August-Wilhelm Scheer, 2012-12-06 The first edition of this book appeared in the Federal Republic of Germany in 1984 and in English translation as *Computer A Challenge for Business Administration* in 1985 This book which is a translation of the fourth German edition has been comprehensively revised As a result both the character and the expected audience of the book have changed which is reflected in the alteration to the title This book addresses itself to issues arising from the research areas of both information systems and computer science Computer science departments are primarily concerned with the development of EDP techniques and the business economics aspects remain largely Ignored The emphasis in information systems departments is placed on the investigation of the business economic impact of the use of already existing systems This strongly empirical approach is accompanied by a disinclination to consider actual system design this is considered the responsibility of the software houses This partitioning however leaves untapped the considerable potential which could be realized by an interdisciplinary approach from computer science and business economics An isolated approach neglects both the effects that business economics can have on the implementation of EDP techniques and the structural impact of EDP on business economics **Economics of Informatics.Procs.Int.Symp** A. opportunities to rethink at the broadest levels existing business strategies approaches and practices Over the past decade IT has opened up new business opportunities led to the development of new strategic IS and challenged all managers and users of ISIIT to devise new ways to make better use of information Yet this era which began with much confidence and optimism is now suffering under a legacy of systems that are increasingly failing to meet business needs and lasting fixes are proving costly and difficult to implement General management is experiencing a crisis of confidence in their IS functions and in the chief information systems officers who lead them Earl and Feeney 1994 11 The concern for chief executive officers is that they are confronting a situation that is seemingly out of control They are asking What is the best way to rein in these problems and effectively assess IS performance Further how can we be certain that IS is adequately adding value to the organisational bottom line On the other hand IS executives and professionals who are responsible for creating managing and maintaining the organisation s systems are worried about the preparedness of general managers to cope with the growth in new technologies and systems They see IT having a polarising effect on general managers it either bedazzles or frightens them Davenport 1994 119
