EGF Receptor in Tumor Growth and Progression R.B. Lichtner,R.N. Harkins,2013-04-17 The last 15 years have brought an understanding of growth and differentiation at the molecular level expanding our knowledge of the origin and progression of cancer Early breakthroughs defining growth control pathways came via studies of oncogenes mutated signaling molecules that have lost the capacity to tum off their proliferative signal Oncogenes with diverse growth promoting activities have been discovered covering the gamut from cell surface to nuclear signaling Sequencing of these oncogenes revealed that they were mutated forms of captured cellular genes and displayed tyrosine kinase activity The epidermal growth factor EGF receptor was the first of 40 50 transmembrane tyrosine kinase receptors to be cloned and sequenced Beyond cell proliferation activation of EGF receptor by its specific ligands controls important physiological processes such as cell differentiation apoptosis cell migration and cell shape Activation of autocrine growth loops consisting in solid human tumors of upregulated expression of EGFR together with increased production of ligands suggested its crucial role in autonomous tumor growth

Progress in Oncology 2002 Vincent T. DeVita,Samuel Hellman,Steven A. Rosenberg,2003 The second volume in the annual series Progress In Oncology 2002 highlights progress in the basic and clinical aspects of oncology and is reviewed by leaders in the field Comprehensive reviews on important advances in the previous year are selected to help cancer research scientists and oncologists stay up to date with high impact progress across all disciplines in oncology

Breast Cancer Anne M. Bowcock,1999-01-11 A comprehensive state of the art summary of breast cancer research and treatment by leading authorities The book s many distinguished contributors illuminate the biology and genetics of breast cancer including what is known about the hereditary breast cancer genes BRCA1 and 2 the cutting edge cytogenic approaches and the biology of breast cancer metastasis In addition the authors describe current and future methods of breast cancer treatment in depth and discuss environment and diet as risk factors for

the disease Breast Cancer Molecular Genetics Pathogenesis and Therapeutics constitutes an excellent reference and resource for all those clinical and experimental oncologists as well as genetic counselors nurses who need to understand the latest developments in breast cancer biology risk and treatment [The EGF Receptor Family](#) Graham Carpenter,2004-02-06

The enormity of the literature on growth factors plus the breadth of the biological disciplines and technical expertise required prohibits a comprehensive review by even a multi disciplinary panel of authors To provide an alternative that is feasible for authors and digestible by readers this review compendium consists of a collection of articles each covering an aspect of the ErbB EGF field This compilation features articles on growth factor ligands neuregulins and individual receptors The second part of the book concentrates on the biological context of the ErbB receptors particularly in mammary development and in cancer It concludes with a discussion of the genetic systems that have enabled significant advances in research in this area **Biomedical Index to PHS-supported Research** ,1990 [The Nation's Progress in Cancer Research](#) National Cancer Institute (U.S.),2003 **Cell Biology and Translational Medicine, Volume 24** Kursad Turksen,2025-05-23 This volume in the Cell Biology and Translational Medicine series continues to explore the potential utility of stem cells in regenerative medicine Topics covered include various aspects of stem cells in regeneration both in health and cancer These include research into microenvironments signals exosomes biomaterials and their role in regeneration in general and in various types of cancer A goal of the series continues to be to highlight timely often emerging topics and novel approaches that can accelerate the utility of stem cells in regenerative medicine **Non-Small Cell Lung Cancer: New Insights for the Healthcare Professional: 2013 Edition** ,2013-07-22 Non Small Cell Lung Cancer New Insights for the Healthcare Professional 2013 Edition is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Diagnosis and Screening The editors have built Non Small Cell Lung Cancer New Insights for the Healthcare Professional 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about Diagnosis and Screening in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Non Small Cell Lung Cancer New Insights for the Healthcare Professional 2013 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com> **Index Medicus** ,2001 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings [Journal of the National Cancer Institute](#) ,1998-07 *Biomedical Index to PHS-supported Research: pt. pharmacologic therapies *Handbook of Cell Signaling, Three-Volume Set* Ralph A. Bradshaw, Edward A. Dennis, 2003-12-02 The Handbook of Cell Signaling is a comprehensive work covering all aspects of intracellular signal processing including extra intracellular membrane receptors signal transduction gene expression translation and cellular organotypic signal responses The subject matter has been divided into five main parts each of which is headed by a recognized expert in the field Initiation Extracellular and Membrane Events Transmission Effectors and Cytosolic Events Nuclear Responses Gene Expression and Translation Events in Intracellular Compartments Cell Cell and Cell Matrix Interactions Covered in extensive detail these areas will appeal to a broad cross disciplinary audience interested in the structure biochemistry molecular biology and pathology of cellular effectors Tabular and well illustrated the Handbook will serve as an in depth reference for this complex and evolving field Tabular and well illustrated the Handbook will serve as an in depth reference for this complex and evolving field Contains approximately 470 articles Provides well organized sections on each essential area in signaling Includes discussion on everything from ligand receptor interactions to organ organism responses Extremely user friendly **Progress in Bladder Cancer Research** A. M. Mallory, 2005 Bladder cancer is the fourth most common type of cancer in men and the eighth most common in women This book includes within its scope the prevention risk factors symptoms diagnosis treatment and rehabilitation of bladder cancer Leading edge scientific research from throughout the world is presented Ovarian Cancer M. Sharon Stack, David A. Fishman, 2009-09-18 Ovarian carcinoma continues to be responsible for more deaths than all other gynecologic malignancies combined due to a continued inability to achieve detection of early rather than advanced stage disease and the lack of effective tumor specific therapeutics Ovarian carcinogenesis invasion and metastatic dissemination require a complex cascade of interrelated genetic molecular and biochemical events that regulate the neoplastic transition of normal ovarian surface epithelium This updated second edition includes exciting new advances in ovarian cancer detection and treatment and provides an analysis of current research into aspects of malignant transformation growth control and metastasis A more detailed understanding of these processes may ultimately translate into the development of novel approaches for the detection and control of ovarian cancer

