*Evaluating and Monitoring the Health of Large-Scale Ecosystems* David J. Rapport, Connie L. Gaudet, Peter Calow, 2013-06-29 Ecosystem health offers a fresh perspective on the management of natural resources and the environment While some of the root concepts can surely be traced back to Aldo Leopold and even earlier it is only in the recent decade that a substantial body of work has emerged on this topic There is no question that a novel approach which is by its nature cross disciplinary bridging the health and biological sciences will initially raise a number of questions particularly pertaining to the use of metaphors and the validity of the analogy This volume however goes beyond merely the philosophical dimensions of the subject by covering a number of case studies which have given rise to the development of promising quantitative methods for diagnosis and rehabilitation of ecosystems under stress The focus of most studies is on regional ecosystems i e ecosystems of large scale As such the methods and approaches should have wide appeal to government agencies charged with the responsibility of sustainable development of regional ecosystems and natural

resources Health is one of those difficult concepts that everyone thinks they can define until they come to try We all have personal knowledge about health and illness and this makes the ecosystem analogy so potentially powerful Yet it is also clear that the uncritical application of the concept could lead to overly simplistic approaches to analysis and management of ecosystem health

**Riverine Ecosystem Management** Stefan Schmutz, Jan Sendzimir, 2018-05-08 This open access book surveys the frontier of scientific river research and provides examples to guide management towards a sustainable future of riverine ecosystems Principal structures and functions of the biogeosphere of rivers are explained key threats are identified and effective solutions for restoration and mitigation are provided Rivers are among the most threatened ecosystems of the world They increasingly suffer from pollution water abstraction river channelisation and damming Fundamental knowledge of ecosystem structure and function is necessary to understand how human activities interfere with natural processes and which interventions are feasible to rectify this Modern water legislation strives for sustainable water resource management and protection of important habitats and species However decision makers would benefit from more profound understanding of ecosystem degradation processes and of innovative methodologies and tools for efficient mitigation and restoration The book provides best practice examples of sustainable river management from on site studies European wide analyses and case studies from other parts of the world This book will be of interest to researchers in the field of aquatic ecology river system functioning conservation and restoration to postgraduate students to institutions involved in water management and to water related industries

**Human Influences on Forest Ecosystems** Edward A. Macie, L. Annie Hermansen, 2002 *Issues in Bioethics and the Concept of Scale* William Andrew Cook, 2008 Issues in Bioethics and the Concept of Scale arose from the author's deep and committed interest in ecology moral philosophy and medicine and how they are interrelated William A Cook expands on the

recognition that spatial and temporal scale characteristics are factors in the understanding and modeling of ecological systems and in decision making around ecological and environmental issues and introduces this dynamic to the field of bioethics The concept of scale from hierarchy theory as it is used in ecology to deal with the complexity and interrelationships of systems is explored and identified as a factor and potential source of conflict in the field of bioethics This notion of scale is conceptually useful for considering the complexity of some bioethical issues

**Footprints in the Jungle** Ian A. Bowles, Glenn T. Prickett, 2001-02-22 Tropical forests have seen a tremendous growth in logging mining and oil and gas development over the past decades These industries and their infrastructure including roads and power lines have a tremendous impact on the environment and often conflict with the growing concern for conservation particularly the conservation of tropical biodiversity However development in the tropics is extremely important economically both for developing and industrialized nations and Footprints in the Jungle is an invaluable reference in this important and highly politicized debate This volume looks at new approaches that lessen the impact of development It collects numerous case studies by project managers advocates and researchers from major international companies development agencies universities and non governmental organizations It also examines the environmental and social impact of resource development proposes a rigorous best practices approach and analyzes a number of challenging technical environmental social and legal issues

**General Technical Report RMRS** ,1998 Wildlife Resource Trends in the United States Curtis H. Flather, 1999 This report documents trends in wildlife resources for the nation as required by the Renewable Resources Planning Act RPA of 1974 The report focuses on recent historical trends in wildlife as one indicator of ecosystem health across the United States and updates wildlife trends presented in previous RPA Assessments The report also shows short and long term projections of some wildlife for documenting expected trajectories of resource change National trends in four attributes of wildlife resources including habitat population harvest and users set the context within which region specific trends are presented The data for this analysis came largely from information that currently exists within Forest Service and cooperating state and federal agency inventories The report concludes with a synthesis of these trends as they relate to the concept of resource health We highlight those trends that appear to indicate favorable uncertain or degraded resource conditions in an attempt to identify resource situations that warrant policy and management attention

**Handbook of Ecosystem Theories and Management** Felix Muller, 2000-02-10 As part of the Environmental and Ecological Modeling Handbooks series the Handbook of Ecosystem Theories and Management provides a comprehensive overview of ecosystem theory and the tools ecological engineering ecological modeling ecotoxicology and ecological economics to manage these systems The book is laid out to provide a summary or survey of each topic using many tables and figures Concepts definitions important findings basic hypotheses important correlations between theories and observation with illustrative graphs are included The comprehensive treatment of ecosystem theory and application of theoretical tools and the integration of

classical theory and real world examples sets this book apart It covers newly emerging topical areas as well as nontraditional topical areas i e chaos that will interest professionals trained in previous decades and enlighten those now entering into formal training The general approach taken by the authors makes this an essential reference and handbook for professionals and students

**Ecosystem-Based Adaptation** Noralene Uy,Rajib Shaw,2012-12-14 Ecosystems are often examined from a ecological perspective because of the importance of biodiversity and ecosystem services This book makes a case for ecosystem based adaptation by arguing that ecosystems and its services are critical in the climate change and disaster risk reduction fields

**Managing for Healthy Ecosystems** David J. Rapport,Bill L. Lasley,Dennis E. Rolston,N. Ole Nielsen,Calvin O. Qualset,Ardeshir B. Damania,2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population Based on a symposium on ecosystem health Managing for Healthy Ecosystems identifies key issues that must be resolved if there is to be progress in this complex area such as Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change agroecosystems restoration of forests politics culture and tradition Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide The more than 100 peer reviewed papers are grouped into three major parts The first Emerging Concepts explores the diverse meanings of ecosystem health within ecological socio economic and human health perspectives and the linkages to related concepts such as ecological integrity sustainable development and ecological footprints The second part Issues and Methods introduces methods for assessing and monitoring ecosystem health including strategies for gaining political and stakeholder input and support for science based ecosystem management The final part Case Studies reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems

**The Gulf of Guinea Large Marine Ecosystem** J.M. McGlade,P. Cury,K.A. Koranteng,N.J. Hardman-Mountford,2002-08-15 The Gulf of Guinea volume is part of a series on the Large Marine Ecosystems This volume combines the latest research on the Gulf of Guinea from scientists working primarily in the region and from Europe It covers the dynamics of the oceanic and coastal waters of the region the major biological resources pollution in the marine environment and the socio economics and governance of marine fisheries A significant number of new data sets including some which have been repatriated from outside the region are now made available through this publication The combination of the various chapters underlines the interlinkages that exist between the interannual and seasonal dynamical behaviour of the oceanic offshore waters and the living marine resources along the coast and the direct effect they have on the livelihoods of the populations living throughout the Gulf of Guinea The volume is intended for those who have a general interest in the region as well as those who work professionally in the field It will also be of immense value

to resource managers and policy makers as a demonstration project on how research can help solve the pressing problems of economic and food security in coastal regions
