## **Economic Issues In China:**

China's Economy Into the New Century John Wong, 2002 In the last two decades of the 20th century China stood out as the world's star performer in economic growth thanks to the market oriented reform that started in 1978 At the turn of the century the Chinese economy faces a series of challenges to sustain its growth and stability The two decade long rapid growth has effectively strengthened China's economic power and raised its people's standard of living It has also transformed China from a centrally planned command economy into a socialist market economy which operates increasingly in line with capitalist norms Major structural problems however remain and are growing acute Weakness in the fiscal system breeds rent seeking at the local level and causes tension in the state budget The flawed financial institutions and the biased ownership structure continue to distort resource allocation and cause huge efficiency losses Inter provincial and inter regional disparity is reaching a level that threatens national unity and social stability As China joins the World Trade Organization and becomes more integrated into the world economy it urgently needs to improve the domestic business environment and to beef up indigenous industries for foreign competition This volume is a collection of papers written by scholars at the East Asian Institute to address those problems during the period 1999-2001 The authors with their knowledge and experience in China studies provide in depth observations and professional analyses of some of the most important issues for the Chinese economy at the turn of the century Some of the observations and analyses lead to enlightening policy recommendations The solid scholarship combined with the policy orientation of these papers will appeal greatly to researchers in academia governments and other institutions The policy oriented and fact based analyses will also be of interest to practitioners in business including business consultants

**China's Currency: An Analysis of the Economic Issues** Wayne M. Morrison, 2008 This report summarizes China's economic issues and its currency manipulation intended to make its exports cheaper and imports into China more expensive than they would be under free market conditions

**China's Currency and Economic Issues** Wayne M. Morrison, Marc Labonte, Jonathan E. Sanford, 2006 China has a policy of pegging its currency the yuan to the U S dollar If the yuan is undervalued against the dollar there are likely to be both benefits and costs to the U S economy It would mean that imported Chinese goods are cheaper than they would be if

the yuan were market determined This lowers prices for U S consumers and diminishes inflationary pressures It also lowers prices for U S firms that use imported inputs such as parts in their production making such firms more competitive Critics of China s peg point to the large and growing U S trade deficit with China as evidence that the yuan is undervalued and harmful to the U S economy The relationship is more complex for a number of reasons First while China runs a large trade surplus with the United States it runs a significant trade deficit with the rest of the world Second an increasing level of Chinese exports are from foreign invested companies in China that have shifted production there to take advantage of China s abundant low cost labour Third the deficit masks the fact that China has become one of the fastest growing markets for U S exports total U S bilateral trade deficits in 2004 indicating that the overall trade deficit is not caused by the exchange rate policy of one country but rather the shortfall between U S saving and investment This book presents a coherent examination of the details behind China s currency policies as they relate to outside factors

China As A Leader Of The World Economy Gregory C Chow, 2011-10-06. After the 1978 Economic Reform, China's economic development has been on a fast track ever since. Later on, the successful accession into the WTO in 2001 accelerated China's economic transformation and made it more integrated with the world. Today, as the second largest economy in the world, China has earned herself a leading role on the world stage beyond dispute. This book provides readers with answers to why and how China functions as a leader in the world economy. This book surveys China's economy in four parts: economic institutions, economic problems, economic policies, and economic analyses. It is based on the author's latest findings from his scholarly research on China's economy, his involvement with China's economic reform and development, and his personal contacts with Chinese academics, entrepreneurs, government officials, and ordinary citizens for over thirty years. The book is written in a style accessible to the general readers, since most chapters are based on articles published in three major Chinese newspapers of which the author is a columnist. It can also serve as a reference book for professionals, an authoritative guide for general readers, and a supplementary text for university students. The author uses it as a supplementary text for his course on the Chinese economy at Princeton University.

*Problems In China's Transitional Economy: Property Rights And Transitional Models* Xiaobo Hu, 1998-08-15. 1997 saw a major reform in China which signaled the move away from its traditional economy when Jiang Zemin called off the debate on public versus private ownership. However, none of the existing theories can fully explain the transformation of the property rights system during the post-Mao reforms. The first part of this volume will reconceptualize the property rights reform in post-Mao China to provide a political economy explanation of why the transformation of property rights in China appears piecemeal. The success of the post-Mao reforms can be attributed to China's ability to integrate the experience of a variety of transition models. The second part of the paper investigates two distinct transition models in light of the lessons from current Vietnamese reform. It explores the dynamics of political actions and analyzes the political reasons for economic reform.
