunological and microbial processes involved in the development of CD helping to drive forward the understanding of CD immunopathology
