Theory of Markets Thin Tun, 1960 Concerned primarily with oligopoly this work includes a general study of pricing in three different markets perfect competition perfect monopoly and imperfect competition The solutions of these markets offered by Cournot Smithies Chamberlin Stackelberg Fellner and Robinson are presented mathematically followed by the author's own version of the theory of rational pricing in oligopoly Previous authors have not allowed for all the variables arising from profit and price situations in the market Here more realistic assumptions and more complex analyses indicate that sellers in oligopoly situations do not always need to arrange specific agreements hence that administered pricing does not inevitably occur when the market is dominated by a few producers

Economics in Antitrust Policy Mark Steiner, 2007 In the field of antitrust the freedoms to contract and compete can and do contradict Profit maximizing companies desire perfectly competitive input markets to minimize their costs but want monopolistic markets for their outputs to maximize their profits Consequently they have strong incentives to undermine competition in their output markets In a world without antitrust laws many companies would thus eliminate competition by using their freedom to contract either by entering into legally enforceable agreements which fix prices or divide up markets or by merging and acquiring rivals to gain market control Therefore guaranteeing and safeguarding companies abilities to compete comes at the cost of restricting their freedoms to contract The states role in this task is a delicate one though government intervention itself necessarily limits the economic freedom of individuals and firms and limiting the freedom of contract has potentially detrimental effects on economic activity as well Hence antitrust policy must find the right balance between the two freedoms of competition and contract allowing competition to flourish while upholding the contractual freedoms necessary for a functioning market The policies in the U S and Europe used to protect competition with per se rules setting clear boundaries for the freedom to contract where it interfered with the freedom to compete Over the past decades improvements in economic analysis provided measurable dimensions for competition through measures like efficiency and welfare With these new and complex economic tools the aim of an antitrust policy moved away from an indirect mechanism which provided and enforced a strict framework of negative per se rules within which the competitive process was allowed to happen The current policies directly aim at promoting welfare by attempting to balance the welfare effects of individual business practices permitting contracts or mergers with benign effects and prohibiting contracts with detrimental effects on welfare in potentially every case These economic insights have promoted a better understanding of the competitive process and contributed to improved antitrust rules However in the actual enforcement of antitrust laws recent developments caused by the influence of economic analysis have had a detrimental impact on antitrust policy in both the U S and the EU First it increased the discretion of competition authorities lowering legal certainty for companies and increasing the potential for wrong decisions Second it gave companies incentives to waste resources on rent seeking activities by using economic analyses to demonstrate efficiencies in complicated and timely investigations and litigation And third the predominant use of economic analysis has massively increased the costs of enforcement This thesis is the first one to depict these negative effects caused by recent developments