EGFR Signaling Networks in Cancer Therapy John D. Haley, William John Gullick, 2009-03-01 The epidermal growth factor EGF receptor and its downstream signal transduction networks have been implicated in the ontology and maintenance of tumor tissues which has motivated the discovery and development of molecularly targeted anti EGF receptor therapies Over decades of study the EGF receptor structure its ligand binding domains the physical biochemistry underlying its intrinsic tyrosine kinase catalytic function and the modular interactions with SH2 PTB and SH3 domain containing signaling adaptor p teins required for signal transduction have been extensively dissected Not only is the EGF receptor the nexus of many streams of information but it also forms one part of a calculating device by forming dimers and oligomers with the other three receptors in its family in response to at least eleven ligands some of which are expressed in multiple forms with

overlapping or quite distinct functions This phenomenon while recruiting to the inner surface of the cell membrane and activating multiple second messenger proteins also allows the possibility of cross talk between these systems permitting a further layer of information to be exchanged Less well described are the cross regulation of the EGF receptor and other anti apoptotic mitogenic and metabolic signaling systems The study of these systems has yielded new surprises One hurdle in these efforts has been that signal transduction pathways have frequently been defined in the generic absence of their tissue specific or cell interaction specific context Handbook of Growth Factors Enrique Pimentel, 1994-06-02 Volume II of Handbook of Growth Factors presents a stimulating discussion of the best characterized polypeptide growth factors including insulin insulin like growth factors epidermal growth factor fibroblast growth factors neurotrophic growth factors and transforming growth factors The structure and function of each growth factor is discussed as well as its receptor and postreceptor mechanism of action and its role in neoplastic processes Regulatory peptides with growth factor like properties such as bombesin angiotensin endothelin atrial natriuretic factor vasoactive intestinal peptide and bradykinin are examined in depth Factors related to the growth of organs such as the prostate the heart and the mammary gland are also covered

Immunotherapy, An Issue of Neurosurgery Clinics Isaac Yang, Michael J Lim, 2010-01-05 For this issue Dr Michael Lim of Johns Hopkins and Dr Isaac Yang of UCSF team up to deliver a packed issue on the latest developments in Immunotherapy The issue covers hot topics such as immunostimulants Passive Antibody Mediated Immunotherapy Clinical Applications of A Peptide Based Vaccine Challenges for Clinical Design of Immunotherapy Trials The EGFRv3 Peptide Vaccine Stem Cell Therapy and Dendritic Cell Vaccines Dendritic Glioma Fusion Vaccine Adoptive Cellular Immunotherapy Virus Mediated Immunotherapy and so much more
