The Growth-Oriented Economic Policy of the EU Angelo Santagostino, 2020-08-13 Growth is slow in the EU but growth potentialities remain high in spite of the exit of the UK and in spite of the COVID 19 pandemic and we can observe a disparity between reality and potentialities Does the persistent difference between expected and real benefits mean that the EU integration model is not working No It continues to be effective because it is rule based However these rules are not enough to grasp all the potentialities of integration We need a better integrated single European market and a more open trade policy in the framework of health security safety energy environment and labour standards establishing the rules of the competition but leaving the economic agents free to act The book explores Brexit capital markets energy health and bilateral trade policies with the main European partners in the light of their effects and contribution to European growth It emerges that this huge trade block is vital but must find the political capacity to move towards a closer integration to close the gap between reality and potentiality The text will appeal to a public interested in the economic problems of the EU and will be of interest to policy makers and all those who are involved in the process from proposals to decisions of making a more integrated Europe *Chinese Economy in Disequilibrium* Yining Li, 2013-11-25 Known internationally as Mr Shareholding economist Li Yining has had a transformative impact on China's economic transition most notably as an early advocate of ownership reform and in his promotion of shareholding theory By examining the interrelationship between the government enterprises and the market *Chinese Economy in Disequilibrium* presents an in depth discussion on the issues of resource allocation industrial structure institutional innovation and economic fluctuation in the current Chinese economy under the condition of disequilibrium Credited with developing the theory of economic disequilibrium Professor Li distinguishes two types of disequilibrium on the basis of whether or not the majority of firms in the economy are viable profit makers In

Chinese Economy in Disequilibrium Professor Li points out that not only has China's economy been in a state of disequilibrium but it also has issues with enterprises not being under budget constraint. Given the limitations of market regulation under economic disequilibrium, Professor Li advocates the reform of the enterprise system and upholds the government's leading role in the establishment of order in the socialist commodity economy. A number of measures are also proposed with the aim of facilitating the transition of China's economy from disequilibrium to equilibrium. The central theme is that the reform and transition are means to serve economic growth and social development which would eventually benefit the ordinary citizens in society.

Yining Li is a Professor of Economics and Emeritus Dean of Peking University's Guanghua School of Management. He is one of China's foremost economists and the author of twenty books and numerous articles on a wide range of economic subjects including reform and development in China. He has received a number of prestigious awards and honours for his research. As the leading proponent of a market economy in China, Professor Li has had a tremendous influence on China's economic reform policy over the last three decades. He has served on the Standing Committee of the National People's Congress of China and is currently Vice Chairman of the Economic Committee of the Chinese People's Political Consultative Conference.

Energy Abstracts for Policy Analysis, 1984-07 Modern Economic Regulation Christopher Decker, 2023-06-08 Economic regulation affects us all shaping how we access essential services such as water, energy and transport as well as how we communicate with one another in the digital world. Modern Economic Regulation describes the core insights of economic theory on which regulatory policies are based and connects this with evidence of how regulation is applied. It focuses on fundamental questions such as why are certain industries regulated? What principles can inform regulation? How is regulation implemented? Which regulatory policies have been more or less effective in practice? All chapters in this second edition are fully updated to reflect the latest research and evidence while five new chapters cover behavioural economics and the regulation of rail, aviation, payment systems and digital platforms. Each chapter contains discussion questions and topical case studies and online materials include over 60 applied exercises that explore real life regulatory problems from around the world.
